Everyone is sick of moronic posts like this so spare us please.

If you want to be a cop then go to Police academy and do it.

If not shut up and let those of us who have a life live it and leave us alone.

Steve

Betcha Davie smokes Virginia Slims.
Oh brother. Now Twisty's on a Dave Hall kick again....

>He loves me, what can I say?

Not in the same manner you love illegally listening to minor girls talk
about sex. In fact, that self-professed claim you made would qualify
you, to many,, as a pedophile. Need to see your own post again? Davie,
just so there is no doubt about the type situations that give you
"pleasure" , I can re-post how "juicy" (YOUR word) you felt
listening to the sex talk of minors.
See, I merely give back what you stir up, Davie, If you would have
minded your own business and not allowed your personal feelings to
dictate your childish harassment, you wouldnt be crying the pedophilia
blues. You are beside yourself with lies, and I'm waiting for you to
begin to deny directing posts toward myself over the past three
weeks,,see, as always,you goofed and messed up,,I just need you to deny
the actions a few more times..

>I guess all of the

>psychological evaluation hit home, just a little

>too close for him. I guess he wants more. But I

>'m not playing any more. There's nothing in it

Speaking of splatter, somebody should smack the shit out of you.....It
was a simple question you had to change into some personal gripe you have
with how others use their radios.

The "A" channels were and are still used as remote control frequencies for
RC cars and boats for the most part. They were not intended for plane use.

establish email comm with HQ asap. the eagle has landed.

_
Your addy matches the same 64.12 IP that forged me and wrote "Respect
for Freebanders". This email addy your are using now has two separate
points of origination...the one you are using now, where you have forged
me (64.12) and the 152.163 addy that posted the forge "I am outlaw CB
Genius".
Never have I seen your ego at all time low like it is now. Feeling bad
about yourself is a terrible thing...maybe you should turn off the cb
and get some fresh air,.come back when you are happy with yourself and
not interested in assuming another's identity......LOL.

_
I see you are back to the 64,12 addy again, the one where you wrote
"Respect for Freebanders" and forged my email to it. Switch hitting
between the 152 addy and the 64........ HAhah..that isn't an "Eagle"
that landed,,.............that's CROW and it's being force-fed to
you...HARDEEHARR!..LOL!

_
>64.12? 152.163?

Yes.

>You don't know the first thing about headers,

>dopey.

Perhaps not. But one merely needs to check the forges,,the numbers match
perfectly...perfectly, I say :).

> Those partial numbers you are waving

>around like a trophy

Only I wave nothing. The numbers in their entirety are attached to the forges and match your incompetence..I merely pointed it out and you began to menstruate. Couple that with the sudden change of the IP number afer I called attention to it.....and it appears I know exactly what I speak of. As usual, yourself has the problem.

>match Tim Nebo, GW, and a slew of other

>people.

Perhaps..but the complete IP numbers are to be found only under the forges and from the stated points of malice. Plug the exact numbers found on the forges through Sam Spade and share with the masses your findings..LOL.l

>Go sniff your jock strap and be quiet.

Censorship will not work. It illustrates your failure, Geogre's failure, N8's failure, Gillinad's failure, Kc8LDO's failure, and N3CVJ's failure as hammies and illustrates your success at being angry lids, along with your juvenile pot shots.,,,LOL..you're mighty upset, again. Remove your ego from the platter and begin anew. Oh, and try to grow up a tad and not allow me to be your appointed deity all your life...LOL. I can understand if all you hear is "twisted" in your hypcoritical freebanding endeavors.....the induced paranoia that keeps you from keying up as frequently as you used to on illegal frequencies is reward plenty,,,LOL! Hahaha!

_
What is "Barely" legal? It's either legal or not,,,,"barely legal" is like a a"little bit" pregnant and illustrates the biases you can barely contain...you appear jealous as hell, nothing more.

>If the clown-shoe fits....

LOL..Touche!!!!
  For an example of what you profess to be a "clown-shoe", one needs look no further than an N3CVJ post where he claimed illegally listening to teenage girls telephone conversations about sex provides him with "juicy" entertainment. What a freak!! He shouldn't be allowed within 50 yards of a minor!! Seems this guy you refer to was Mr. Rogers compared to Davie Hall,,,,this guy wasn't breaking the law at all, Davie was. This guy just drew out your jealousy. This guy was messing with adults, as per your claim. Davie was messing around with minors, claiming it provided him with a "juicy" pleasure. Need to see his post, frankie? Go ahead and comment on Davie's preferred and self-stated predilection of

finding juicy "pleasure" in the sex talk of minors. Take your angry biased ass home and soak your head. LOL. If you;re looking for someone to bash over minors, bash Davie,,he's right here and you don;t have to seek him out..besides,,as was stated, the guy's behavior you took offense with was legal,,Davie is not. Figures you would have a problem with the legal dude and go to bat for Davie and his entertainment derived through the disgusting paractice of illegal monitoring minor girls telehone calls. Perhaps you have more in common with Davie than originally thought. What else would explain you taking issue with a legal act and giving Hall a pass when he talks of such demented, disgusting, preverted acts.

thing, what are the "A" channels for?

_
>Illegal inbetweens. Using them causes splatter
>to those on legal channels.

Total bullshit. This clown has no clue concerning radio theory,
especially where 27 MHZ is concerned relating to cb and HF.
Speaking on, say, 26.995, will cause no more "splatter" than speaking
on any other "legal" frequency. Same with the "off" channels. If your
radio is not causing a splatter or bleed problem on the regular
channels, the freeband channels will not cause or increase "splatter" in
any manner whatsoever. The above cb voo-doo claim was
made,,,well,,merely look at the posting access and email.....LOL.

_
Here is a link to a frequency table which
includes the Pro Star 400.

You got a good point there Bill. There are alot of guys like that in
my hometown. No social grace, arrogant for no good reason, and
derive all of their self worth from their radio. I however am not one
of them. I am just a guy that likes to talk DX to my friends in
California and the rest of the country, and I love the occasional
radio battle. To do this I need a big radio.

I dont have a wall full of junk radios, I have no desire to get
"licensed", I dont pass judgement on what others do with their
radio's, I sure as hell dont act like a big man because I can do a
kw.

Whatever sterotypes you have about "key-clowns" may be somewhat
justified Bill. But make sure you dont apply that to everyone. And
from reading your previous posts I think you have more of your listed
"Key-clown" traits than most of the people on this board.

WHoa! They added the D since I last checked bama.

What's a .djvu file? what app do I need to open this?

Thanks for the pointer. I REALLY appreciate it.

Of course, in the meanwhile, I've also gotten a line on an old,
broken, IC-751 which (I think) needs a new voltage regulator in the
power supply.. Not a HUGE cost to fix.. so I'll have a 706Mk][G, a
718, a 751, and the Swan 350D...Hey, it sounds to me like I've got the
beginnings of a nice HAM shack.

Thanks again for the pointer... Now if only I can open the file.

Thanks for reading this posting.
I'm looking for a junk SBE SidebanderII for parts. If the front panel and
the S-meter are still in good condition I'm interested
SBE microphone is another item I'm in need for

Let me know!

A search engine would get him to BAMA, 6mt and a couple other sites, all of which are useful for anyone that owns a Swan. And guess what -- they are all linked to each other! Not only that, but variations of the same model number aren't so different that the schematic of one is worthless for another.

So kiss my ass.

Hello,

I need to learn and have some basics at hand. I am trying to write code for classifying raw signal data into Marks and spaces and the like. I am also trying to extract encoding info from raw data bits and many more things. I am stumped...at this point.

What i am lacking here is basic signal knowledge. Can you please suggest some basic book for understangin signals, modulation, marks and spaces, formulae or methods to determine if a stream of raw bits indicate the presence of a carrier signal etc?

Thank you.
Ishi

Doc,
He was 5 miles from the repeater. I was around 100 miles from the repeater. I also opened (and tried a quick call) over a repeater in Pennsylvania. This was from Rochester, NY (almost at Lake Ontario). In other words, I was transmitting successfully to another repeater in another state(and that one was *well* over 100 miles away) :)

BTW, two folks could well be on opposite sides of the repeater. Should the other guy happen to have a high elevation (as did I), then communications approaching 200 miles between the HTs (100 miles to the repeater plus another 100 miles to the other guy) are possible (but only in *unusual* circumstances). My former neighbor lives on a 2200 foot "hill" and I am certain she would have one heck of a range. I am only considering the range I can obtain to a repeater. Granted, the repeater antenna gain is pretty high, but it would likely not be more than 10 dB over my 36 inch gain antenna. So, between similar HTs, cut the distance 1/3 (1/9th the power) and I'd still expect well over 30 miles (and not need as much height, but still both would have to be located fairly high above average terrain). Simple math, as long as you've got a clear shot. The satellites are not running kilowatts either, you know :)

Doc,

Normally, HTs will be limited to line of sight. The problem is that normal line of sight is only about 3 miles to radio horizon for a person standing on level ground. Get up on a ladder, and the horizon stretches out farther. We're not talking propagation enhancements, just a simple formula which takes the station's height above average terrain (in feet), double that and take the square root. The answer is the range to radio horizon. 5 feet (to a handheld antenna) times two is 10. SQR(10) is a bit over 3 miles. 6 or 7 miles max. Get in the second story of a house. Figure 11 feet (up a few feet to the first floor, another 8 or so to the second floor) and add that 5 feet from that floor to the HT. Now 16 doubled is 32. The square root of that is somewhat over 5. I would suspect a range of 10 to 12 miles between two handhelds equally elevated over average terrain in that case. I was on the 21st or 22nd floor of a high rise. Figure over 200 feet up, plus 600 feet above average terrain (yes, it was on a hill). 800 feet and I won't add the extra 5 feet. SQR(1600) yields 40 miles to radio horizon. Now figure in the repeater height. Should that repeater be up a total of 2000 feet (including hill, tower, antenna, whatever), it will have a range over 60 miles to its' horizon. As long as my horizon intersects its' horizon with no obstruction, I can use that repeater. The 3.5 watts on my HT is not a problem; my antenna gain is around 6 dBi and I'm sure the repeater antenna gain is way over 10 dBi. Plenty of power. I'm talking 24/7 communications. I've had a few chats over (and can raise at any time of day) the Toronto repeater. Definitely more than a couple of miles. Way more than a couple of dozen miles too :)

This is a nice information package which contains information to make basic reciever, transmitter,modulation and frequency adjustments, as well as mike repairs. All adjustments except those related to frequency can easily be made without any expensive special equipment. Usually all you need is the S/RF meter on the radio itself, a "dummy load", and possibly another CB or walkie-talkie tuned to the same channel. This information package is intended to help the technician to maintain the CB radio in peak condition, and to restore a modified radio to proper operating condition by understanding how many of the more common modifications are made. This package has in depth information on the Realistic TRC-451 and the Cobra 19GTL plus other radios. Includes schematics, parts lists, calibration settings and reports on the above mentioned radios. This is a must information package for any CB hobbyist to have in his or her shack. Click below for more information.....

There are no "freeband channels" except in your mind.

> will not cause or increase "splatter" in
> any manner whatsoever. The above cb voo-doo claim was
> made,,,well,,merely look at the posting access and email.....LOL.

Come back from cloud-cukoo-land. Those frequencies are not authorized
for voice comms, therefore they can cause interference to legal users
on adjacent channels. Better to operate legally and considerately.

> Here is a link to a frequency table which
> includes the Pro Star 400.

Alan Lansburger didn't know where the ham bands begin and end. There
are probably others that don't know. Why discourage the free flow of
accurate information? I thought you were against censorship, Twisty?

Source record: 162889

Jim,
I understand about finding the 'radio horizon' and
how height will affect it. That isn't what was in
question, though.
The original question dealt with the relative range
of two FRS handy-talkies, which was stipulated as 3 miles.
That 3 miles is a product of both 'line of sight' ~and~
the output power of the radio. Since both radios have
a range of 3 miles, both radios must be within that 3 mile
limit to hear and talk to each other, not 6 miles as you
stated.
'Doc

Alan,
It sounds like you're talking about a CTCSS, or
'tone squelch' accessory. If so, then, no, it doesn't
do anything with range or signal strength. It's just
a way of turning off reception of any signal that doesn't
have the 'tone', sort of like having a private line instead
of a party line with telephones. The tone is like a 'key'
that will open the 'door' to another radio that's using a
'tone squelch' so they don't have to listen to everything
else on a channel.
'Doc

Sorry this is a cb newsgroup the knowledge here is limited to making
radios go out of band or rf amplifiers.

Alan Lansburger wrote in message ...
>What is the purpose or what does a tone does in a radio?

Do you mean the CTCSS tone?
This is like a squelch. It cuts out the sound until someone transmits with the same tone on their system.

> Can an export radio (10m converted) be installed a tone?

You could fit CTCSS on any radio, including CBs.

> I saw a 10 m hand held, with a 88mhz tone.

Do you mean 88Hz... 88MHz is not quite a "tone".

> Does this helps with reach and transmission to another
> radio which has the tone?

It will not improve distance or received sound in any way. All it does is keep your speaker quiet until the correct person transmits. Unlike a normal squelch, it is not opened up by any signal above a set strength, it only opens if the correct tone is received.
The tone transmitted is a low frequency audio signal. The level of this tone is low enough, so that you will not hear it, but it can still be picked up by the internal circuits.

This is really intended for services where a frequency is shared by several people or groups, each of whom wish to use their system privately without the others bothering them. While it could be fitted on CB, it would just defeat the object of CB - a "community" type system where anyone can talk to anyone.

Regards,

Peter.

What do you mean, "until it opens"? is there a switch to open the tone
continually? Can the tone be used on a specific channel or it has to work
across the board?, but can it be installed on a cb radio?

especially where 27 MHZ is concerned relating to cb and HF.
  Speaking on, say, 26.995, will cause no more "splatter" than
speaking on any other "legal" frequency.
Same with the "off" channels. If your
radio is not causing a splatter or bleed problem on the regular
channels, the freeband channels

>There are no "freeband channels" except in

>your mind.

There are a myriad of freeband channels. Delusions and wishing and
denial will not make them any less real.

_
the freeband channels will not cause or increase "splatter" in
any manner whatsoever. The above cb voo-doo claim was
made,,,well,,merely look at the posting access and email.....LOL.

>Come back from cloud-cukoo-land.

Try and make an honest claim.

>Those frequencies are not authorized for voice
>comms, therefore they can cause interference

>to legal users on adjacent channels.

Really? Kindly explain to the masses how operating on 26.995 or 22a
"causes" more splatter than the legal channels.....go on now,,,,we're
all ears.

>Better to operate legally and considerately.

You don't act considerably in here,,,you act just like what you profess
to be against on the air.....your choice of which medium you should obey
rules and act "considerate" is hypocritical.

Clean your own backyard prior to telling others how to operate.

_
(Here is a link to a frequency table which includes the Pro Star 400.

Did you notice the radios listed in that book are over 20 years old?
They need real techs by now, not a screwdriver wizard. I'd like to
see him fix up the TRC-451 I've got using that book. He'd have to
buy the radio from me first, 'cause it won't be usable when I get
it back!!! Let's see, no AM modulation, VR10 makes no difference.
RX audio starts to "tear". Need to turn radio off & on to fix. It
has a great receive, beats my PC-122, but the 122 works on AM, &
the audio doesn't "tear" (pronounced like "tare"), but needs a
preamp to hear stuff far away. Too much LO, perhaps?

It's a mute point, CB has so much f-ing noise and skip. I barely
turn it on for more then a minute. No need to. All the locals
went ham. Nice and clear on 2 meter simplex, no skip, bleedover
or DaveMade AH's to deal with. The ones here are assholes. All
that power must turn their brain to jello.

I would like to be able to use my CB again if mother nature ever
sends the Mexicans back home. The Senorita says 2 words with an
off frequency radio that drifts when she keys, and has a roger
beep. Listen to that for a few minutes. Then there's the Latino
with a humming power supply that's awful to hear with a BFO on it...

However, I won't touch Echolink. IRLP is an RF only input.

You know perfectly well what adjacent channel interference means,
but you have put on your clown suit and begun feigning ignorance,
sensing an opportunity to misinterpret and play word games. On the
next post you'll try and shift the focus to some unrelated topic, like
Dave Hall, or latchkey kids or Marine Corps retirement policy. And
since you still don't know how to quote, the thread will eventually
look like alphabet soup with no way to tell who said what. All this
fuss because you must defend the concept of not following the rules.
Wouldn't it be simpler to operate legally?

: Frank Gilliland <sparky@nospamaimcomm.net> wrote:
: SSB has the same audio bandwidth as AM, but SSB has less noise. For fidelity,
: SSB has AM beat.

I and others would probably disagree. But to each his own. My AM bandwidth is not the same as my SSB bandwidth. For the
most part, regular AM bandwidth is wider than SSB.

:> Add that with the clarifier knob requirement of SSB
:>round table group chat and AM remains popular.

: I haven't had to move my clarifier in quite a while, mainly because most of the
: people I talk to are using radios that haven't been modified.

No two unmodified radios are on the same exact frequency. Given a group of stock radios, some will be either side of
the assumed channel center.

: Duty cycle is the ratio of transmit time to receive time. Modulation percentage
: doesn't use receive time as a factor.

It's more than than just Tx and Rx times...

: Power microphones, audio processors, modulation limiters... things that change
: the peak-to-average modulation ratio... all will be discussed soon.

Opinions will vary quite a bit...

:>: ...."units"?
:>
:>Yep, when no specific description is used, units work very well. Kind of
:>like the unit circle often described in mathematics "with a radius of 1."
:>Should be rather intuitive to most people...

: You might have said that the carrier power is the base unit.

But I did not...

:>:>Many of these rec radio cb technical posts fail to mention the source of
:>:>the additional power which is furnished by the modulator.
:>: I didn't. Read my post again.
:>
:>No one said you did... though as stated "many" people have.
: Then how is it relevant to this discussion?

You want to get the information out... might as well lay the proper foundation.

:>:>Most people prefer to trade the "wasted power" for the simplicity of AM
:>:>operation. Kind of the SUV of radio thing... just lacking the dam cell

:>:>phone planted in your ear as you drive along.
:>
:>: And I prefer to believe that "most people" are uneducated as to the
:>: benefits of SSB, which is why I wrote that post.
:>
:>Many people have SSB mode and prefer the simplicity of AM operation. "Life
:>is box of chocolatte." Sometimes the technical candy is a hard chew.

: I didn't say they are Gumps, I said they are uneducated about the benefits of
: SSB. And I should rephrase that: "Many CBers are UNDER-educated about the
: benefits of SSB."

No one mentioned Forest Gumps... just playing devils advocate, one should compare the benefits with the trade offs.

: No, they aren't similar at all, because I have never heard of a detection scheme
: where the "voltages of the two sidebands are added in the detector". Care to
: reference that one?

sure:
http://dj4br.virtualave.net/ssb3e.htm

: Time for another lesson: You can look at AM in two ways. One way is in the
: frequency domain, with a carrier of constant amplitude and the modulation
: carried in the sidebands. The other way is in the amplitude domain, in which the
: carrier varies in amplitude according to the modulation (which is where the term
: "Amplitude Modulation" originated). Envelope detection works in the amplitude
: domain by passing the rectified RF or IF signal through a low-pass filter. And
: in case you didn't notice, a diode detector blocks half the modulation power!

Depends on the detector type... there are more than single diode detectors, even for AM operation.

: All right, if you really want:

:>These values represent the same noise power level per kc of bandwidth,
:>that is, 0.12 divided by 6 is equal to 0.072 divided by 3.

: Where did you get the values of 0.12 and 0.072? Regardless,

: 0.12 / 6 = 0.02
: 0.072 / 3 = 0.024
: 0.02 <> 0.024

http://dj4br.virtualave.net/ssb3e.htm

:> The s/n ratio
:>for the AM system is 20 log s/n in terms of voltage, or 20 dB. For the
:>SSB system the s/n ratio is also 20 dB.

: Again, where did you get your values of 0.12 and 0.072?

http://dj4br.virtualave.net/ssb3e.htm

: Time for ANOTHER lesson: The intelligibility of an audio signal is defined by
: the signal-to-noise ratio of the audio, which is done by measuring the POWER of
: the signal and noise, NOT just their voltage. Why? Because sound requires POWER.
: Simple, huh? Also, when determining the S/N ratio at the RF input of a receiver,
: the signal and noise are measured as VOLTAGE because the input impedance is
: common to both.

http://dj4br.virtualave.net/ssb3e.htm

:> Therefore the 0.5 power unit of
:>rated PEP for the SSB transmitter produces the same signal
:>intelligibility as the 1 power unit of rated carrier power for the AM
:>transmitter .

: Your "1 power unit of rated carrier power" doesn't carry any intelligence. But I
: know what you are trying to say, and you're still wrong. Your detection-adder
: scheme doesn't work here because, even if such a detector existed, the RF noise
: would be detected by the same process, negating the effect you are claiming
: actually occurs.

http://dj4br.virtualave.net/ssb3e.htm

:>In summary it can be stated that, under ideal propagating conditions but
:>in the presence of broadband noise,

: ...which is a contradition in terms...

http://dj4br.virtualave.net/ssb3e.htm

:> an SSB signal and an AM signal provide
:>equal s/n ratios at the receiver if the total sideband power contained in
:>each of the signals is equal.

: Only with your sideband-adding detector.

:> This means that, to perform under these
:>conditions as well as an SSB transmitter of given PEP rating, an AM
:>transmitter requires twice that figure in carrier power rating.

: Even if that were true (and it isn't), SSB is still more efficient than AM.

No one disputes SSB being more efficient, just less practical for the average real world CB radio operator.
http://dj4br.virtualave.net/ssb3e.htm

:>Also notice the example has values worked through to demonstrate the
:>signal intelligibility. Are any of those values or the end result
:>summary wrong Frank..?

: Your values are not "worked through". It's like you pulled them out of thin air.
: Where did you get your values of 0.12 and 0.072?

http://dj4br.virtualave.net/ssb3e.htm

:>The desciption and the summary are accurate.
:>

:>How about you plugging in a similar example and going through it here on
:>the news group.

: How about you learning the concepts before making invalid examples? How about
: assigning proper labels to your arbitrary values instead of generic "units"? How
: about not skipping steps to hide your mathematical mistakes?

http://dj4br.virtualave.net/ssb3e.htm

:>: Overmodulation is next week's lesson.
:>
:>Let's get this one done first...

: As far as I'm concerned, it's done. The only problem here is that you don't
: fully understand the concepts involved. Demonstrate that you have learned
: something and I'll move on.

http://dj4br.virtualave.net/ssb3e.htm

I like the example description shown, have a look and get back to us with
what ever gets your motor sideways... you might also cc the author if you
have specific questions about his statements.

That's the mind-set many cb DXers take when approached by hammies who sing the virtues of their service (hammie radio) by attempting to compare it to a service (cb) that is totally different in an attempt to elevate their own status. Otherwise, there is no comparison at all. Many LIKE the DX,,,LOVE the DX on 11 meter, and the only reason some are into cb is for HF DX. Talking everyday with the help of repeaters quickly takes the fun out of long distance communications, for many HF DX enthusiasts, and many simply do not give a damn about hammie radio. CBers, collectively, do not tend to mention or concern themselves with hammie radio. Wonder why the opposite doesn't hold true? Nevertheless, it's good you found a medium of communication that lends you what you have been missing on cb. For many others, cb is it,,,there is no interest in hammie radio. Some intellectually-challenged folks have a problem with this and feel since one is not interested in hammie radio, one is somehow "beneath" those who who are. THAT'S really gonna add to the hammie numbers....can't help but howl at those who share that view.

Depending on the TRC unit you own, either 22 or 39 other channels are available. Between this and a beam, there are many avenues of escape. When the aggravation factor sets in concerning what one hears on the air, no matter what service one uses, it's time to shut it off.

CTCSS (same as Motorola's 'PL') has the xmtr send a subaudible tone.
The receiving radio will not break squelch unless the CTCSS tone is heard.
You can search on the terms above for more info.

: I need to learn and have some basics at hand. I am trying to write
: code for classifying raw signal data into Marks and spaces and the
: like. I am also trying to extract encoding info from raw data bits and
: many more things. I am stumped...at this point.

You would do well to research code for "teletype" and cw morse decoding.
That would pretty much get you going in the right direction.

You might also research "autobaud" routines, rs232 related and similar.
There's a lot out on the web...

References for small board micro processors are a great help... you might
research the 8051, 8052 and pic controller chips.

Namaste...

Now, does that mean that there will be silence in the channel until the tone is heard, and does it work for the entire radio at once, or just for a specific channel?

This and a broken Lafayette LMS-40 were picked up broken for $10
my years ago. The Lafayette is a 9.5. The TRC is weathered
badly enough for green corrosion to show on the front. A few screws
had to be drilled out when I got it. When I get the bugs out of it
(someday, it's not too important to me), I'll take it to the local
tech that fixes anything (State Police radio tech) for a complete
factory alignment. It's not worth his going rate to fix it. Besides,
I need that experience!!!

Skip will die down, some year. My CB will get more use. Right now,
it's pretty useless for local talking. Skip has gotten boring over
the past 26 years. Same noise, different screamer. <:

The only 23 channel radio I have is a Regency Range Gain. Mid 60's
tube model, crystal synth mixing. It's about a 6 or 7. Original mike!

I turn my CB on when I'm out. It only takes a minute before some
Mexican or trucker or bleedover turns my receive to trash. CLICK.
I try again 10 or 20 minutes later. Repeat cycle, ad nausium,

BTW, if I change channel, how will we find each other besides
2 meter simplex?

Alan,

If you set your radio to not receive the tone, then it will open up every time someone transmits on that frequency (assuming that the received signal is significant - say over 1/2 uV). The PL tones are used for amateur repeaters to avoid mutual interference and also in FRS and MURS so you don't have to listen to every conversation that is going on. You can set the transmit tone to enable an amateur repeater or your family's HTs or base units (such as FRS or MURS) so they won't have to listen to every conversation but they will hear you. It is sort of like having a 'block sender' list on your radio. If you have no rules (tone), then you hear everything; otherwise, you only hear the transmissions you wish to hear. Usually, modern transceivers (whether HTs, mobile, or base), have the option of storing different memory channels - each of which can be set independently of the others (different tones, or no tones). While it isn't rocket science, it took me a while to figure out what I needed :) Don't feel bad; it took me a week to sort the stuff out and set the #$)*# channels the way I wanted them. ;)

Twist,

Your comment to Scott about the 'holier than thou' is well taken. Now, I'll put you in your place concerning tuning up a radio. I turn on the entertainment center, punch up 91.3, and there is WGMC - nice jazz station - presto, I'm tuned up. For those who don't understand, go to rec.radio.amateur.policy or rec.radio.amateur.misc. Oh well, hope the fishing is going well for ya! ;)

Why is it that so many folks just can't seem to get along or at least leave others alone? Oh well ...

73 from Rochester, NY
Jim
ps - if you need further info on tuning a radio, just let me know heheheeeee ...
BTW, I will stick up for Scott. The dude is helping others. Really. Not everyone is as one sided as some of the folks I (or you) refer to. Unfortunately, a few *idiots* on one side or the other of the 'fence' give bad names to the rest. Tickle easy!

Anyone using this 5/8 wave type antenna? It used to be the 1600 and now it seems they have 2 versions. The NBS 2010 and the Army Big Stick which is painted camo green. Is the green color the only difference? I heard that the composites and the manufacturing on it are better than the A99 and the IMax 2000. Can you offer any advice on this antenna? I would like to buy it for my cb base station Cobra 29 LTD peaked and tuned very well with a hand held D 104 power mike. Thanks

i have a few years old cobra 29 ltd st
with a few problems
im trying to fix them myself
as ive had some luck in repairing video games.....my other hobby
recently got the 29 upand running,,it had no sound
from external or internal speaker
turned out to be bad solder joints,,reflowed,,all is well
remaining problems
built in swr meter doesnt move on swr or cal setting,,,no movement at all
any ideas what to check,,wires are attached
meter works on rf
my biggest concern is its ears
it really hears for crap
i prefer not to use sound tracker feature
so with st off,,,and squelch out the noise
i hear folks right in front of me talking to folks i cant hear
granted i can hear them for a mile or so
but it irritates me that others are talking to folks i cant hear
unless i put up with the noise
if i dial back the rf gain to cut the noise
again i cant hear these folks
keep in mind,,they are breaking squelch on others radio's around me
it had this problem in the last truck it was in as well
and the attenna's we use are all the same
company trucks,,with company supplied coax and sticks
so im assuming this isnt the problem
any mods or adjustments can be made
to help it to hear better
and if anyone has the schematic scanned for the sound tracker model
id greatly appreciate it
thanks in advance
don

Lets face it , if there was a GOOD CB built, Not the Uniden,cobra, or any of the other crap on the market as of now , there would not be any reason for any Tweak or Peak.
Most AMers Like to be LOUD, and SWING.
Put in a mic circuit like is used in FM equiment (a audio clipper,and low pass filter) feeding to a modulation adjustment, it will sound LOUD, without needing audio compressors as used in all CBs today that techs cut out causing overmodulation.

Alan,
Yes, it means that you will hear nothing unless the sending station is using the tone. Specifically how the thing will work, single channel or all of them, depends on how elaborate the 'tone board' is, how much you want to spend on it, and how you set it up. Normally, it's "all or nothing", either "on, or off". Unless you have a definite reason for remotely controling some function it's just an extra cost option that serves no purpose.
'Doc

Out of the three antennas you listed, the NBS 2010 is the best built.

The ABS 1600 (green) has been discontinued and replaced by the NBS 2010. I would actually like to buy an ABS 1600 new in the box but have been unable to find one.

You will need some good coax too. Get Times Microwave LMR-400 or CableXperts 1318. Do a search on Google to find the website for CableXperts.

There's nothing wrong with the performance of most CB radios built today. There are a couple that have issues with the receiver, but vast majority work just fine for their intended purpose.

> Most AMers Like to be LOUD, and SWING.

If you prefer screaming instead of communicating then you probably picked the wrong hobby. If you check your favorite search engine you can probably find a yelling contest in just about every redneck mudhole in the US, so I'm sure there is one near you. And if watching a little red needle bounce around to your voice gives you so much personal satisfaction that you turn it into a hobby, then perhaps you should seek a mental health professional that's experienced in Freudian analysis.

Like most keyclowns you have no idea what you are talking about. Those "techs" usually cut out the very same thing you want to add -- the audio clipper and low-pass filter -- commonly referred to as the 'limiter'. The result is "LOUD" because it's overmodulating and splattering into other channels. Get a clue.

What's the matter? YOU can't answer the question in a friendly
manner. Is that why you consider this group unfriendly? Because
YOU can't be friendly?

A "crossed" beam is either a quad or a yagi with both horizontal
and vertical elements. A quad has vertical and horizontal insulated
spreaders to hold a wire loop around the perimeter. A quad has
slightly more gain than a yagi type. Yagi elements are around 18
feet long. Quad spreader lengths are around 12.5 feet long.
With all beam antennas the primary factor for gain is boom length,
not the number of elements. Most omni antennas are vertically
polarized, so if you purchase a beam and want to talk to omnis then
you should make sure you beam has vertical polarization.

Try these links.

Sure. Thery're the ones which were the most popular with experimenters,
and are by far, the easiest to modify.

Any radio which is 20 years old or more, and has "strange" problems like
you're describing, needs to be aware of drying electrolytic capacitors.
They are the bane of most older radios.

You forgot the echo boxes.

But don't fret. The sunspots are on the decline now. I've been hearing
an increased local presence again, now that the skip is pretty much dead

at night now, except during strange weather fronts.

>"TRC" as in "Radio Shack"?

_
Hmm...I have been under the impression the older rat shacks models are
some of the easiest to tune, mod, peak, repair,,,whatever...perhaps I'm
just lucky and my techs are all super techs.

>The TRC-451 is a Cobra 146 in a different

See all the good stuff I learn here?
Was never really a Cobra fan, but it's good to know,

_
>Let's see, no AM modulation, VR10 makes no
>difference.

Ahh,.... it appears you are trying to RE-fix a radio where someone has
already been inside......I would guess this would be very different as
opposed to going into a stock virgin radio.

>This and a broken Lafayette LMS-40 were

>picked up broken for $10 my years ago. The

>Besides, I need that experience!!!

_
LIKE the DX,,,LOVE the DX on 11 meter, and the only reason some are into

cb is for HF DX. Talking everyday with the help of repeaters quickly
takes the fun out of long distance communications, for many HF DX
enthusiasts, and many simply do not give a damn about hammie radio.
CBers, collectively, do not tend to mention or concern themselves with
hammie radio. Wonder why the opposite doesn't hold true? Nevertheless,
it's good you found a medium of communication that lends you what you
have been missing on cb. For many others, cb is it,,,there is no
interest in hammie radio. Some intellectually-challenged folks have a
problem with this and feel since one is not interested in hammie radio,
one is somehow "beneath" those who who are. THAT'S really gonna add to
the hammie numbers....can't help but howl at those who share that view.

_
>Skip will die down, some year. My CB will get

>more use. Right now, it's pretty useless for

>local talking. Skip has gotten boring over the

>past 26 years. Same noise, different

>screamer. <:

And that is how many folks come to hammie radio, growing bored with cb
and looking for more than mere skip.

_
Depending on the TRC unit you own, either 22
or 39 other channels are available. Between this and a beam, there are
many avenues of escape. When the aggravation factor sets in concerning
what one hears on the air, no matter what service one uses, it's time to
shut it off.

>The only 23 channel radio I have is a Regency
>Range Gain. Mid 60's tube model, crystal

>synth mixing. It's about a 6 or 7. Original mike!

I still have an old Regency scanner that utilizes crystals. Still works,
too.

>I turn my CB on when I'm out. It only takes a

>minute before some Mexican or trucker or

>bleedover turns my receive to trash. CLICK. I

>try again 10 or 20 minutes later. Repeat cycle,
>ad nausium,

I hear ya'.......I just keep changing freqs,,sooner or later I can find
some DX that is louder than the Espanol....I really don't mind talking
DX to the big trucks.

_
>BTW, if I change channel, how will we find

>each other besides 2 meter simplex?

Ha! You can always listen for me on the freeband and reply on 2 meter...I mean, many instances exist where one transmits on one feq and replies on another <g>....

Mabry you need to read what I said again, IN CBs there is NO audio clipper (look into a FM transmitter circuit and see if one of those are found inside a CB, NOT.) it just a feed back circuit that controls the modulation level by using a AGC audio circuit, and that is what the techs cut out. In my reference the audio clippers does clip the audio in a symmetrical way that sounds Good with out over modulation.
For as saying CB want to be Loud and Swing
is a kick .

Read the other post first before jumping. Open up the CBs as of today and compare it to other radios in the other fields, they are being in technology, To BIG, no good engineering in them, just old circuits that everybody in china has copied, and the same old cap.

Really? Kindly explain to the masses how operating on 26.995 or 22a
"causes" more splatter than the legal channels.....go on now,,,,we're
all ears.

> You know perfectly well what adjacent

>channel interference means, but you have put

>on your clown suit and begun feigning

>ignorance, sensing an opportunity to

>misinterpret and play word games.

Not at all. I know "perfectly well" what you were attempting, and it was
shot down before it had a chance. For the record, you mentioned no
"adjacent channel interference", but let's work with that. How can
operating on 22a cause anymore "splatter" OR (to settle your
rising-anger) "adjacent channel interference" than operating on 22? No
word games, just you doing the frankie-stein shuffle. Operating on said
channels causes no more "splatter" "interference" or (ahem) "adjacent
channel interference" than any other legal channel. Period. Now, isn't
it about time you become personal with me? I mean, that is what you do
when crow is force-fed you.

>On the

>next post you'll try and shift the focus to some

All this fuss because I refuse to answer OR justify my actions to lids like yourself. Get over your bad self...LOL!

1356. Hurricane Procedures (OT)

Newsgroup: rec.radio.cb
Date: 2003-07-23 15:46:32 UTC
From: twistedhed@webtv.net
Message-ID: <29036-3F1EADD8-5@storefull-2316.public.lawson.webtv.net>
Source record: 162788

I noticed many of these can apply to my friends in Texas......

_
Living in Florida

We're about to enter the peak of the hurricane season. Any day now, you're going to turn on the TV and see a weather person pointing to some radar blob out in the Atlantic Ocean and making two basic meteorological points.

(1) There is no need to panic.

(2) We could all be killed.

Yes, hurricane season is an exciting time to be in Florida. If you're new to the area, you're probably wondering what you need to do to prepare for the possibility that we'll get hit by "the big one." Based on our experiences, we recommend that you follow this simple three-step hurricane preparedness plan:

STEP 1: Buy enough food and bottled water to
last your family for at least three days.

STEP 2: Put these supplies into your car.

STEP 3: Drive to Nebraska and remain there until Halloween.
 Unfortunately, statistics show that most people will not follow this sensible plan. Most people will foolishly stay here in Florida.
We'll start with one of the most important hurricane preparedness items:

HOMEOWNERS' INSURANCE: If you own a home, you must have hurricane insurance.
Fortunately, this insurance is cheap and easy to get, as long as your home meets two basic requirements:

(1) It is reasonably well-built, and

(2) It is located in Nebraska.
Unfortunately, if your home is located in Florida, or any other area that might actually be hit by a hurricane, most insurance companies would prefer not to sell you hurricane insurance, because then they might be required to pay YOU money, and that is certainly not why they got into the insurance business in the first place. So you'll have to scrounge around for an insurance company, which will charge you an annual premium roughly equal to the replacement value of your house.
 At any moment, this company can drop you like used dental floss.
 Since Hurricane George, I have had an estimated 27 different home-insurance companies. This week, I'm covered by the Bob and Big

Stan Insurance Company, under a policy which states that, in addition to my premium, Bob and Big Stan are entitled, on demand, to my kidneys.

SHUTTERS:
Your house should have hurricane shutters on all the windows, all the doors, and -- if it's a major hurricane -- all the toilets. There are several types of shutters, with advantages and disadvantages:
Plywood shutters: The advantage is that, because you make them yourself, they're cheap.
The disadvantage is that, because you make them yourself, they will fall off.
Sheet-metal shutters: The advantage is that these work well, once you get them all up.
The disadvantage is that once you get them all up, your hands will be useless bleeding stumps, and it will be December.
Roll-down shutters: The advantages are that they're very easy to use, and will definitely protect your house. The disadvantage is that you will have to sell your house to pay for them.
Hurricane-proof windows: These are the newest wrinkle in hurricane protection: They look like ordinary windows, but they can withstand hurricane winds! You can be sure of this, because the salesman says so. He lives in Nebraska.
Hurricane Proofing your property: As the hurricane approaches, check your yard for movable objects like barbecue grills, planters, patio furniture, visiting relatives, etc...
You should, as a precaution, throw these items into your swimming pool (if you don't have a swimming pool, you should have one built immediately). Otherwise, the hurricane winds will turn these objects into deadly missiles.

EVACUATION ROUTE:
If you live in a low-lying area, you should have an evacuation route planned out. (To determine whether you live in a low-lying area, look at your driver's license; if it says "Florida," you live in a low-lying area). The purpose of having an evacuation route is to avoid being trapped in your home when a major storm hits. Instead, you will be trapped in a gigantic traffic jam several miles from your home, along with two hundred thousand other evacuees. So, as a bonus, you will not be lonely.

HURRICANE SUPPLIES:
If you don't evacuate, you will need a mess of supplies. Do not buy them now! Florida tradition requires that you wait until the last possible minute, then go to the supermarket and get into vicious fights with strangers over who gets the last can of SPAM. In addition to food and water, you will need the following supplies:
23 flashlights. At least $167 worth of batteries that turn out, when the power goes off, to be the wrong size for the flashlights.
Bleach. (No, I don't know what the bleach is for. NOBODY knows what the bleach is for, but it's traditional, so GET some!)
55 gallon drum of underarm deodorant.

A big knife that you can strap to your leg. (This will be useless in a hurricane, but it looks cool.)
A large quantity of raw chicken, to placate the alligators. (Ask anybody who went through Andrew; after the hurricane, there WILL be irate alligators.)
$35,000 in cash or diamonds so that, after the hurricane passes, you can buy a generator from a man with no discernible teeth.
Of course these are just basic precautions. As the hurricane draws near, it is vitally important that you keep abreast of the situation by turning on your television and watching TV reporters in rain slickers stand right next to the ocean and tell you over and over how vitally important it is for everybody to stay away from the ocean.
Good luck, and remember: It's great living in Paradise, and there ain't no place I'd rather be,,(with a nod to Jed and his doggie in Tennessee)!!

Uh... quick question.... 22a is 10kc up from 22, just as 19a is 10kc up from 19, right? 22 is 27.225, 23 is 27.255, 24 is 27.235, 25 is 27.245, and 26 is 27.265. So 22a would be the same channel as 24, wouldn't it?

Or have I missed something?

From: ML <Bullheadcity@hotmail.com>
Message-ID: <oRBTa.98$8p3.6@news01.roc.ny>
Source record: 162794

Hi,
I'm new to this scanner thing. I have been looking over the internet for links to the frequencies I want, but all I find are broken links. What I need are:
In Arizona
Arizona Fish and Game
Bullhead City Police and Fire
Fort Mohave Sheriffs and Fire
In California
California Department Of Fish and Game
San Bernardino County Sheriffs Needles office
In Nevada
Nevada Department Of Wild Life
Laughlin Police and Fire.
Basically I want to monitor every one on the Colorado river from Lake Mohave Arizona, to Needles California.
I thank you for your time and assistance.
Mike

>Or have I missed something?

>-SSB

_
That's right. See the irony?
Anyways, 22a was a better example when we had only 23 channels. 10 Khz
above channel 3 (26.995) or between 7 and 8 (27.045), or 27.095 and
27.145 are but a few more examples.

1363. Re: Power vs Mode (The fundamentals)

>most part, regular AM bandwidth is wider than SSB.

Good grief.... The audio bandwidth (for CB) is the same -- 0.3 to 3 KHz. The RF bandwidth of AM is more than twice the witch of SSB because it covers from 3 KHz below to 3 KHz above the carrier, and therefore picks up more than twice the noise as SSB.

>:> Add that with the clarifier knob requirement of SSB

>: people I talk to are using radios that haven't been modified.
>
>No two unmodified radios are on the same exact frequency. Given a group of stock radios, some will be either side of
>the assumed channel center.

You don't need the radios to be on the -same exact- frequency, just really close. And the DEVIATION from that center frequency in an unmodified radio isn't significant as long as the radio has been properly aligned and maintained. Ever hear of a 'bell curve'? You and Tnom should get together and form a study group on that subject. And if you -really- want to pick some nits, you two should also study some things about temperature compensated crystal oscillators (TCXO's), PLL frequency synthesis using dual-modulus prescalers, the frequency response of the human ear and it's variation between different people, the psychology of sensory perception, etc.

>: Duty cycle is the ratio of transmit time to receive time. Modulation percentage
>: doesn't use receive time as a factor.
>
>It's more than than just Tx and Rx times...

But receive time has NOTHING to do with modulation percentage! Is that so hard to understand? Sheesh....!

>: Power microphones, audio processors, modulation limiters... things that change
>: the peak-to-average modulation ratio... all will be discussed soon.

>
>Opinions will vary quite a bit...

Opinions are like assholes -- everyone has one and they all stink. I don't plan
on discussing opinions. Just facts. And when people have the -facts- they can
make their -own- opinions based on the -facts- instead of relying upon the
uneducated opinions of some wannabe-tech keyclowns.

>
>sure:
>http://dj4br.virtualave.net/ssb3e.htm

Next time you plagiarize a ham you better verify his 'facts' first -- here is a
site that does an excellent job of explaining 'coherent detection':

http://www.qsl.net/dj7hs/ccwtheo.htm

BTW, did you notice where he talked about SSB and how the frequency of the
reinserted carrier "may be in error by 100 cycles or more without serious loss
of intelligibility"? That kinda puts the crimp on your "same exact frequency"
complaint.

>: Time for another lesson: You can look at AM in two ways. One way is in the
>: frequency domain, with a carrier of constant amplitude and the modulation
>: carried in the sidebands. The other way is in the amplitude domain, in which the
>: carrier varies in amplitude according to the modulation (which is where the term
>: "Amplitude Modulation" originated). Envelope detection works in the amplitude
>: domain by passing the rectified RF or IF signal through a low-pass filter. And
>: in case you didn't notice, a diode detector blocks half the modulation power!
>
>Depends on the detector type... there are more than single diode detectors, even for AM
operation.

When was the last time you saw a full-wave AM detector?

>: All right, if you really want:

>: 0.072 / 3 = 0.024
>: 0.02 <> 0.024
>
>http://dj4br.virtualave.net/ssb3e.htm

God damn, Skip, how dumb can you be? You just copy the stuff without any
comprehension of what it means? His figures of 0.12 and 0.072 are just typos;
they are supposed to be 0.1 squared and 0.07 squared:

0.1^2 = 0.01
0.01 / 6 = 0.00167

0.07^2 = 0.0049
0.0049 / 3 = 0.00163

And they STILL aren't equal because his 'arbitrary' level of noise voltage
wasn't picked arbitrarily -- it was cooked and rounded from the intended result!
Didn't I suggest a long time ago that you should quit relying solely on the
internet for your education? I'm pretty sure I did....

>:> The s/n ratio
>:>for the AM system is 20 log s/n in terms of voltage, or 20 dB. For the

>: would be detected by the same process, negating the effect you are claiming
>: actually occurs.
>
>http://dj4br.virtualave.net/ssb3e.htm

Well, let's see... If the sidebands are added in the detector, then so is the
broadband noise with each sideband. So you have twice the noise bandwidth, and
therefore twice the noise power. RE: above references, but if those are too
complicated try this one:

http://www.geocities.com/w4jbm/noise.html

>have specific questions about his statements.

You might do that yourself to notify him of his mistakes in both theory and mathematical notation. Then spend a few hours at your public library reading some -qualified- material on these subjects. You might start with the ARRL's "Radio Amateur's Handbook", which disagrees in every topic you have referenced from your source.

You are right, most of them do use an AGC (AMC) system. Regardless, they are
there for a reason -- they prevent overmodulation while maintaining the dynamic
range of the modulating speech. Disabling the circuit will most definately cause
overmodulation.

BTW, Mabry is back with the Mariner's again.

> In
>my reference the audio clippers does clip the audio in a symmetrical way
>that sounds Good with out over modulation.

The AMC circuits are not symmetrical? And unless you happen to have a sampling
o-scope on the bench, how do you know you aren't overmodulating? You don't, and
you most likely are, especially when "LOUD" is your primary objective.

> For as saying CB want to be Loud and Swing
>is a kick .

Maybe to a moron or a small child.

> Read the other post first before jumping. Open up the CBs as of today and
>compare it to other radios in the other fields, they are being in
>technology, To BIG, no good engineering in them, just old circuits that
>everybody in china has copied, and the same old cap.

That's because AM is old technology. Read MY other post before jumping -- radio
is a method of communication. It is not an amusement park for morons, and not a
therapy room for unsocialized misfits whom people ignore in normal conversation.
If you want to be 'LOUD', distort your voice, and add cool sound effects, get an
audio effects box like a MidiVerb and plug it into your stereo. If you want to
be heard, say something that people want to hear instead of forcing your idiotic
and thoughtless rhetoric on them with screaming, splatter and 'swang'. Because
otherwise, the only people you are impressing are other morons like yourself.

Here's a new technical term for you: PLP, or Peak Learning Power. It is defined
as the highest point on the learning curve that a person is able to achieve.
People with a low PLP never seem to understand that "power" isn't how many watts
you have, it's how you -control- those watts; and it's not how "LOUD" you are,
it's how you -control- your speech. Even Twisty understands that much. Like I

said before, get a clue. Do you want to impress people? Prove that your PLP wasn't maxed out by the concepts of "LOUD" and "swang".

Just because AM is a old technology doesn't mean that it can't use newer
style parts with some improvements
in the circuit design and a smaller BOX.

You said to put the FM clipper in an AM radio to sound loud; "Put in a mic circuit like is used in FM equiment...." So how is it symmetrical in an FM radio and not an AM radio? How is an AGC circuit -not- symmetrical? Or is it like your clipper that is only symmetrical in an FM radio?

And they have made plenty of improvements over the years. Starting with tube circuits and point-to-point wiring, moving on to PCBs, semiconductors, integrated circuits and PLLs, and many even have seperate processors for frequency control and audio processing. Compare the size and weight of the old whiteface Johnson Messenger or the Lafayette HE-20 to that of any modern radios, and if you can't tell the difference then try dropping both of them on your feet. And don't forget that this is CB radio -- it ain't NASA, SETI, military or commercial trunking, HDTV, cell-phone networking, or even amateur radio. CB is about one step above a child's walkie-talkie, using modulation methods that are older than your great-grandpappy. So how much technology do you need? Or do you just want some hi-tech stuff in your CB radio because 'hi-tech' is cool?

'hi-tech' is cool. Yes I want a CB built like a ICOM, small, new ICs,not
discrete transistors, much smaller, good designed case,
and a good modulation circuit with good audio processing.

What a moron

lets see, what do i have left....
a heathkit dx-100 AM transmitter, working perfect!

a hammarlund hq-100 receiver, works perfect.

2 eimac 4cx1000k tubes, with eimac info

a sure 444 desk mic wired for kenwood

a dentron dtr-1200L hf amp, i have used this as a project amp, it originally had 2-572b's in it, right now its ready to go as a single band amp, but it has no tubes, cause a "buddy" borrowed them and messed them up, so i started a reconfig to a 4cx1000k, and ran out of health.

a D&A hornet 10-40mtr 100watt tube type amp.

a sonar 10-11mtr amp, tube type at 100watts.

hehehe.. and last but not least.... you guys are gonna love this.

my first radio, a cobra 139xlr 40 channel ssb basewith matching cobra desk mike.

tell your friends.. and pass it around, i would love to get this stuff out of my way....

73's
Ken.

Now THAT I agree with -- wasn't it Cobra that was the first company to put their CBs in a plastic box? Jeez that was dumb.

>and a good modulation circuit with good audio processing.

For the type of use for which the band was intended, the circuits work just fine. If you want something more, plug it in the mic line.

>What a moron

Because I think that the old Johnson Messenger III was one of the best built CB radios ever made? So what if it uses channel crystals, the darn thing is nearly bulletproof inside and out! The old Cobra 12 (or was it the 21) was pretty darn good, too. The old Lafayettes were mighty robust, and last week I found an old Utac that had literally been run over by a car and still worked! Then there's my old, reliable Hallicrafter's CB-3A that I use regularly -- an old tube-type that runs off both AC and DC, puts out a whopping 2 watts carrier (no swang), and sounds great if you believe all my reports. Last month I bought a Harley, and while it was cool for a couple days, it's not nearly as much fun as those older radios. You know what's cool? Talking to someone for an hour, then telling them that they have been listening to a 40 year old operator on a 40 year old rig! Yeah, I guess that makes me a moron.

Most of them are not interested in technical topics, they just want to operate.

Most Hams are older, anti-social males. They make DX contacts through the radio, but will not talk to the person next door. You could hear them making random contacts Fri, Sat night too. Most are interested in boring aspects of radio such as contesting (making short random contacts over and over again)..

Also, a significant percentage of them are overweight, more than the general population. Not surprisingly, very few females in Ham radio.

Back to the books, son.

200 watts RMS deadkey, 800 watts PEP at 100% modulation
with a single modulating tone.

Learn what measurement is used where.

And Jay would NEVER screw up a simple formula like that!!!
Careful how you quote things next time.

I was once a no-code Technician. The only difference between you and I is two writtens and a 5-wpm code test. The ability to pass the 5-wpm is not anywhere near Morse code proficiency and can be passed easily with some study and determination.

I disagree with your stance but I like your fire. Encouraging those with similar beliefs to get off their collective ar$es and make some noise is likely the right direction. I hope that those opposed to dropping Element 1 do the same. I happen to believe we (PCTA) outnumber you (NCTA) by a count of 2:1.

Ummmm, maybe the requirement is dropped in other countries but they don't live by our laws, nor we theirs.... Just because you want to jump off a bridge, don't expect others to. IF the speed limit in other countries is 100 MPH, you feel you deserve to drive 100MPH here too? The FCC had to go along with the INTERNATIONAL community. I'm sure that if you would keep your pants on, they will be issuing shortly a memo to abolish the code requirement. IT IS A BUREAUCRACY... It doesn't happen over night. As to the ARRL, they don't run the country. NOR the FCC regardless what anyone may want to think.

IF YOU want to be a law breaker, have at it... but don't expect the law abiding people to slit their throats at your command. SOME do believe in rules and laws. Obviously, you're not one of them. You portrayed that very well. I'm not a code fan, but hold a 20WPM Extra license. It was a requirement that earned me the right to use the bands much like the license to drive my vehicle.. ALL PRIVILEGES - EARNED. You aren't born with them. It amazes me how many are so gung ho to side step the laws and rules and yet if their feet are stepped on, the first to bitch. Sit back and enjoy what you have. Some day, radio will be so miserable you won't want it anyway. It is going there very quickly. Some day you'll wish there were laws and rules being upheld. As I said, I'm not a code fan, but it took work to get my license... another thing many are afraid of. WORK. When something is GIVEN to you, it holds NO value. When you EARN it, you tend to value it. A LOT.

Just my 2 cents...

I'm with you, although I have much less time now. (Two jobs.) Our friend went back to Oregon. Sadly, a victim of corporate downsizing...er, I mean "streamlining." I haven't seen him post in over a year now. But I'm certainly game. Went to TSR, The Spare Rib, yesterday and had a nice cut of prime rib.

A troll is one who asks others to do something wrong. In this case, it is use of
10 meters without the proper class of license. The second part of his message is
something that can be done. If you wish to use 10 meters in violation of your
ticket, so be it, it's your NAL, pay it if you want.

His message is half-troll, half good idea. I think we all just need to sit
back and wait a few more months to see what happens. You would be better off
complaining about BPL. If it happens, HF won't mean shit, CW or not.
(Also CB, MW, TV 2 thru 6, 6 meters, VHF lo band and harmonics out the wazoo)

Man oh man.....some of them radio cops ain't gonna like your approach,,,,funny how when a cber suggests dxing and ignoring a poorly constructed law until it's changed (DX law as pertains to cb), it is referred to as a "criminal act", but when a hammie suggests ignoring a law, those who say "you either obey the law or you're a criminal" (Frank Gillinad, N8wwm, Dave Hall N3cvj, WA3moj, and related ilk) are nowhere to be found and strangely silent on the issue.
Ha-ha-ha-hi-hi-hi-hy-hy-hyPOCRISY!!!

Same old "sky is falling" negativity of some that profess
the end of ham radio. The same silly attitude was there
when any rule changes are suggested or made.

> Some day you'll wish there were laws and rules
> being upheld.

Ditto my last.

> As I said, I'm not a code fan, but it took work to get my

Yawn, same old work effort garbage for the sake of serving
as a test of interest level.

> When something is GIVEN
> to you, it holds NO value.

Strange, I have been given many things in life that I
treasure greatly.

> When you EARN it, you tend to value it. A LOT.

So my easy ability to pass the Extra written once the code test was
dropped to 5 wpm because I have a career in electronics
must mean I value the license less? Bzzzt! Does not compute!

> Just my 2 cents...

And mine also.
Cheers,
Bill K2UNK

where can i get a replacement readout for this radio ?
some of the segments are burnt out and i would like to restore this rig
to factory condition.
The channel display is fine but the freq. display needs replacement.

If it wasn't someone using the name "Keith", someone also posting from
newsguy was suggesting the use of 10 meters by techs in protest.

Now you're gonna' tell me it's not the same guy, just because you're you.
You may drag Frank into a pissing contest, but I see right through your BS.

Are you related to stewart (horseshoe7)?

I can smell a troll a dialup away...

Subject: ATTN: Tech Licensee USA Morse Code Freedom Day is August 1st
Date: Thu, 24 Jul 2003 01:54:43 -0700
From: morse@code.is.dead
Organization: http://extra.newsguy.com
Newsgroups: rec.radio.amateur.policy, rec.radio.cb

Let the FCC know that they can no longer keep you from your right to use the
ten meter band allocation if you are a technician licensee. The international
requirement for morse code has been removed and there is no such thing as a
technician plus license.
You don't have to use your identity, but no code technicians need to finally
speak out to the FCC they will no longer be oppressed by rules designed for the
stone age of electronic technology.
Get on the air at 6pm local time on August 1st or if the band is open any time
to make contacts in the 28.300-28.500 MHz that is allocated to technicians for
voice. Or if you have a computer you can use the allocated technician CW bands
to send and receive morse code.
Currently the FCC and ARRL want to drag this morse code requirement out for
one or two years while they put BPL and other technology on the fast track. I
will be on the air and I hope 10,000 or more no code technicians will join me.
I guess Hollingsworth will have to require 10,000 people to turn in their CW
proficiency certificate if YOU will join us.
The morse code game is over and I'm not driving 55 when the speed limit is
really 70 mph and the government hasn't changed the signs yet. Just go by the
limitation of your technician license and don't go overboard, we want to show
that just because we didn't pass some dinosaur morse code test that we are bad
operators.

Get on 28.306 USB at 6 PM local time to talk with other no code tech's that are protesting the FCC and ARRL stupidity.

Well, I certainly can't take issue with his approach. Massive Civil
Disobedience on a wide scale can be extremely effective. Has anyone else
thought about what this "protest" may actally lead to? Suppose a
plethora of ops show up, unlicensed and unauthorized, both, to partake
in the protest. Then they can do it again the next week, Then the week
after, and the week after,,,pretty soon, we can all be rolling onto ten

meter as a place for more quality HF spectrum with no reservations and no licenses....with minimal enforcement...the way it ought be. Done told them nocodes over and over,,, watch they ask for,,,,,,,they just might get it. Some need to reach for that instant gratification, though, and it appears no matter how much noise they make, it ain't gonna happen. The code has it's purpose in life, and contrary to many nocodes belief, such is not to keep them down, but to add to and enhance their radio knowledge and capabilities.

For anyone that wants to save their radio waves from an RF intrusion
of the greedy type, read on.

This is much more important then the CW issue.
This is a real problem in the making for ALL RADIO USERS!!!

Write your congressperson, write the chairman of the FCC, write letters
to the editors. Speak loudly. Speak often against BPL. Do not take this
issue lightly. Do not assume someone else will do it for you.

Our radio waves are in JEOPARDY!!!

Talk about irony... if BPL goes through, there's a good chance that only CW
will be able to punch through it... : |

Just make sure to key your elements on their carrier frequencies.

I believe that if a technician was licensed a long time ago, he would already be grandfathered to general. I also believe that the codeless techs and tech pluses are lacking one element of written exam to be grandfathered into a general class ticket, but I could well be wrong. Back in the late 60s I also managed a qso using land-line Morse. I doubt there are any CW programs for computers that would have much luck with that :)

Frankie,

It used to be a lot of fun to pull your chain, but like Michael Savage,
you are now mostly a bitter mean jackass. So I'm done having a bit of fun
jacking you up... Your ratings are way down... back to O'Riley on Fox.

maybe next time...

That makes no sense at all... What is 'key your elements' ?

Do you mean to set your carrier frequency to the carrier frequencies of the
interfering BPL signal? If so say so.

"elements" as in the individual di's and dah's the make up each character.

I've been looking at the .gif from Texas Star, and have already learned
to copy a few characters. The first one I learned is "3". All the calls
here have it. Also "k" and a few more in my call.

dah-di-dah dah-dah-di-dah?

I figured with my musical background, it would be easy. I just don't like
you guys trying to force feed it to us. It won't look good on your shoes. <:

How does breaking the rules of your license class prove that you are not
"bad operators". Seems to prove just the opposite.
The code may be an antiquated method of communication, but, it does prove
your desire to learn and work for what you want.
Remember, "Anything worth having is worth working for".
I may only be a 5 WPM extra because I got my license after the rule change
but I studied the code, struggled with the code
and finally passed after 3 tries. I value my license more because I had to
WORK for it than if all I had to do was fill out a form
and wait.
Nothing you ever learn is wasted.

Yes, fines, NAL's and me keying up legally with my legal limit amp every
time some assclown who is not licensed keys up.

> Suppose a plethora of ops show up, unlicensed and unauthorized, both, to
partake

Then you have an extension of the chicken band, and I can gurantee the FCC
will not take kindly to unlicensed intrusions. They will not get them all
but they sure will try to make an example out of those that do get caught.
Bank on it, Riley Hollingsworth is well aware of what is going on.

>pretty soon, we can all be rolling onto ten meter as a place for more
quality HF spectrum with no reservations and

Why not take the test and get the license " the way it out to be" the way
everyone else did it you rather be a schelp and steal something that doesn't
belong to you, according to the governemnt who's land you live on.

Even though the FCC does not maintain the info in their database, you will certainly have to be able to provide proof via the appropriate documentation that you do have the privileges should you ever receive an NAL from the FCC. That means that the burden of proof will lie on the Technicians to prove they have the privileges not on the FCC to prove that they don't. The FCC will most likely maintain that anyone who cannot provide that proof does not have the privileges. You may think you have a loophole but you don't. So you had better keep that CSCE or old Novice license or old Tech Plus license in a safe place.

What a cop-out! I disprove your BS, and instead of opening your mind (and a few books) to the facts, you run away with your tail between your legs and call me a "bitter mean jackass". Why? I didn't use any name-calling -- I didn't even call you 'Skippy' in this thread! But you turn and call me a "bitter mean jackass" because I point out that your technical information is seriously faulty? Well, kiss my ass, Skippy! BTW, you never did reply to my last post in our previous exchange. Remember this one?

http://groups.google.com/groups?hl=en&lr=&ie=UTF-8&safe=off&selm=3dddd45a.20706%40news.cet.com

Just like the last time, you have proven that you know far less about radio than you claim. And just like the last time, you are backing away using the "I don't care" attitude. Go away, Skippy. Go try and impress your amp-gods, because you aren't impressing anyone here.

Go for it! With the harmonic content those amps create, you will be an easy target when the FCC rolls their DF vans into your town!

I believe he is referring to the part where they are asking the Technician
Class operators to go ahead and get on 10 meters to show support for
dropping the code requirement.... you need a TECHNICIAN PLUS or higher
license to get on 10 meters. SO, by wanting those NOT legally licensed
according to current rules and regulations, it would in fact, be ILLEGAL!

1. The ITU left the international interpretation up to individual countries and
administrations.

2. The current structure will remain the same until FCC makes any changes. This means that present band plans will stay in the meantime. They could decide to keep 5 WPM if they so choose.

3. The "protest" could fail if band conditions aren't conducive on 1 August.

4. And such a protest, while seeming to be in order, might lead to things worse
than the "problem". Who knows?

It's a symptom of today's society: I want it, I want it NOW, and I don't
want to
work for it--instant gratification. Unfortunately, why don't we just come
out and
say it? What the anti-code code folks want is the same anarchy that
prevails on
the CB band. Trouble is, they are not smart enough to realize that the
result would be worse than the cure: when they finally finished ruining
radio and making it unusable, they would wish that there had been some kind

of order after they can't talk across town for the keyclowns. It isn't a matter of whether there is a code requirement or not, it is a matter of what they ultimately want:
Next organization to pop up will be NTI--No Test International. Just go to Wal-
mart or Bubba's CB shop and VOILA--"Ah'm one of them 'ere 'good' operators, thar, tan fer thar?"

While they might not "catch" every one of the protestors, it might cause some
of them to lose the ability to gain access to other bands. Such as the general
bands. If found breaking a rule, a ham can be restricted, fined, revoked,
or denied the privilege of upgrading. I am just saying (even tho I smell a troll) that
such a "protest" is not a good idea, nor the way to affect change. If someone is
willing to break the law instead of waiting for change, or petitioning for
said change, then those so-called "good" operators don't deserve what they seek in
the first place.

And I suspect anyone who did this would find himself very much alone on those frequencies. Only an idiot would risk his license doing something like this. That and your provocative email address, should be enough to convince most you message is nothing more than a message trolling for suckers foolish enough to take it seriously.

Dwight, There is no way for anyone to know if a tech license has passed a
morse code test and all techs have voice privileges for 28.3-28.5 MHz.
What is the FCC going to do run around and check every tech license holder?
Besides would you rather give up ten meters to truckers and CBers?

You have a VERY active imagination. He asked for " properly licensed "
individuals to help out on Aug 1. The other method he described was
for CBers and others to contact the FCC He did this by posting the
message in rec.radio.cb

>"A group to protest the requirement of morse code for properly licensed

"Easy access". That's it, isn't it? You can't handle the unbelievably slow rate of 5 wpm -- it's just =SO= difficult for you to learn that you need to wait until Morse is no longer required. Are you that spoiled and lazy that you need to have everything handed to you on a platter? Haven't you ever had to work for anything in your life? Did you have to work for your first car, or did mommy and daddy buy it for you? Do you work for a living, or are you a fat, lazy keyclown that expects everyone to pay your way, collecting welfare checks and doing absolutely nothing to better himself? I think the latter.

aw come on frank..........damn ....those new meds must be working
real well.........usually you would fly off the handle, read me the
riot act, tell me the fcc rules and regs and then chastise the kenster
for selling this kind of stuff on a cb newsgroup, where according to
you, all we should talk about is unmodified cb rigs.............but
you said frank that you wanted to clean up the cb bands, both you and
jerry........so here is a good chance for you two bozos to do
something...........go ahead.......give the kenster a tongue
lashing........maybe it will sink in......good buddy...........

Why should I mind? As long as you keyclowns keep buying and using those cheap
CB amps, you will do a better job of cleaning up the band than I could ever hope
to accomplish in the newsgroup! If I had the cash I would hook up with Brian and
make sure that every one of you dopes had an unbiased, unfiltered, overvolted
and overdriven piece-of-shit "linear" with lots of 'swang'! That way the FCC
would have no trouble at all locating you if and when they ever pull their
collective heads out of their collective asses and begin enforcing the CB. From
what I hear, that day is coming soon. But don't get your hopes up -- you go

right ahead and crank out those bird-watts like the FCC didn't exist, ok?

act, tell me the fcc rules and regs and then chastise the kenster for
selling this kind of stuff on a cb newsgroup,

>Why should I mind? As long as you keyclowns

>keep buying and using those cheap CB amps,

>you will do a better job of cleaning up the band

>than I could ever hope to accomplish in the

>newsgroup!

LOL,,,that you expect to accomplish anything in an obsure pocket of the
internet, especially concerning cb, is mildly amusing. Hey Frank-lite,
does your statement cocerning such amps apply to Texas Star or Davemade?

> If I had the cash I would hook up with Brian

>and make sure that every one of you dopes

>had an unbiased, unfiltered, overvolted and

>overdriven piece-of-shit "linear" with lots of

>'swang'!

Frank-lite, even if it WAS free from you, we'd rather have somehting
that was reliable and tested. Sorry, but haven't heard or come across
anyone that has even heard of you or your name in the radio business.

Making a transition from TV repair to the wonderful world of two way communication and repair of radio is not something you can achieve by merely sell-professing, my good man.

> That way the FCC would have no trouble at

>all locating you if and when they ever pull their
>collective heads out of their collective asses

LOL...yea,,the FCC would have one hell of a time finding all those regs on the air, bowl, and freeband, especially those who have been at it for years and years. The chink in your rusted armor is the word "If", illustrating your biases giving way to your personal wants and desires, but removed from reality.

>and begin enforcing the CB. From what I hear,
>that day is coming soon.

Yea? Cite a source,,,,ah, never mind, don't bother.

>But don't get your hopes up -- you go right

>ahead and crank out those bird-watts like the

>FCC didn't exist, ok?

LOL..Hokay,,and thanks for the permission after almost 5 years of uninterrupted, constant failures of you "hoping to accomplish in the newsgroup" some type shift in cb radio operators behavior.

Has anyone else thought about what this "protest" may actally lead to?

>Yes, fines, NAL's and me keying up legally

>with my legal limit amp every time some

>assclown who is not licensed keys up.

Talking over unlicensed ops is perfectly ermitted and your
right..however, keying up only and "every time" you hear such ops most
definitely constitutes an initiated "exchange" with the unlicensed
lawbreaker, rendering you no better, as you have now reduced yourself to
breaking a law to uphold another that you interpret as more valuable.
This is a perfect example of one such as yourself willing to casually
disregard any law you feel doesn't apply to yourself, yet you
incorrectly chastise others for what you misinterpret as their
disregarding of laws. The folly of it all, is the irony is lost on
yourself per your inability to see yourself as others do,,,LOL.

_
 Suppose a plethora of ops show up, unlicensed and unauthorized, both,
to partake in the protest. Then they can do it again the next week, Then
the week after, and the week after,,,

_
>Then you have an extension of the chicken

>band,

Exactly..which was my point in saying "Watch what you ask for, you just may get it." Without licensing, the hammie band is merely another cb-type service for casual hobby. And try not to lose site it was a hammie suggesting the nocodes hold a protest such as illegal entry on ten meter.

>and I can gurantee the FCC will not take

>kindly to unlicensed intrusions.

Really? Not even Riley makes such guarantees, but then again, your ego is so much more heavily involved than most, it is responsible for your outrageous claims. Tell ya' what, junior G-Man,,,I just may partake in such a protest just to watch your type melt at the mind. If you promise to key up, I'll promise to reply,,,I mean,,,you are legal for that frequency are you not?

>They will not get them all but they sure will try

>to make an example out of those that do get

>caught.

I'm gonna make it real easy for ya'' .....get out your tape recorder and put your money where your mouth is! Surely after an advance warning of such a protest, the FCC would be able to,as you claim, "make an example out of those that do get caught"....LOL. Better git busy.

>Bank on it, Riley Hollingsworth is well aware of
>what is going on.

Which is why you can't bank on it. He's known what was taking place since his appointment.

_
pretty soon, we can all be rolling onto ten meter as a place for more quality HF spectrum with no reservations and
no licenses....with minimal enforcement...the way it ought be.

>Why not take the test and get the license " the

>way it out to be" the way everyone else did it

>you rather be a schelp and steal something

>that doesn't belong to you,

LOL,,you appear pretty desperate to disparage someone this morning,,LOL..why else would you make such a claim? That you snipped my post illustrates your agenda,,,,that you try to attribute intruding onto ten meter to myself has never worked. Your lethargic mind can't stand the fact that this idea came from a nocode and my position has always

been to avoid hammie freqs at all costs, Now do try and remain relevant and not allow your personal out-of-control self to miscalculate so.

>according to the

>governemnt who's land you live on.

You haven't been correct about anything since I had the displeasure of your lid-introduction years ago, let alone possess the intestinal foritude, intellect and self-control needed to remain on pertinent, on topic and relevant.

Let the FCC know that they can no longer keep you from your
right to use
the
ten meter band allocation if you are a technician licensee. The
international
requirement for morse code has been removed and there is no such thing
as
a
technician plus license.
You don't have to use your identity, but no code technicians need
to finally speak out to the FCC they will no longer be oppressed by
rules designed for the stone age of electronic technology.

_
How does breaking the rules of your license class prove that you are not
"bad operators". Seems to prove just the opposite. The code may be an
antiquated method of communication, but, it does prove your desire to
learn and work for what you want. Remember, "Anything worth having is
worth working for". I may only be a 5 WPM extra because I got my license
after the rule change but I studied the code, struggled with the code
and finally passed after 3 tries. I value my license more because I had
to WORK for it than if all I had to do was fill out a form and wait.
Nothing you ever learn is wasted.

_
>It's a symptom of today's society: I want it, I

>want it NOW, and I don't want to

>work for it--instant gratification. Unfortunately,

>why don't we just come out and

>say it?

Because we may offend some of the nocodes who live and die by the effort
to move cw.

>What the anti-code code folks want is the

>same anarchy that prevails on

You would exceed 200 watts in a novice band portion?

It's OK for you to break the laws you want, and attempt to interfere
with other's, albeit illegal, communications by transmitting with 7.5
times greater power then allowed in the novice subband?

What are you, some kind of keyclown?

The above argument sucks... ANYONE who values their license "AGREES" to abide by the Rules and Regulations. YOUR argument that the FCC can't go checking all call signs and such is the same as this..... ALL Junior Operators of vehicles at - least here in PA, have to be off the street by a certain time of night and not much before day light can they get on the streets with a vehicle.. SO, will the cops stop EVERY car to see if they are a Junior Operator or NOT? NO, it is impractical.. But it STILL does NOT give you the authority to do as you damned well please. RULES AND LAWS are made to be adhered to.. YOU being a part of the lawless society are more a part of the problem than the solution. TO PROVOKE lawlessness IS a part of the problem. YOUR telling NO CODE techs to go on air without proper license - should the blind sheep follow, is as illegal as the CBers who are there as well. As I said, YOUR ARGUMENT SUCKS. PLUS, 5 wpm code is as lame as you can get. Once you learn the code, taking the test at 5 wpm will seem boring. It will be easier than you think..... THOUSANDS have passed it - myself INCLUDED.. I detect LAZINESS AND LAWLESSNESS. When YOU SIGN A 610 form, now a 605 for an Amateur License, OR any other form for an FCC license or permit, YOU "AGREE" to uphold the rules and laws. READ IT..... A man is only as good as his word, and if you agree to something then fall back on it, you are not a man of good deed. PLAIN AND SIMPLE..... Hell, why not provoke people to break all the laws... Allow anyone of any age, ability or back ground to drink, drive, possess firearms, use radios, whatever... See how long it takes before there is utter chaos. CRAZY, SIMPLY CRAZY..... ONE MORE THING..... when a person ACCEPTS the "agreement" to honor the "PRIVILEGES" earned via that license, they as a rule do NOT or SHOULD NOT talk to those NOT properly licensed. The ONLY exception being for preservation of life.

JMS

I would not do what you're seeking even if there was absolutely no chance at all for the FCC to catch me. When I joined the Amateur Radio community, I made a commitment to abide by the rules and regulations associated with it. That commitment is not based on the FCC's enforcement ability, but my own sense of what is good for this community. I personally benefit from a community that has an equal commitment to abide by the rules and regulations. I therefore would not do anything to upset that situation.

I suspect you will eventually find that most other Technician license holders have a similar commitment to abide by the rules and regulation.

By the way, your statement that "all techs have voice privileges for 28.3-28.5 MHz" is simply not true - only a Technician Plus license holder (a Tech who has also passed the 5wpm code test) is allowed to operate on those frequencies.

s97.301(e) reads:

For a station having a control operator who has been
granted an operator license of Novice Class or Technician
Class and who has received credit for proficiency in
telegraphy in accordance with the international

requirements.

(followed by frequency table)

The 'international requirements' (ITU-R s25.5) now read:

Administrations shall determine whether or not a person seeking a licence to operate an amateur station shall demonstrate the ability to send and receive texts in Morse code signals.

There is no international requirement for proficiency in telegraphy, so arguably any Tech could operate on all the frequencies listed in the table. Be prepared to argue it in court, though!

WRC has dropped the code requirement, the FCC has not as of yet, so
everything is still as before, nothing has changed. What a twit!!

The FCC does not issue technician plus license any more so I guess no one can operate on 10 meters that has passed the tech license test?

Hey Dwight have you ever driven 56 in 55 mph zone?

That is what I'm talking about. There is no longer a international requirement
for morse code so tech's can pick up the microphone and talk on 10 meters.
Here in America the FCC has to issue a warning notice, then a violation notice
and the person cited can then simply demand a hearing before a administrative
law judge. The ALJ is a pretty informal process and you just need to cite the
rules and they are not very strict when it comes to matters like these.
If you have a tech license and you operate outside your allowed bands like pop
up in the twenty meter band and keep it up they might come after you. But if
you meet the international requirements and stay in the HF TECH bands it is not
a violation of the rules and no one can verify if you have passed a horse and
buggy CW test any god damn way.

Keith,
What you don't seem to realize is that the 'rule'
you quoted is NOT law in this country. Until it has
been adopted, it's only a recomendation. So until
the new ITU recomendations are accepted by the US,
nothing has changed.
It doesn't matter if the 'no-code' rule WILL be
changed. Until it IS changed, there is NO change.
The ITU can't change US law, only the US government
can do that. It's okay to be happy about the proposed
code change, but don't be stupid...
'Doc

This is silly. Each country has it's own laws, and you are obliged
to follow them.

What has changed is that the treaty agreement whereby all countries
issuing amateur radio licenses are obliged to have a code test of some
sort for operating below 30MHz (or, was it a higher frequency?) is now

gone.

That means that each country no longer has to conform to that treaty agreement.

They can, if they so choose, to eliminate their law that requires code proficiency for amateurs operating in the HF bands.

But they are not obligated to do so.

Until a country changes it's law about this, everyone is obligated to follow those laws.

Just because the treaty agreement is gone does not mean that there is any more legality for someone who hasn't taken a code test to operate at HF. Two months ago, someone could have done it, and if caught they would face a certain process. If they do it today, and are caught, they face the same certain process. Nothing has changed on that account.

Michael VE2BVW

The 25.5 is automatically accepted by the US Government. The treaty has already been previously ratified. The change is administrative and it is not a new treaty.

Read the regulation. The regulation indicates that according to international
morse code requirements the CW requirement is required. Well the international
regulations do not require a morse code proficiency for HF access.
97.301(e)
I guess it all boils down to what "IS IS".

BTW, what do you care about US regs if you live in Canada?

If the FCC decided to drop CW requirement totally they could still say the
TECHNICIAN is a VHF ONLY LICENSE. Or the could say its a VHF and 28.3-28.5
voice ONLY LICENSE.

In anycase I highly doubt the FCC will give the Technician ticket an
equivilant to a General UNLESS the Tech was issued prior to 1986 when the
WRITTEN was the same for Tech and General.

Get over it Keith.

Thats not the point Keith.

Item one there is no "RIGHT" to the ten meter sub-band to a Technician licensee. It is a PRIVILIDGE. Turn your license over and read that part.

Item two by doing such a thing only proves what us 'coders' have said over and over. Its all about a bunch of CB outlaws that are trying to destroy Amateur Radio by bringing the lawless tactics and attituded to the ARS.

Come to think of it...Go ahead boneheads. Show the FCC we were right.

While not a violation of the international treaty, it would be a violation of the current FCC rules. They are quite clear that Techs (at this time) must have passed a code test to use HF. Keep in mind that the international treaty did not abolish the requirement altogether but simply let each country set its own requirements of any where from no-code to whatever the country wished. Our FCC rules have not yet changed so a codeless tech operating HF is in violation.

No Keith it means that a person that passed the Tech written and the NOVICE
written and that means the 5wpm cw test is allowed on the ten meter
segement.

A Tech written authorizes VHF and above ONLY.

Just dropping the CW test is not all that is required to be allowed on HF.
(This according to FCC rules).

Do you get it now?

First off no one is forcing you to do CW. If you don't want to do it...then
dont. On the other hand many of you non cw types are forcing the rest of us
to lose CW. So who is doing what to whom???

As for the music and CW. Correct. Makes it much easier. Its the rhythm
that does it.

Tap your foot to a 4 x 1 cadence. Then tap your finger on the desk in
sequence with it. Tape it three times and you have a "S" tape it four
times you have a "H" tape it five times you have a "5".

Now do this. Keeping the foot going. Send a "V" di di dit dah.
Keep in cadence. See the rhythm ? great ain't it ?

Only Techs with HF and Tech Plusses (i.e. Techs who have passed the code
under one licensing structure or another) have voice privileges on 10
meters. It would be very easy for the FCC to send out NALs and require that
the suspect people send the FCC a copy of their documentation. The FCC
doesn't have to prove anything. They can place the burden of proof on the

Techs.

You are not on track and are unable to follow a discussion. I am talking about a technician class licensee having tech class HF privileges without the code test. I'm not talking about making them to general.

Don't worry this is going to be reviewed legally very soon.

Your bias against the reference was established even before you knew
the source. If you can't look at the facts objectively then they won't
make any difference. You prove that all the time because of your
attitude that "Da' facts are subject to revision". Regardless, see
below.

<snip>

You want to talk about quality or quantity? About websites or
newsgroups? Do you just want to limit it to the internet, or would a
college thesis count (several, in fact)? How about five years of
formal failure analysis reports? Or more than fifteen years of repair
records? Do you actually think the whole RF world revolves around a
few pages posted on the internet? You are a moron, Skippy.

<snip>
>You got a current mfgr that suggests inclusion of resistors and
>caps in a current generation of common rectifier diode strings

>found in rf amplifiers.? Say the 1N5408 as an example..?

Within five minutes on alta-vista I found two:

http://www.vishay.com/docs/rect_apnote.pdf
(formerly General Semiconductors, bought out by Vishay)
http://www.st.com/stonline/books/pdf/docs/3581.pdf
(ST = SGS Thompson)

...as well as a few other articles:

http://www.radioelectronicschool.com/reading/reading20.pdf (page 10)
http://www.chipcenter.com/power/powa043.htm
http://straylight.cso.niu.edu/repairfaq/sam/laserclp.htm
(A Treatise on Designing High Voltage Rectifiers)

Your buddy Measures read the ARRL notes regarding manufacturing tolerances in semiconductor manufacturing, but what he didn't mention on his webpage was that while many rectifiers from the same lot may have matching characteristics, using rectifiers from the same lot doesn't necessarily mean they are matched. And because silicon semiconductors have a negative temperature coefficient, they need to be CLOSELY matched for power applications, EVEN IF they are from the same lot! The cost of matching power rectifiers to save a couple cents in resistors isn't cost-effective in manufacturing, and isn't very practical or reliable for the average homebrewer. Not only that, but any manufacturer must consider that if one or more rectifiers should fail, there is no guarantee that the servicing technician has a rectifier that matches the remaining set, or even that he has easy access to a matched set for a full replacement. So it's a poor engineering practice in that respect as well.

But if you think that not using voltage equalization makes you look like a hot-shot, then go for it -- you aren't gambling with MY money!

<snip>

>depression laden posts. Nothing is ever going to make you happy
>and you wont post the locations of your touted reference material.

That's what I thought -- more excuses because you can't support your own bogus claims. Probably just another lie, like your license for the IB service, and your claim that you found my FCC files. You can't provide the proof so you use the typical lame excuses just before you bail. Well then leave already, Skippy. What are you waiting for?

<snip>

>off topic diversions and cannon fodder you like to throw at people.

Then "debate and discuss the issues" here, Skippy. Don't just tell me
that something works because someone posted it on a listserver (then
tell me to go look it up myself). If you want to reference someone
else, post the words and the credentials, don't just say "someone said
so, go look it up".

>> to me... not.
>
>Possibly one issue of a larger picture, but not given as the only one.

You sure do get wishy-washy when faced with logic, Skippy. Like with
the lack of neutralization in a grounded-grid amp you claimed that
reduced Cgp and 'grid screening' were responsible, nothing else. But
when I logically proved you wrong you suddenly said, "there are other
reasons". Well, you haven't provided any other reasons. And I don't
expect you to elaborate on your "larger picture" regarding the 8877,
either.

>When all your previously mentioned "ifs" are out of the mix, an 8877
>built as described in the example is stable without anode parasitic
>supressor(s). It's that simple...

Then it's just as simple to say that "if" the grid circuit is free
from resonant conditions (an impossible condition), or "if" there is
insufficient coupling to any grid circuit resonance, or "if" there is
adequate screening between the plate and grid circuits, or "if" the
grid is shunted with an anti-resonant trap, or "if" there is
sufficient plate-to-ground capacitance at the plate, etc, etc, then
the amp is stable. There are your "IFs", Skippy.

<snip>

>
>You make my point... only contributing factors of a larger picture.
>Each tube has different values... the 8877 values are dealt a good
>card by design.

Do you even realize how hypocritical that sounds? First, in order to
explain why some tubes are prone to parasitics, you say "Simple,
internal values of C and L and the tube geometry". Then after
realizing the truth that tubes are not the only cause of parasitics
you suddenly say "only contributing factors of a larger picture". Very
wishy-washy, Skippy.... No, not even that -- just more proof that you
don't know what you are talking about. So is "a larger picture" your
catch-phrase for this week, Skippy?

>> >Old information, no one claims it's inaccurate. Are you trying to

>the typical grounded grid amplifier does away with neutralization.

How? You still haven't explained how your "reduced Cgp" contributes as
a reason why the grounded-grid amp doesn't require neutralization. The
fact is that you can't because it's not a factor. If you think I'm
wrong then explain HOW it IS a factor.

>> >> screen grid is effectively grounded (unvarying DC potential) in a

No smoke screen. What is your "larger picture"? It seems to be your
most current catch-phrase for things you don't understand, because you
certainly don't seem to have any other explanations other than "it's
part of a larger picture". Quit with the mumbo-jumbo and address the
issues, Skippy!

<snip>
>> >Effective C is also reduced when you apply that tetrode to grounded grid

>
>I know of no commonly accepted practice of placing grids to plates in
>RF amplifiers... maybe you could point out EVEN ONE example. Let
>me rephrase that... EVEN ONE WORKING EXAMPLE...?

Are you so desperate that you STILL need to rag on that issue? Or do I
have to point out once again that I spoke of tying the SCREEN to the

plate, NOT the grid? Actually, I don't think that would be such a bad idea, now that I think about it. It would certainly improve the amplification factor of the resulting triode (over grounding the screen), but the grid current would have to be watched very closely in Class AB2. It might just work pretty good in Class C... maybe one has already been built. I might just get back to you with that example...

>If you examine most of the current generation / production amplifiers,
>you (or most everyone else with their eyes open) will probably
>notice the lack of equalization networks on the rectifiers. ITS
>NOW COMMON TO OMIT THEM as they are not required. ie dated technology.

If YOU actually examined most of the modern equipment that uses HV power supplies (RF amps included), you would have -definitely- noticed the use of RECTIFIER MODULES, which are series rectifiers with built-in voltage equalization resistors. No matter how much you whine that it's not true, your "dated technology" is still current, valid, and practical.

<snip>
>> Save us all some time and quote your reference.

>> of the window under your catch-all excuse that it's "dated".
>
>What is the date and edition of the book...? after you actually
>tell us the name you so cleverly withheld.

I have used that book for a reference in this newsgroup many times
(among others). I concealed nothing. And as a matter of fact, the date
of the book indicates that it is one of the last textbooks to cover
vacuum tube electronics in depth, which means it's about as up-to-date
as you are going to get on the subject.

But you don't even need a reference on the subject, Skippy -- you just
need a brain. Let's start with a basic grounded-grid triode:

When the input signal pulls the cathode to it's most positive, then
the cathode-to-plate current is minimum, and the power supply will
pull the plate to it's most positive potential. The positive potential
of the plate is going to have the effect of pulling electrons into the
cathode, but because there is little cathode-to-plate current, the
majority of electrons attracted by the plate create a log-jam in the
cathode. Therefore, the plate (output) causes an opposing potential on
the cathode (input). But when the cathode is at it's most negative,
the current is maximum, and the plate drops to its lowest positive
potential. Note that the plate is still positive with respect to the
cathode. But because there is a significant flow of current, the plate
tends to pull the cathode more POSITIVE by pulling the electrons OUT
of the cathode.

The overall effect is DEGENERATIVE FEEDBACK.

Maybe you now see that it is the PHASE of the grounded-grid amplifier
that is responsible for it not requiring neutralization, NOT "grid
shielding" or "reduced Cgp". You might even say that a grounded-grid
amplifier is 'self-neutralizing'. The only time a grounded-grid
amplifier needs neutralization is when the frequency becomes so high
that the inductive reactance of the leads becomes significant enough
to mess with the phase.

<snip>
>> But still no evidence that supports your claim that the tube is immune
>> from parasitics.
>
>Examples and supporting information from experts in the field, posted
>within the last month at www.contesting.com

You STILL don't understand that the tube is not responsible for
parasitics. Try this link, Skippy:

http://www.cpii.com/eimac/PDF/C&F3Web.pdf

I'll be waiting to see how you flip-flop over another Eimac page: will
you cannonize the former Eimac engineer that supposedly wrote this
book, or will you dump on the company about their "issues"? I'm
betting the latter because the information doesn't agree with your
theories.

Hey, here's an idea, Skippy? Why don't you get a job with Eimac and
'revise the facts'? LOL!

<snip>

Good grief.... The audio bandwidth (for CB) is the same -- 0.3 to 3 KHz. The RF bandwidth of AM is more than twice the witch of SSB because it covers from 3 KHz below to 3 KHz above the carrier, and therefore picks up more than twice the noise as SSB.

>:> Add that with the clarifier knob requirement of SSB

>
>No two unmodified radios are on the same exact frequency. Given a group of stock radios, some will be either side of
>the assumed channel center.

You don't need the radios to be on the -same exact- frequency, just really close. And the DEVIATION from that center frequency in an unmodified radio isn't significant as long as the radio has been properly aligned and maintained. Ever hear of a 'bell curve'? You and Tnom should get together and form a study group on that subject. And if you -really- want to pick some nits, you two should also study some things about temperature compensated crystal oscillators (TCXO's), PLL frequency synthesis using dual-modulus prescalers, the frequency response of the human ear and it's variation between different people, the psychology of sensory perception, etc.

>: Duty cycle is the ratio of transmit time to receive time. Modulation percentage
>: doesn't use receive time as a factor.
>
>It's more than than just Tx and Rx times...

But receive time has NOTHING to do with modulation percentage! Is that so hard to understand? Sheesh....!

>: Power microphones, audio processors, modulation limiters... things that change
>: the peak-to-average modulation ratio... all will be discussed soon.
>
>Opinions will vary quite a bit...

Opinions are like assholes -- everyone has one and they all stink. I don't plan
on discussing opinions. Just facts. And when people have the -facts- they can
make their -own- opinions based on the -facts- instead of relying upon the
uneducated opinions of some wannabe-tech keyclowns.

benefits with the trade offs.

And the person that is making such a comparison should have all the facts
available, such as the power and efficiency benefits of SSB over AM. Gee, we
agree on something else!

>: No, they aren't similar at all, because I have never heard of a detection scheme
>: where the "voltages of the two sidebands are added in the detector". Care to
>: reference that one?
>

>sure:
>http://dj4br.virtualave.net/ssb3e.htm

Next time you plagiarize a ham you better verify his 'facts' first -- here is a
site that does an excellent job of explaining 'coherent detection':

http://www.qsl.net/dj7hs/ccwtheo.htm

BTW, did you notice where he talked about SSB and how the frequency of the
reinserted carrier "may be in error by 100 cycles or more without serious loss
of intelligibility"? That kinda puts the crimp on your "same exact frequency"
complaint.

>: Time for another lesson: You can look at AM in two ways. One way is in the
>: frequency domain, with a carrier of constant amplitude and the modulation
>: carried in the sidebands. The other way is in the amplitude domain, in which the
>: carrier varies in amplitude according to the modulation (which is where the term
>: "Amplitude Modulation" originated). Envelope detection works in the amplitude
>: domain by passing the rectified RF or IF signal through a low-pass filter. And
>: in case you didn't notice, a diode detector blocks half the modulation power!
>
>Depends on the detector type... there are more than single diode detectors, even for AM
operation.

When was the last time you saw a full-wave AM detector?

>: 0.072 / 3 = 0.024
>: 0.02 <> 0.024
>
>http://dj4br.virtualave.net/ssb3e.htm

God damn, Skip, how dumb can you be? You just copy the stuff without any
comprehension of what it means? His figures of 0.12 and 0.072 are just typos;
they are supposed to be 0.1 squared and 0.07 squared:

0.1^2 = 0.01
0.01 / 6 = 0.00167

0.07^2 = 0.0049
0.0049 / 3 = 0.00163

And they STILL aren't equal because his 'arbitrary' level of noise voltage
wasn't picked arbitrarily -- it was cooked and rounded from the intended result!
Didn't I suggest a long time ago that you should quit relying solely on the
internet for your education? I'm pretty sure I did....

Well, let's see... If the sidebands are added in the detector, then so is the
broadband noise with each sideband. So you have twice the noise bandwidth, and
therefore twice the noise power. RE: above references, but if those are too
complicated try this one:

You might do that yourself to notify him of his mistakes in both theory and mathematical notation. Then spend a few hours at your public library reading some -qualified- material on these subjects. You might start with the ARRL's "Radio Amateur's Handbook", which disagrees in every topic you have referenced from your source.

NO! This is what the rules say:

s97.301(e) reads:
>
> For a station having a control operator who has been
> granted an operator license of Novice Class or Technician
> Class and who has received credit for proficiency in
> telegraphy in accordance with the international requirements.
> ^^
> (followed by frequency table)
>

Now we have the new regs from WRC that are NOW in effect. They require no morse code test except set down by the administration so a tech licensee should be in compliance with the requirement set down in 97.301(e) There is no requirement for morse code test except for the requirement by the international morse code requirements.

> The 'international requirements' (ITU-R s25.5) now read:
>
> Administrations shall determine whether or not a person seeking a licence
> to operate an amateur station shall demonstrate the ability to send and
> receive texts in Morse code signals.
>

The ARRL tried to pull a fast one, but the way the FCC rules are written it appears that it doesn't hold water with current regulations as set down by the FCC.

Don't worry I'm going to get real legal advice on this.

1. FCC requires compliance with international morse code regulation.
2. The international morse code regulation is changed to something completely different and no longer has any morse code proficiency requirement except what the administration of that country requires.
3. The FCC, the administration of the USA, only requires the tech licensee to comply with the morse code proficiency requirements required by international requirements.
4. The international requirements have no requirement to know morse code.

This could be a legal loop hole.

Do you actually think that I'm buying that, Skippy? Not a chance.

<snip>
>How many of them are currently making rf amplifiers like the
>example..? How many, if any current rf amplifier manufactures use a
>specific sequence relay in their circuits..?
>
>The answer is close to if not zero... back ye heathen with
>thy dated technology. Chase ye not windmills in this here land.

More than you think, Skippy. Any good designer of common-cathode
tetrode/pentode amps will add a sequenced relay specifically to make
sure the screen is last-on-first-off (when the screen supply is
seperate from the plate supply).

>> >A relay "Sequencing" notation seems to be missing from the circuit
>> >diagram. You are again chasing windmills...
>>
>> And you are having a hard time with your reading comprehension: see
>> above where I said, "Schematics don't usually indicate when a relay
>> operates in this way". Regardless, sometimes the sequencing is done
>> with two relays, and sometimes with one relay using different contact
>> gaps. But you will be hard-pressed to find a schematic that makes any
>> notation about the latter. Anyone that has ever done any amount of
>> radio repairs knows exactly what I am talking about. It's obvious that
>> you don't.
>
>Remember mr off topic.... the original amplifier circuit in question has
>one relay.

I never said it wasn't, Skippy. I guess I have to rephrase this a
third time so you can understand it: Adding extra gap to a pair of
contacts in a relay (by slightly bending the amrature) has the same
effect as using two sequenced relays.

>Other than you gassy cloud sequence story, can you provide any
>modern rf amplifier circuit using a sequence relay...

I'm willing to bet that the amplifier in question does.

> or any mention
>of bending relay armature contacts or using said type of relays in
>their respective parts/owners manual.

You probably won't see such a notation in any owner's or service manuals since these relays are typically ordered from the manufacturer with the specified gap (or 'contact delay' -- same thing). All you get from a service manual is the replacement part number. Replacing one of these with a general-purpose relay -without- checking the contact gaps on the original can lead to some serious trouble (and I learned THAT one from experience).

>Why is it not widely mentioned in modern manuals and text books..?

Sequential relay circuits ARE mentioned in many manuals and text books, even in the ARRL manuals. It's up to the designer to choose how best to implement the circuit.

>> >Your bent armatures suggestion is bad news.
>>
>> Such "bad news" that the practice has been used by almost every
>> manufacturer of transceivers since they were invented? Right. Uh-huh.
>> Ok. Next you are probably going to proclaim that relays are "dated
>> technology". Sure thing, Skippy. Whatever you say.
>
>The subject was a simple rf amplifier circuit... you just want to dance
>the night away on off topic poop again.

Why are they "bad news", Skippy? And if they are "bad news", why have they been used for decades?

>In regards to transceivers... rather than the stupid practice of hosing
>relay contacts... Motorola, GE, RCA and EF Johnson (along with most
>other mfgrs) simply delayed the RF long enough for the antenna relay
>to transfer.
>
>If you ever had your face in any of their manuals, you'd see delayed
>A+ and A- functions doing the task. Hey, what a concept..! In
>specific, see "channel element ground" functions.

Those are common practices with diode switching circuits. Sequential relays accomplish the same thing, and when a relay is going to be used in the circuit it's much easier to gap a pair of contacts than it is to construct a power line delay circuit (which usually won't provide for the disconnection of the RF final before it powers down, burning out the relay contacts before their time).

To verify my statements, all you need to do is to find an old radio that uses a T/R relay, take off the cover and look at the gaps. If you don't have an example of your own, email me your address and I'll send you a whole box full of old T/R relays from a wide variety of radios that use gapped contacts. Some of them have bent armatures and some of them have armature spacers, but all of them were built with the same objective -- a sequential relay.

>Yeah, cranking on relay armatures is pretty bad news... especially
>since many of them are sealed reed relay types. But you knew that
>and obviously holding back to see if I'd mention it... yeah right.!
>
>Hard to crank on a reed relay when its sealed. Yeah baby..!

Reed relays don't carry RF very well. And they certainly don't carry
power because it tends to vaporize the Hg and destroy the relay. They
are usually only used for low-voltage DC and audio switching. But you
knew that, didn't you Skippy?

>> >> And the real issue with the relay in that amp is the fact that there
>> >> is only one for both the input and output. If there is one thing that
>> >> Pride got right with their 100 is their use of seperate input and

>> >ZZZZZZZZZZZZzZzzzzzzzzzzzzzzzzzzzzzzzzzzz.....!
>>
>> Gee, another "I don't care" response.
>
>One wonders why your so hot to tell your stories to me... when you
>should be sharing another of your famous verbose analysis with
>the original author. I promise not to laugh too hard if you do.
>Just leave out the equalization networks...

I have had several discussions with Brian on many of the issues he
raised with this amp, including the use of a single relay. He was
right on the money with everything he said and I don't think he should
have stopped when he did. He has learned good information from those
discussions, although I didn't think he ever would at the time. You
should follow his example, Skippy.

By your interpretation, every ham in the world can start operating
on HF, no matter what their license restricts them to, merely because
the international agreement on this matter has been rescinded. Your false
interpretation would therefore apply to all countries. Besides, you
posted in newsgroups that are read by people in many countries, so
why shouldn't I comment.

The international agreement does not set the rules. While except for
Japan with their low power license I can't think of any country that
did not respect the treaty agreement, there wasn't much to keep countries
from not honoring the treaty, other than on a diplomatic level. If
someone operated on HF without passing a code test, they weren't
prosecuted by an international body, they were pursued by their
own country's enforcement body, which also set the rules that
the person was violating. Each country had to put in place rules that
reflect the agreement.

Those rules are still in effect, until they are changed.

"We had to put these rules in place because we honor the international
treaty."

That's a big difference from "You have to know morse code or else the
international boogy man will come down and toss you in jail".

The first is about implementing rules that honor an international agreement.
The second is some international law that you must respect directly.

Find some other section of your rules, and you're bound to find something
that tells you you can't operate HF with certain classes of licenses.
That's the rule that is in control. It's absolute, and not dependent
on some international treaty.

When I was a kid, there was no license here in Canada that let someone
operate without taking a code test. Some likely argued that the code
test was there because of the international agreement, but the rules
were quite clear, you couldn't operate unless you took a test, and part
of that test was a code test. Back in 1978, there was a code-free
license here, but only useable at 220MHz and up, and had a lot of
digital questions. The rules were clear; if you got that license
you could only operate on those VHF frequencies. Back in 1990, there was
restructuring, and there was a license which did not require a code test;
but it was also clear in setting out where you could operate.

For that matter, the US Technician license originally was VHF and UHF
only, yet there was a code test. Your FCC decided it was a necessary
requirement, even if the treaty did not require it in that case. It
was only in more recent decades, when 10meters was added, that the treaty
required a code test. Take away the code test, and the FCC limited
such licenses to VHF and above.

No, the rules are what counts, not some preamble.

Only according to FCC regulations in regards to the s25.5 change.
I can't speak for other countries regulations. I only have what the FCC
regulations are today.

The FCC rules are based on that international requirement.
Now the FCC could have said you must pass the 5 wpm test to operate on HF
frequencies. But they said based on the international proficiency requirements
a tech can operate on HF.

Today there are no international proficiency requirements for morse code.

This one was such an obvious troll it was pitiful, but I'l bite
anyway, just in case someone's on the verge of letting their emotions
overcome their common sense.

On Thu, 24 Jul 2003 01:54:43 -0700, morse@code.is.dead wrote:

> Let the FCC know that they can no longer keep you from your right to use the
>ten meter band allocation if you are a technician licensee.

What "right" is that? Freedom of speech, freedom of the press, and the
ability to vote are rights. The use of then ten meter band - or any
other part of the amateur radio allocations - is a privilege. There is
a difference: Rights are due all Americans regardless of race, creed,
color, etc. Privileges are due only to those who've earned them.

>The international
>requirement for morse code has been removed and there is no such thing as a
>technician plus license.

Nevertheless, Technician class licensees who have credit for Element 1
receive the same HF privileges as the former Tech+ license granted -
which are the same HF privileges the former Novice license granted. No
Element 1 credit, no HF privileges - yet. That's subject to change now
that WARC changed the international requirement.

> You don't have to use your identity,

Meaning what...go on the air where you have no privileges and fail to
identify your station? Yeah, right. You expect others to do that, yet
you yourself are so chickenshit that you have to post anonymously.

>but no code technicians need to finally
>speak out to the FCC they will no longer be oppressed by rules designed for the
>stone age of electronic technology.

Then file a petition with the FCC to have the testing requirements
changed to reflect the changes WARC implemented in the international
requirements.

> Get on the air at 6pm local time on August 1st or if the band is open any time
>to make contacts in the 28.300-28.500 MHz that is allocated to technicians for
>voice. Or if you have a computer you can use the allocated technician CW bands
>to send and receive morse code.

Unless you have Element 1 credit, this is contrary to current FCC
regulations. The licensing requirements are THIS --> <-- close to
being changed in your favor. Any no-code Tech who jeopardizes his or

her license by taking your "advice" is a bigger fool than you are.

> Currently the FCC and ARRL want to drag this morse code requirement out for
>one or two years while they put BPL and other technology on the fast track.

...and so instead of working through the system and seeing if you can
shorten it to six months, you expect people to risk losing their
licenses entirely so that they never get on HF? Well, one thing's for
sure, you ain't Mensa material.

> I will be on the air

I hope you have a license that grants you privileges to be on the air
wherever you operate

>and I hope 10,000 or more no code technicians will join me.

I hope they won't.

>I guess Hollingsworth will have to require 10,000 people to turn in their CW
>proficiency certificate if YOU will join us.

To hell with that...he should have you turn in your license instead,
and then he should run it through the office shredder.

> The morse code game is over and I'm not driving 55 when the speed limit is
>really 70 mph and the government hasn't changed the signs yet.

Trouble with that is, to continue your analogy, the speed limit is
still 55. When it becomes 70 the signs will get changed. That hasn't
happened yet.

>Just go by the limitation of your technician license

...which means no HF privileges unless you have Element 1 credit...

>and don't go overboard,

If operating outside the privileges your license grants you isn't
going overboard, I'm afraid to ask what is.

>we want to show
>that just because we didn't pass some dinosaur morse code test that we are bad
>operators.

And so far, nobody's said that you are. However, once you deliberately
overstep the operating authority granted to you by your license, then
you will not only be a bad operator, but also a pirate.

> Get on 28.306 USB at 6 PM local time to talk with other no code tech's that
>are protesting the FCC and ARRL stupidity.

...by demonstrating gross stupidity on your own part? That's
original...since when do two wrongs make a right? If you're dumb
enough to risk losing your license this close to the end of code
testing, I hope they throw the book at you - huge fine, all your

equipment confiscated, the whole nine yards.

I have no doubt that there are people out there who have waited years and years to get on HF without taking a code test. After all that waiting, it would be really tragic for them to lose their licenses on the eve of finally getting what they've been waiting all that time for. Major dumb move...I can only hope the rest of the Technicians without code credit have more sense than you're displaying here.

>First off no one is forcing you to do CW. If you don't want to do it...then
>dont. On the other hand many of you non cw types are forcing the rest of us
>to lose CW. So who is doing what to whom???

What? "many of you non cw types are forcing the rest of us
to lose CW"

If the CW requirement is gone you can still do CW.

Who is forcing who? Is someone being forced when CW is a
requirement, or is someone being forced when someone else
believes that the CW requirement should be dropped?

1492. Re: Understanding the Possible Legal Hassle of Ignoring Rulz

Why don't petition the FCC to ask them if techs can now
use the novice portion of 10 meters. When the official
R&O comes out stating that I can, I will be on as soon
as it's legal, not one minute sooner, unless I learn CW.

I'm going out to enjoy a Friday night. Hamfest on Sunday.
Troll your heart out, Keith from Newsguy, that removed
his email from his killerwatt-radio web site, put all kinds
of strange sh!t in his meta-tags, and just basically puts
the same BS on his web page as you see here. Save yourself
a trip, folks, don't click his link. His attitude matches
that of Stew's!!!

:>You win frankie... I'm about done wasting time replying to your
:>off topic jabs. Nothing ever makes you happy... the majority
:>of all your posts to everyone have been very negative and rude.
:>In short, you are time wasting loser.

And nothing has changed...

: the facts, running out of excuses for your voodoo theories, and all

Who'do voodoo..?

: Your bias against the reference was established even before you knew
: the source. If you can't look at the facts objectively then they won't
: make any difference. You prove that all the time because of your
: attitude that "Da' facts are subject to revision". Regardless, see
: below.

I believe we had to ask many times before you would even cought up a
reference.

:>I trust the statements made by the original authors, well over
:>the lack of any material you have posted. Where is "any
:>material" you might have posted..? ... anywhere..?
:>yeah, we didn't think so... little or nothing is what we
:>see from you.

And we have yet to see any of your publications or materials posted on the
web... with the exception of your news group rants.

: You want to talk about quality or quantity? About websites or
: newsgroups? Do you just want to limit it to the internet, or would a
: college thesis count (several, in fact)?

College name..? Subject..? Basket weaving 101..?

: How about five years of
: formal failure analysis reports? Or more than fifteen years of repair
: records? Do you actually think the whole RF world revolves around a
: few pages posted on the internet?

More than just writing reports... analysis reports and repair records on
what subject..? basket weaving 101 again..?

: <snip>
:>You got a current mfgr that suggests inclusion of resistors and
:>caps in a current generation of common rectifier diode strings
:>found in rf amplifiers.? Say the 1N5408 as an example..?

: Within five minutes on alta-vista I found two:
: http://www.vishay.com/docs/rect_apnote.pdf
: (formerly General Semiconductors, bought out by Vishay)

Yep, page 6 of the above text pretty much sums its up... "Rectifiers can be connected in series without external components... " You lose...

For those just joining in on the fun... I along with others claim that the resistor-capacitor parts placed in parallel with diodes in a typical HV amplifier supply are for the most part; suggested from dated technical material and not required when using modern generation rectifiers.

: Your buddy Measures read the ARRL notes regarding manufacturing
: tolerances in semiconductor manufacturing, but what he didn't mention
: on his webpage was that while many rectifiers from the same lot may
: have matching characteristics, using rectifiers from the same lot
: doesn't necessarily mean they are matched.

Note the words "matching characteristics." Did he claim they were matched..? anywhere..?

: And because silicon
: semiconductors have a negative temperature coefficient, they need to
: be CLOSELY matched for power applications, EVEN IF they are from the
: same lot!

Suggested, not required. Have you taken the subject up with Rich..?

: The cost of matching power rectifiers to save a couple cents
: in resistors isn't cost-effective in manufacturing, and isn't very
: practical or reliable for the average homebrewer. Not only that, but
: any manufacturer must consider that if one or more rectifiers should
: fail, there is no guarantee that the servicing technician has a
: rectifier that matches the remaining set, or even that he has easy
: access to a matched set for a full replacement. So it's a poor
: engineering practice in that respect as well.

You bore the hell out of me Frank... sorry to everyone else, but I had to say that.

Matching power rectifiers is rather straight forward. Parallel Caps and Resistors in the rectifier bank generate unwanted heat along with other serious issues. Others including Rich and myself feel they are not required when using current generation rectifiers, indeed.. they are bad news and potential sources of trouble.

: But if you think that not using voltage equalization makes you look
: like a hot-shot, then go for it -- you aren't gambling with MY money!

You are not building amplifiers for the most part... only generating news group cannon fodder.

: <snip>
:>> The 8877 is a very well-designed coaxial-type tube that is capable of
:>> operation well into the GHz region. As with any other tube, if there

:>> is no parasitic supression, any lead from the plate to the tank input
:>> capacitor is going to act like a radiator. If there is enough
:>

:>> condition in the input circuit, the amp will oscillate, and it will do
:>> so at the frequency of the resonance being excited by the plate lead.
:>
:>There is no "IF" in the example conversion 8877 amplifier described
:>on the list server. It is stable without anode lead parasitic
:>supressors.

: I have a shorted resistor sitting on my shelf but that doesn't mean
: I'm ever going to find another. Seems to me that you greatly improve
: the odds against parasitics by the little bit of money and effort it
: takes to include some low-Q supression. But like I have said before,
: it's your money, not mine.

If you research the amps list server archives.... you'll find posts by
well known authors and engineers currently working in the industry who
clearly state the 8877 is a stable design without an anode lead supressor
circuit. One of the mentioned authors designs and builds broadcast
and high powered rf amplifiers all the time. See posts made by Ian G3SEK
and John Lyles for details of said.

About the time you and I were last dancing about the 8877 debate was when
subject was mentioned on amps and the supporting information was included.
Go look it up...

:>> Now because of the high operating frequency possible with that tube,
:>> combined with the ease of unintentionally creating UHF resonant
:>> conditions in just about any circuit, and the fact that such short
:>> wavelengths can sneak through chassis holes and even mesh screens, it
:>> would be plain foolish to not include even just a low-Q supressor at
:>> the plate.
:>
:>"Sneak"..?

: Don't like my choice of words? How about "nanny nanny boo boo"?

Reads and sounds a lot like "sneak".

:> Foolish in your opinion which carries little weight
:>in this news group or the amps forum. The mentioned 8877 amplifier
:>works well, is stable and the reasons for said are described
:>on the list server. Your opinion is contrary to those of at
:>least three well known leading edge Engineers and/or Authors working
:>in the industry. You lose...

: The posts on the list generally disagree with you. And I'm not in a
: discussion with your experts, so if you want these people to speak for
: you then bring them into the newsgroup. Otherwise, address the issues
: as though you can actually think for yourself.

The amps list server is a much better technical forum with peer review. We seem to be missing any technical posts there made by you.

I'll have to go review "the posts on the list which generally disagree with me". I seemed to have missed them somewhere.

:>> You should have gotten a clue from reading the thread where someone
:>> built an amp with the 813 and left off the parasitic supressor because
:>> the VHF gain of the tube is poor. What happened? He got parasitics in
:>> the low VHF range and nuked his tube.
:>
:>Nice off topic try... We are and were talking about the design
:>and construction of the 8877 and the reasons why it is stable in a
:>well built circuit, without anode suppression.

: Your 'reason' was that it doesn't need parasitic supression because
: your amp gods say so. That's pathetic, Skippy.

I seemed to have missed that statement "because my amp gods say so". You just wander all over the place... If you try to stay on one specific topic, we can clearly show you how big a boob you really are.

: <snip>
:>> >You present any source material or text directly related to the
:>> >subject.... and we'll go over it. Otherwise, your still just

I don't need to petition the FCC. I need a legal opinion from it. Of course,
time will tell where this goes.
Discussing and protesting rules is not ignoring them.

your premise is flawed because you do not take into
consideration the entirety of ham radio. ham radio is
what it is because it is filled with a rich texture of history
and experience. Like the Kentucky Derby and
Wimbleton , for example. There are plenty of horse
races and tennis tournaments , but only one " ham radio.
(is this too complicated for you ??) The first attempt at a
codeless radio license resulted in Citizen's Band. Popular
in the '70s but wasted away to what it is now ... and include
the newer citizen's bands into this too. This , plus many people
are frequently too LAZY (or poorly motivated < yourself perhaps >
to continue the rich tradition of morse in HR) and eliminating the
morse requirement would " definitely " force the eventual end of
CW on the bands.
There are PLENTY of non morse opportunities , currently , in ham
radio (too many for my tastes) .... taking away the morse
requirement completely , would mean the end of the rich tradition of
hamming and rob everyone (that comes after) of the history and rich
experiences that morse can bring. (ever heard of " wolf hung ???
I doubt it ...!! understanding the spirit of woulf hung resolves it
all)
Ham radio without morse is NOT REAL hamradio ... it's " radio "
minus it's rich history and texture of life.

there I said that ......

dusty
k4nlz

morse is joyous and something EVERY serious ham radio enthusiast
should learn the love (of radio) with-in . the ethereal bliss of
morse communication " cannot " be merely spoken of , it must be "
personally " (internally) experienced to be fully appreciated.
traditional " ham radio " is NOT really ham radio without it. if
you have experienced this bliss personally , you understand
completely , if NOT ... you do not fully appreciate ALL that ham
radio offers. either you " have , or you are still not " there "
yet. there is FAR more to morse than many people appreciate or
understand ... I highly recommend that you experience it for yourself,
completely , ... then YOU will understand also. (and be MUCH
richer for the experience)

Whoa!!!

Per the FCC website:

"Technician
The privileges of a Technician Class operator license include operating stations while transmitting on channels in any of 17 frequency bands above 50 MHz with up to 1,500 watts of power. To pass the Technician Class examination, at least 26 questions from a 35 question written examination must be answered correctly. A Technician Class licensee who also has passed a 5 words-per-minute (wpm) telegraphy examination receives privileges in four long distance shortwave bands in the HF range (3-30 MHz) (Refer to Section 97.301)."

So, Techs don't have phone privileges from 28.3-28.5. Not only that, they don't have voice priveleges *anywhere* below 50 MHz.

It's Ok Skipp, I've been in contact with
you concerning some questions on Swan equipment.
You answered them quickly & courteously.

Landshark

What a load of rubbish.
Are you really as stupid as your reply suggests - or are you just giving any b*llsh*t in an attempt to scare someone?

Taking two examples:
Channel 3a = 26.995 MHz.
This is 10KHz from channel 3 and 10KHz from channel 4.
Channel 7a = 27.045 MHz.
This is 10KHz from channel 7 and 10KHz from channel 8.

The same 10KHz applies to all 5 of these "a" channels.
10KHz is the standard spacing between CB channels.

So, they will cause no more "splatter" than using any legal adjacent channel.

Brainbuster.

Actually, this could be read in another way:

Since there is no international requirement that one can be in accordance with,
then the regulation is no longer operative at all and that means that novice
licensees and technician licensees with code credit have NO privileges below 30
MHz at all! :-(

International agreement has killed the "coded technician" license and has made
it indistinguishable (in operating privilege) from the "no-code technician"
license. ;-)

> the administration of that country requires.

Then is it still an "international morse code regulation?"

> 3. The FCC, the administration of the USA, only requires the tech licensee to

Of which there is no such thing, so there is no longer a "technician" license
that has any privilege below 30MHz.

> 4. The international requirements have no requirement to know morse code.
>
> This could be a legal loop hole.

But not the one you think! 2x :-)

CBers are folks who operate in the Citizens' Band Radio Service on
frequencies allocated to that service under Part 95.

Folks who operate on frequencies where they have no business being are
called "pirates" or "bootleggers" (and some other names that I won't
print here because they might offend someone's sensibilities).

>that information to anyone.

Yes, there is a way to tell. If you passed Element 1 you were given a
CSCE for it. Now that FCC no longer keeps track in their database of
who has Element 1 credit and who doesn't, it is incumbent upon the
licensee to retain that CSCE as proof that you passed a code test. If
you're heard operating on HF and FCC asks you to prove that you have
Element 1 credit and you are unable to do so, you're subject to
enforcement action up to and including the loss of your license.

> It is a great big loop hole and a great way to protest stupid radio rules.

No, it's a great way to lose your license.

Then you must have a very blissful existence, Keith. Read on, and let
the facts rid you of your ignorance as I show you numerous references
to the Technician Plus license in the FCC rules. When you're done you
can check to verify that I haven't falsified any of this by going to
http://www.arrl.org/files/infoserv/rib/part97.txt and reading Part 97
for yourself - which you should have done in the first place so that
you had your facts straight BEFORE you opened your mouth to change
which foot was in it:

ï¿½97.5 Station license grant required.
<snip>
(2) A club station license grant. A club station license
grant may be held only by the person who is the license
trustee designated by an officer of the club. The trustee
must be a person who holds an Amateur Extra, Advanced,
General, Technician Plus, or Technician operator license
grant. The club must be composed of at least four persons
and must have a name, a document of organization,
management, and a primary purpose devoted to amateur service
activities consistent with this part.

ï¿½97.9 Operator license.
(a) The classes of amateur operator license grants are:
Novice, Technician, Technician Plus (until such licenses
expire, a Technician Class license granted before February
14, 1991, is considered a Technician Plus Class license),
General, Advanced, and Amateur Extra. The person named in
the operator license grant is authorized to be the control
operator of an amateur station with the privileges
authorized to the operator class specified on the license
grant.

(b) The person named in an operator license grant of Novice, Technician, Technician Plus, General or Advanced Class, who has properly submitted to the administering VEs a FCC Form 605 document requesting examination for an operator license grant of a higher class, and who holds a CSCE indicating that the person has completed the necessary examinations within the previous 365 days, is authorized to exercise the rights and privileges of the higher operator class until final disposition of the application or until 365 days following the passing of the examination, whichever comes first.

ï¿½97.17 Application for new license grant.
(a) Any qualified person is eligible to apply for a new operator/primary station, club station or military recreation station license grant. No new license grant will be issued for a Novice, Technician Plus, or Advanced Class operator/primary station or RACES station.
<snip>

ï¿½97.21 Application for a modified or renewed license.
<snip>
(3) May apply to the FCC for renewal of the license grant for another term in accordance with ï¿½1.913 of this chapter. Application for renewal of a Technician Plus Class operator/primary station license will be processed as an application for renewal of a Technician Class operator/primary station license.

ï¿½97.119 Station identification.
<snip>
(f) When the control operator who is exercising the rights and privileges authorized by ï¿½97.9(b) of this Part, an indicator must be included after the call sign as follows:
(1) For a control operator who has requested a license modification from Novice to Technician Class: KT;
(2) For a control operator who has requested a license modification from Novice, Technician or Technician Plus Class to General Class: AG;
(3) For a control operator who has requested a license modification from Novice, Technician, Technician Plus, General, or Advanced Class operator to Amateur Extra Class: AE.

SUBPART C-SPECIAL OPERATIONS
ï¿½97.201 Auxiliary station.
(a) Any amateur station licensed to a holder of a Technician, Technician Plus, General, Advanced or Amateur Extra Class operator license may be an auxiliary station. A holder of a Technician, Technician Plus, General, Advanced or Amateur Extra Class operator license may be the control

operator of an auxiliary station, subject to the privileges of the class of operator license held.

ï¿½97.203 Beacon station.
(a) Any amateur station licensed to a holder of a Technician, Technician Plus, General, Advanced or Amateur Extra Class operator license may be a beacon. A holder of a Technician, Technician Plus, General, Advanced or Amateur Extra Class operator license may be the control operator of a beacon, subject to the privileges of the class of operator license held.

SUBPART D-TECHNICAL STANDARDS
ï¿½97.301 Authorized frequency bands.
The following transmitting frequency bands are available to an amateur station located within 50 km of the Earth's surface, within the specified ITU Region, and outside any area where the amateur service is regulated by any authority other than the FCC.
(a) For a station having a control operator who has been granted a Technician, Technician Plus, General, Advanced, or Amateur Extra Class operator license or who holds a CEPT radio-amateur license or IARP of any class:
<snip>

ï¿½97.505 Element credit.
(a) The administering VEs must give credit as specified below to an examinee holding any of the following license grants or license documents:
(1) An unexpired (or expired but within the grace period for renewal) FCC-granted Advanced Class operator license grant: Elements 1, 2, and 3.
(2) An unexpired (or expired but within the grace period for renewal) FCC-granted General Class operator license grant: Elements 1, 2, and 3.
(3) An unexpired (or expired but within the grace period for renewal) FCC-granted Technician Plus Class operator (including a Technician Class operator license granted before February 14, 1991) license grant: Elements 1 and 2.

ï¿½97.507 Preparing an examination.
(a) Each telegraphy message and each written question set administered to an examinee must be prepared by a VE holding an Amateur Extra Class operator license. A telegraphy message or written question set may also be prepared for the following elements by a VE holding an operator license of the class indicated:
(1) Element 3: Advanced Class operator.
(2) Elements 1 and 2: Advanced, General, or Technician (including Technician Plus) Class operators.
<snip>

Go back to 11 meters, troll...and don't come back until you know what you're talking about.

<kilowattradio_spam@earthlink.net> wrote:

> Dwight, There is no way for anyone to know if a tech license has passed a
>morse code test and all techs have voice privileges for 28.3-28.5 MHz.

First of all, all Techs do not have the voice privileges you
mentioned. Only Techs with Element 1 credit have those privileges.

As for your assertion that there is no way for anyone to know the
difference - Sure there is. Those who passed the test have:

1. A license (even if it's expired) in his/her name showing a class
that had the code test as a requirement, OR

2. A Certificate of Successful Completion of Examination (CSCE) for
Element 1, OR

3. Both.

Consider this: hams do not live, or operate, in a vaccuum. Other
people who live near you know who you are. Chances are that they also
know whether you're a no-code Tech or one who has passed a code test.
If not, they can always ask you, and ask to see proof of having
Element 1 credit.

Now, there may be no legal requirement for you to show it to them, BUT
you see, anyone with code credit will be proud of that fact and
happily show proof of having it...so if you refuse, all anyone has to
do is advise FCC that you were heard on HF and refused to provide
proof of having qualified for HF privileges when asked to do so. At
that point, FCC sends you a letter asking to see proof of your having
passed a code test. Refuse to prove to FCC that you have operating
authority to operate where you were operating, and you leave yourself
wide open to FCC enforcement action up to including the revocation of
your license, a hefty fine, confiscation of your equipment...get the
idea? Ham radio is not like CB where nobody cares whether you follow
the rules or not. The amateur radio service is self-policing. When
other hams hear you operating beyond the authority granted to you by
your license, they WILL blow you in to FCC, period.

> What is the FCC going to do run around and check every tech license holder?

No running around necessary. You get a letter in the mail. You either
respond to the letter or face the consequences.

>Besides would you rather give up ten meters to truckers and CBers?

The 10m band is in no danger of being reallocated to CB. Beyond that, there is no difference as far as I'm concerned between unlicensed pirates operating on a ham band and hams operating beyond the authority of their licenses. Both are operating where they have no authority to operate. Full stop, end of story.

> That is what I'm talking about. There is no longer a international requirement
>for morse code so tech's can pick up the microphone and talk on 10 meters.

Sure they can. So can someone with no license at all. And as FCC will
view the matter, the only difference is that a Tech is a licensed ham
who is supposed to know better, and thus will have no excuse.

> Here in America the FCC has to issue a warning notice, then a violation notice
>and the person cited can then simply demand a hearing before a administrative
>law judge. The ALJ is a pretty informal process and you just need to cite the
>rules and they are not very strict when it comes to matters like these.

Think so? Tell you what I think, I think you forgot to check your
facts again before opening your mouth to change which foot was in
there. The following is quoted from http://www.fcc.gov/oalj/ :

"The Office of Administrative Law Judges (OALJ) of the Federal
Communications Commission is responsible for conducting the hearings
ordered by the Commission. The hearing function includes acting on
interlocutory requests filed in the proceedings such as petitions to
intervene, petitions to enlarge issues, and contested discovery
requests. An Administrative Law Judge, appointed under the APA,
presides at the hearing during which documents and sworn testimony are
received in evidence, and witnesses are cross-examined. At the
conclusion of the evidentiary phase of a proceeding, the Presiding
Administrative Law Judge writes and issues an Initial Decision which
may be appealed to the Commission."

You call that an informal process?

Be advised that there are people currently behind bars because they
tangled with the FCC. The way you're going, you're going to be one of
them before the code test goes away. I suggest that you either find
out what you're talking about first, or stick to other newsgroups
where the participants don't know any better.

> If you have a tech license and you operate outside your allowed bands like pop
>up in the twenty meter band and keep it up they might come after you.

Make that "they will definitely come after you."

>But if
>you meet the international requirements and stay in the HF TECH bands it is not
>a violation of the rules

As has been repeatedly pointed out to you, it *is* a violation of the
rules, unless you have Element 1 credit. Have you ever bothered to
read the rules?

and no one can verify if you have passed a horse and
>buggy CW test any god damn way.

As has been repeatedly pointed out to you, this assertion is also
incorrect. Now go back to 11 meters where you belong, troll.

The *new* 25.5 has already been posted to this newsgroup for you. Did you even bother to read it? It leaves the determination of qualifications to hold licenses for amateur radio up to individual administrations - meaning that each country formulates its own set of requirements to be met by prospective licensees before that country's government will issue them a license.

Current licensing requirements in the United States call for a 5 WPM code test before the government will issue a license that grants HF privileges. Until those rules IN THE US are changed, they are not only valid under the *new* 25.5 but they are also binding on commission licensees. But don't listen to us - go ahead and operate on HF without the appropriate license so we can laugh until we wet our pants when we read in QST, Monitoring Times, Popular Communications, WorldRadio, and CQ about the fine FCC slaps on you for operating your station on an unauthorized frequency - if you even have a ham license of any kind, which I doubt.

>morse code requirements the CW requirement is required.

Absolute nonsense. You don't know *anything* about the regulations
that govern the amateur radio service in the U.S., do you?

Here, in its entirity, is the portion of Part 97 that specifies
qualifications for an FCC-issued ham radio license:

SUBPART F-QUALIFYING EXAMINATION SYSTEMS
ï¿½97.501 Qualifying for an amateur operator license.
Each applicant must pass an examination for a new amateur
operator license grant and for each change in operator
class. Each applicant for the class of operator license
grant specified below must pass, or otherwise receive
examination credit for, the following examination elements:
(a) Amateur Extra Class operator: Elements 1, 2, 3, and 4;
(b) General Class operator: Elements 1, 2, and 3;
(c) Technician Class operator: Element 2.

Here, in its entirity, is the portion of Part 97 that sets the
standards for the various elements mentioned in the above subpart:

ï¿½97.503 Element standards.
(a) A telegraphy examination must be sufficient to prove
that the examinee has the ability to send correctly by hand
and to receive correctly by ear texts in the international
Morse code at not less than the prescribed speed, using all
the letters of the alphabet, numerals 0-9, period, comma,
question mark, slant mark and prosigns AR, BT and SK.
Element 1: 5 words per minute.
(b) A written examination must be such as to prove that the
examinee possesses the operational and technical
qualifications required to perform properly the duties of an
amateur service licensee. Each written examination must be
comprised of a question set as follows:
(1) Element 2: 35 questions concerning the privileges of a

Technician Class operator license. The minimum passing score is 26 questions answered correctly.
(2) Element 3: 35 questions concerning the privileges of a General Class operator license. The minimum passing score is 26 questions answered correctly.
(3) Element 4: 50 questions concerning the privileges of an Amateur Extra Class operator license. The minimum passing score is 37 questions answered correctly.
ï¿½97.505 Element credit.
(a) The administering VEs must give credit as specified below to an examinee holding any of the following license grants or license documents:
(1) An unexpired (or expired but within the grace period for renewal) FCC-granted Advanced Class operator license grant: Elements 1, 2, and 3.
(2) An unexpired (or expired but within the grace period for renewal) FCC-granted General Class operator license grant: Elements 1, 2, and 3.
(3) An unexpired (or expired but within the grace period for renewal) FCC-granted Technician Plus Class operator (including a Technician Class operator license granted before February 14, 1991) license grant: Elements 1 and 2.
(4) An unexpired (or expired but within the grace period for renewal) FCC-granted Technician Class operator license grant: Element 2.
(5) An unexpired (or expired) FCC-granted Novice Class operator license grant: Element 1.
(6) A CSCE: Each element the CSCE indicates the examinee passed within the previous 365 days.
(7) An unexpired (or expired less than 5 years) FCC-issued commercial radiotelegraph operator license or permit: Element 1.
(8) An expired FCC-issued Technician Class operator license document granted before March 21, 1987: Element 3.
(9) An expired or unexpired FCC-issued Technician Class operator license document granted before February 14, 1991: Element 1.
(b) No examination credit, except as herein provided, shall be allowed on the basis of holding or having held any other license grant or document.
ï¿½97.507 Preparing an examination.
(a) Each telegraphy message and each written question set administered to an examinee must be prepared by a VE holding an Amateur Extra Class operator license. A telegraphy message or written question set may also be prepared for the following elements by a VE holding an operator license of the class indicated:
(1) Element 3: Advanced Class operator.
(2) Elements 1 and 2: Advanced, General, or Technician (including Technician Plus) Class operators.

(b) Each question set administered to an examinee must utilize questions taken from the applicable question pool.
(c) Each telegraphy message and each written question set administered to an examinee for an amateur operator license must be prepared, or obtained from a supplier, by the administering VEs according to instructions from the coordinating VEC.
(d) A telegraphy examination must consist of a message sent in the international Morse code at no less than the prescribed speed for a minimum of 5 minutes. The message must contain each required telegraphy character at least once. No message known to the examinee may be administered in a telegraphy examination. Each 5 letters of the alphabet must be counted as 1 word. Each numeral, punctuation mark and prosign must be counted as 2 letters of the alphabet.
ï¿½97.509 Administering VE requirements.
(a) Each examination for an amateur operator license must be administered by a team of at least 3 VEs at an examination session coordinated by a VEC. Before the session, the administering VEs or the VE session manager must ensure that a public announcement is made giving the location and time of the session. The number of examinees at the session may be limited.
(b) Each administering VE must:
(1) Be accredited by the coordinating VEC;
(2) Be at least 18 years of age;
(3) Be a person who holds an amateur operator license of the class specified below:
(i) Amateur Extra, Advanced or General Class in order to administer a Technician Class operator license examination;
(ii) Amateur Extra or Advanced Class in order to administer a General Class operator license examination;
(iii) Amateur Extra Class in order to administer an Amateur Extra Class operator license examination.
(4) Not be a person whose grant of an amateur station license or amateur operator license has ever been revoked or suspended.
(c) Each administering VE must be present and observing the examinee throughout the entire examination. The administering VEs are responsible for the proper conduct and necessary supervision of each examination. The administering VEs must immediately terminate the examination upon failure of the examinee to comply with their instructions.
(d) No VE may administer an examination to his or her spouse, children, grandchildren, stepchildren, parents, grandparents, stepparents, brothers, sisters, stepbrothers, stepsisters, aunts, uncles, nieces, nephews, and in-laws.
(e) No VE may administer or certify any examination by fraudulent means or for monetary or other consideration including reimbursement in any amount in excess of that

permitted. Violation of this provision may result in the
revocation of the grant of the VE's amateur station license
and the suspension of the grant of the VE's amateur operator
license.
(f) No examination that has been compromised shall be
administered to any examinee. Neither the same telegraphy
message nor the same question set may be re-administered to
the same examinee.
(g) Passing a telegraphy receiving examination is adequate
proof of an examinee's ability to both send and receive
telegraphy. The administering VEs, however, may also include
a sending segment in a telegraphy examination.
(h) Upon completion of each examination element, the
administering VEs must immediately grade the examinee's
answers. The administering VEs are responsible for
determining the correctness of the examinee's answers.
(i) When the examinee is credited for all examination
elements required for the operator license sought, 3 VEs
must certify that the examinee is qualified for the license
grant and that the VEs have complied with these
administering VE requirements. The certifying VEs are
jointly and individually accountable for the proper
administration of each examination element reported. The
certifying VEs may delegate to other qualified VEs their
authority, but not their accountability, to administer
individual elements of an examination.
(j) When the examinee does not score a passing grade on an
examination element, the administering VEs must return the
application document to the examinee and inform the examinee
of the grade.
(k) The administering VEs must accommodate an examinee whose
physical disabilities require a special examination
procedure. The administering VEs may require a physician's
certification indicating the nature of the disability before
determining which, if any, special procedures must be used.
(l) The administering VEs must issue a CSCE to an examinee
who scores a passing grade on an examination element.
(m) Within 10 days of the administration of a successful
examination for an amateur operator license, the
administering VEs must submit the application document to
the coordinating VEC.

Nowhere in there does it say anything about the international
requirements.

> Well the international
>regulations do not require a morse code proficiency for HF access.
>97.301(e)

97.301(e) For a station having a control operator who has been
granted an operator license of Novice Class or Technician

Class and who has received credit for proficiency in
telegraphy in accordance with the international
requirements.
<snip> (Snipped material lists authorized frequencies for operators
with these license classes)

Once again, current international requirements leave it up to each
country's government to determine the requirements for that country's
ham licenses. Which brings us back to:

ï¿½97.503 Element standards.
(a) A telegraphy examination must be sufficient to prove
that the examinee has the ability to send correctly by hand
and to receive correctly by ear texts in the international
Morse code at not less than the prescribed speed, using all
the letters of the alphabet, numerals 0-9, period, comma,
question mark, slant mark and prosigns AR, BT and SK.
Element 1: 5 words per minute.

> I guess it all boils down to what "IS IS".

Yes, it does. And the above "is" what the current regulations "is"
whether you like it or not. Deal with it - or be prepared to explain
your illegal operation to Riley Hollingsworth.

>BTW, what do you care about US regs if you live in Canada?

The HF bands propagate worldwide - which means if clueless trolls like
you get on HF, he would have to listen to your pitiful attempts to act
like someone who knows what they're talking about.

I've been in favor of dropping the code test since the mid-1970's. You
are beginning to make me change my mind.

You are apparently unable to read and understand the applicable regulations, at both the US and international level, even though I and others in this NG have gone out of our way to post the material in this newsgroup (thus saving you the trouble of finding it yourself on the Internet) AND explaining it to you (thus saving you the trouble of turning off your CB set long enough to figure it out).

>I am talking about a technician class licensee having tech class HF
>privileges without the code test.

For the hundredth time: they don't.

> I'm not talking about making them to general.

Perhaps the confusion is because you insist on referring to picking up your microphone and talking on the HF Tech bands (plural) when there is only on HF Tech band (singular) in which Techs are allowed to operate phone (that being a part of ten meters). You don't get to bands (plural) until you have a General or above.

> Don't worry this is going to be reviewed legally very soon.

To paraphrase your own comment in another post: SNARF! HA, HA!

It will be reviewed *administratively* - there is a big difference. Congress empowered FCC to formulate and enforce regulations governing the use of the radio frequency spectrum. The courts have repeatedly ruled that FCC's authority is constitutional. The decision of whether or not to drop the code test will be purely an administrative decision on the part of the Federal Communications Commission.

The "international requirements" have to ratified, and FCC rules changed, before any content of those "international requirements" become the law of this land. Until that happens, your license is dependant on existing FCC rules and regulations. The courts will enforce those existing regulations, not some possible future change in them.

Further, the changes in the "international requirements" do not eliminate code testing - it simply leaves it up to individual governments to keep or end testing. If the US decides not to end testing, there will be no change in our laws for the courts to even consider in your defense.

True, the FCC no longer issues that license. However, those with an existing Tech Plus license before the change still retain that license and operating privileges. Today, Technician license holders who have also passed the code test get the same HF operating privileges as those earlier Tech Plus license holders.

> Hey Dwight have you ever driven 56 in 55 mph zone?

Yes, I have driven faster than the speed limit when I felt, rightly or wrongly, I could do so safely. The decision to do so was based on my personal assessment the possible impact of my actions. But this goes back to what I said earlier. Again, I do not just base my decision to abide by the rules and regulations governing Amateur Radio solely on FCC enforcement abilities. Instead, I base that decision on my own sense of what is good for the Amateur Radio community - the impact of my actions. I personally benefit from a community with a commitment to abide by the rules and regulations. Therefore, it is in my own best interests not to do anything to upset that situation. As a result, I also abide by the the rules and regulations.

That's the point -those existing regulations incorporate by reference an
international requirement that no longer exists

To be fair though, I am playing devil's advocate to some extent. I don't
want to get Techs in trouble. What I'm saying is that there is now at
least an arguable interpretation of the _existing_ regulations that would
allow no-code Techs on the Novice bands now.

The key words in FCC s.97.301(e) are "Technician Class and who has received credit for proficiency in telegraphy in accordance with the international requirements". The current wording of ITU s25.5 (supra) does not _require_ anyone to pass a code test unless the administration says so, ergo it is _not_ a _requirement_ , international or otherwise.

The FCC rule does not stop after "has received credit for proficiency in telegraphy". If it did it would be unambiguous. If we give any weight to the next part of the sentence "in accordance with the international requirements", we are forced to take into account the fact that the international regulations do not require "proficiency in telegraphy' any longer, as of July 5th inst. If this means anything, it ought to mean that since there is no longer an international requirement for proficiency in telegraphy, then the rule should be interpreted to apply simply to "Technician Class" operators without further qualification.

OTOH, relying on this argument is risky!

That's not what he is saying. US Rule 97.301(e) uses the words
'international requirements', i.e. it incorporates the ITU rules by
reference. If he goes on 10m he may well end up before a judge, but he may
win (or not, it's risky).

A better idea than just operating. They might even agree, although I
wouldn't bank on it.

OK Phil, read 97.301(e) and let us know how you understand it, parsing
each part carefully.

You obviously don't understand the FCC rules any better than Keith.
Until the FCC eliminates the code test requirement, everything remains
the same for U.S. hams.

Not quite. The rule is the same, but the 'international requirements' it refers to have changed. How you interpret that is another thing, but the FCC chose to write a rule that incorporates by reference the rules that were changed in the WRC.

Here's an idea for an analogy. Anyone here ever write any code of the computer kind? Say you write something that makes a call to another object/subroutine, etc. The ITU have re-written the subroutine, and the FCC code includes a GOSUB that calls it (revealing my BASIC roots here).

*** i can attest to the above, with my home built 3,500 volt at 1.2 amp
supply, only caps in it are the ones in the stepup section, and a really big
dog oil filled on the output (just for grins), there are no other caps
needed with the modern equipment, all i used were two modern 2 amp at 3000
volt rectifier "bricks" and these 3-500's really like this, catch me on
50.125***
==========

How many references do you need? All you need is a working understanding of the
concepts, something you have consistently failed to demonstrate.

>:>I trust the statements made by the original authors, well over

The world doesn't revolve around the internet, Skippy. And unless your
publications have a stamp of approval from some authoritative organization, such
as the engineering department of a major university, or a long-time manufacturer
of equipment related to the topic, then that 'publication' carries about as much
weight as some guy claiming that butterflies are all possessed by the souls of
dead alien housepets from Betelguese.

Pulling quotes out of context again, Skippy? That's Twisty's forte. Ok, since you want to play it that way, I'll play it this way and put your quote back into context:

"For static conditions the important parameter is the reverse characteristic. A certain supply voltage results in a certain reverse current at which the sum of the reverse voltages of all the rectifiers is equal to the applied supply voltage. If the safety factor for the reverse breakdownï¿½voltage for each rectifier is low (e.g. 10%), it can happen that the best rectifier (best reverse characteristics, high breakdownï¿½voltage and low leakage current) will be in the avalanche mode all the time.

For dynamic conditions the important parameter is the switching characteristic. Switching from forward to reverse conditions will result in a short avalanche pulse in the fastest rectifier, because this rectifier is already in the reverse mode with reverse voltage and the other not, i.e. there is still some charge stored in the slower one.

Rectifiers can be connected in series without external components for symmetrical conditions if these rectifiers are able to withstand the avalanche energy and the resulting junction temperature is below the maximum guaranteed temperature ."

YOU lose, Skippy.

>For those just joining in on the fun... I along with others claim that the
>resistor-capacitor parts placed in parallel with diodes in a typical HV
>amplifier supply are for the most part; suggested from dated technical
>material and not required when using modern generation rectifiers.

And for those same people, Skippy claims to be some kind of super amp-tech, but every time he dives into a technical discussion he comes up with some of the most outrageous theories I have ever heard. While this rectifier business is a small issue, it is nonetheless characteristic of his incompetence, and as it progresses he continues to demonstrate that he is willing to defend that incompetence by any means possible.

For example, in five minutes on a search engine I found five strong references that contradict his opinion on the rectifier issue, two of them being semiconductor manufacturers. Notice how Skippy attempted to quote the words of one source out of context and ignored the other four, and has provided no authoritative references to the contrary (about this issue or any other!). Also pay attention to what he snips from my posts in his replies. Much of that content includes facts that Skippy chooses to ignore, such as those other four references.

So unless anyone really wants to read all this bickering, I recommend the killfile for both of us.

>: Your buddy Measures read the ARRL notes regarding manufacturing

>news and potential sources of trouble.

Yet you still haven't explained why they are a source of trouble. Or is that part of your "bigger picture"?

All resistors radiate heat. That's what they do, and if they didn't they wouldn't work. The issue that escapes you is how much heat is radiated. If the resistors get too hot then either you are using the wrong resistance or the wrong power rating.

And if you and "others" feel that equalization isn't required, why do at least two major semiconductor manufacturers disagree with you (and "others")?

>: But if you think that not using voltage equalization makes you look
>: like a hot-shot, then go for it -- you aren't gambling with MY money!
>
>You are not building amplifiers for the most part... only generating

>Go look it up...

In the grounded-grid configuration it is very stable. I have never had an argument with that issue. What you can't seem to grasp (despite the fact that I have mentioned it about a hundred times) is that there are different causes of parasitic oscillations, only one of which is due to internal tube reactances. The 8877 is a well-designed tube, and those reactances are minimized, but its design doesn't prevent parasitics that are caused from other issues, such as input-output circuit coupling. Why is this such a difficult concept for you to understand, let alone just acknowledge?

What a crock. Look at the above paragraph, the one where I say, "...if you can't logically dispute what I wrote above then no other source is needed." Well, you responded with "ZZZZZZZZZZZ....." So I guess you CAN'T logically dispute what I wrote, and it is YOU that is dragging this issue off-topic. Quit whining and address the issue, Skippy.

In the case of two locals, one on channel 3 and one on channel
3a, I'd say the one operating *illegally* on 3a will definitely create
adjacent channel interference to the one operating legally. And did
you ever stop to consider that 3a (and the other "a" channels") are
allocated for non-voice use for a *reason*? A great number of RC toys
and model enthusiasts use those frequencies, and they have a right to
use them, while keyclowns don't.

> So, they will cause no more "splatter" than using any legal adjacent

Poor Brainbuster and Twisty. You can't say that voice operation
on those channels is not illegal so all you can do is try to refocus
on semantic word games.

> Brainbuster.

Brain Busted is more like it.....back to Birmingham with you.

From: Keith Hosman <logdshr@bnnorth.net>
Message-ID: <dqtUa.7207$Ly2.1158302@cletus.bright.net>
Source record: 163023

Fresh from her shower, a woman stands in front of the mirror, complaining to her husband that her breasts are too small.

Instead of characteristically telling her it's not so, her husband uncharacteristically comes up with a suggestion.

"If you want your breasts to grow, then every day take a piece of toilet paper and rub it between your breasts for a few seconds."

Willing to try anything, the wife fetches a piece of toilet paper and stands in front of the mirror, rubbing it between her breasts.

"How long will this take?" she asks.

"They will grow larger over a period of years," he replies.

The wife stops. "Do you really think rubbing a piece of toilet paper between my breasts every day will make my breasts larger over the years?"

Without missing a beat the husband says, "Worked for your butt, didn't it?"

He still lives, and with a great deal of therapy, he may even walk again.

Stupid, stupid man.

Source record: 163024

A woman awakes during the night to find that her husband was not in bed. She puts on her robe and goes downstairs to look for him. She finds him sitting at the kitchen table with a cup of coffee in front of him. He appears to be in deep thought, just staring at the wall. She watches as he wiped a tear from his eye and takes a sip of his coffee. "What's the matter, dear?", she whisper's as she steps into the room, "Why are you down here at this time of night?".
The husband looks up from his coffee,"Do you
remember 20 years ago when we were dating, and you were only 16?" he asks solemnly. "Yes I do" she replies. The husband paused, the words were notcoming easily. "Do you remember when your father caught us in the back seat of my car making love?" "Yes, I remember" said the wife, lowering herself into a chair beside him.

The husband continued.............
"Do you remember when he shoved the shotgun in my face and said, "Either you marry my daughter, or I'll send you to jail for 20 years?" "I remember that too" she replied softly. He wiped another tear from his cheek and said, "I would have gotten out today".

Keith made a legitimate request to take action to eliminate the code
testing. He provided the websites to do just that. If you happen to
disagree with him on that issue, it doesn't make it a troll post.
Keith wrote:

--

Well, I certainly can't take issue with his approach. Massive Civil
Disobedience on a wide scale can be extremely effective. Has anyone else
thought about what this "protest" may actally lead to? Suppose a
plethora of ops show up, unlicensed and unauthorized, both, to partake

in the protest. Then they can do it again the next week, Then the week after, and the week after,,,pretty soon, we can all be rolling onto ten meter as a place for more quality HF spectrum with no reservations and no licenses....with minimal enforcement...the way it ought be. Done told them nocodes over and over,,, watch they ask for,,,,,,,they just might get it. Some need to reach for that instant gratification, though, and it appears no matter how much noise they make, it ain't gonna happen. The code has it's purpose in life, and contrary to many nocodes belief, such is not to keep them down, but to add to and enhance their radio knowledge and capabilities.

Code also has a purpose, in that it will get through some band conditions that phone will not. Besides, it can be fun.

Your license will say Technician but you will retain your Tecnician Plus privileges forever (or until you upgrade to General) assuming that you keep your license current. Since the FCC database will no longer show the difference, keep a copy of your old Technician Plus license and/or your Technician Plus CSCE to be able to prove that you have those priviliges.

Hey Keith, do actually know the FCC rules? They did stop issuing the novice and tech plus licenses, but the requiremenmts are still there. Now if a tech passes element one thet are still a tech but witt the same HF priviledges as a novice. They have to keep there CSCE as proof. The treaty stated that it no longer requires code, but would leave it up to the individual countries to set the rules, and UNTIL the fcc says CW is no longer needed, then the same rules apply as before the WRC treaty change.

I imagine he could find all his information in the Amateur Radio
Handbook. And YOU could, too, if you bothered to look, Mr "commercial
broadcast engineer". But that's too much like work, unlike trolling!

You really gotta stop adding so much coffee to your morning whiskey.
It makes bitter.

Through freedom of choice, CW is my favorite mode. I would have used
my free will to learn and use CW even if there had never been a
requirement to do so.

Risky, yes, but only because one would not wish to be the acid test for whether the argument would work or not in a court of law. But the argument you present above is very interesting and I'd find it very interesting to see presented and debated in a court of law...

Apologies to Steve, Mark, Michelle, and the gang at rec.crafts.metalworking and rec.woodworking---you folks are definitely *NOT* trolls.

With that out of the way, let the word go forth that Guy Richards has found other NGs besides this troll-infested morass named Google. If you guys from metalworking & woodworking are smart, you'll jump ship too.

Twisty, behave yourself during your stay in the Crossbar Hotel... and no more jamming the airwaves when they parole you!

Aaron, cheer up... maybe one of these days, Uncle Sam will give you a real badge and make you a real G-man! But you absolutely must stop sending out those bogus communications-violation notices if you want that badge... Uncle Sam gets a wee bit upset when you do that.

Hagrinas... dude, you should stop holding back and write that book of yours. Don't be stingy, share some of that knowledge with the rest of us! You might even have a shot at a Nobel!

Laura... ah, you never learn. That's because you CAN'T learn! Now of course, you're going to put up a whole shitload of replies to all those hacker NGs you belong to, but the joke's on you, sister... because **I'll never read 'em**, hahahahaha!!! You want attention, but I'm not going to give it to you (and neither does anyone else, judging from all the no-reply messages you posted on that virus NG). Damn shame, you could get a job someday if you'd ditch your shitty attitude... but hey, it's not my fault your kitty died.

Last (and certainly least), to Ed... you could have really hit it big with that car-restoration biz of yours. But alas, you thought the booze tasted so good... one tequila, two tequila, three tequila, floor. *hic*

Now watch, you dumbass trolls are going to reply to this post, because you think I'm going to come back and read it. Post reply, slave. Hit send button, slave. I won, slave. Go ahead, waste all the bandwidth you want... it is all in vain. ALL IN VAIN, trolls.

If you have something to tell me that's so damn important, you can e-mail me directly with your usual unoriginal drivel. I just toss all that crap straight into the delete file anyway. Shot wasted... you lose.

Now, GOOD RIDDANCE, trolls!!! Hahahahahaaaaa!!!!!

Not a thing....but do you consider the campaign run by No Code International
a exercise in free speech, or a attack on the Morse testing requirement? I
consider it an attack. Which has NOTHING AT ALL to do with Free Speech.

I'm a Libertarian. Libertarians believe in the least amount of governmental
intrusion and control as is necessary. For instance, Libertarians are against
seat belt laws, motorcycle helmet laws, and I assume also against unnecessary
governmental requirements like a driver's test using a stick shift and Morse
code. I suspect that the new hams who learn Morse code because they want to
will be better members of the ham community than the ones who learned Morse
code because they had to even though they hated the idea of being forced to.
I suspect they will certainly not bitch about Morse code testing 24/7.

Yes.

or a attack on the Morse testing requirement?

Yes.

In the back of your mind, you realize that the usefulness of CW is low
enough that the majority of people will never bother to learn it if not
forced to do so. CW, as a requirement, will be dropped. We will then see
what value peopls put on it.

Personally I *encourage* all those who think that they now have HF
privileges to hop on and start using what they think they have..

Let enough people know, and we (or you yourselves, since you're so sure)
can make recordings of your activity, then ship 'em off to Riley and get
his interpretation of the matter!

Have the courage of your convictions folks?

I've dealt with these types before. Take one part of a rule, and then proceed to interpret the bejabbers out of it.

There is no rule that can be written that cannot be interpreted just about any way a person wants to.

In other portions of the rules, there is adequate understanding that for HF privileges, you must take a test, one of the elements consisting of a Morse Code test.

In addition, we must note that the Morse code test has NOT been eliminated. It is now up to the individual country to determine if they want the test as a requirement.

So, the US is still in compliance with the rule, in requiring a Morse code test. If we eliminate the MOrse code test, we will still be in compliance, having exercised that option as outlined in the rule.

If you don't believe me, just give it a try, and provide documentation of your times and date. A recording would be nice too.

Do you folks have the courage of your convictions?

> What's so difficult to understand? (Other than English, that is.)

What are you babbling about dickieboy? Maybe his misconceptions are clear to idiots like you (why does that suprised anyone?), but the fact remains, until the FCC goes through the procedures necessary to eliminate the code requirement for the amateur radio service, it is still required and everything is just as it has been. Just because the WAC no longer requires the code, does not automatically drop it from the FCC requirements. Try reading more carefully and you might learn something, like how to find the 10 meter band.
Lets see a newbie go for the General license and see if he can get one without taking a code test. You are as dense as this keith bird. You both must be really good on cb.

Seems to me, the other Keith is too lazy to read the rules and regulations
and instead wants a hand out. He needs to REALLY sit down and read the rules
and regulations or have them read to him and get a grasp on the fact that
you can't just do as you damned well please. That laws and rules are made to
abide by.

Unless you're a proven mind reader Jerry I fail to
see how you can make such a wild statement and
pass it off as the truth.

> Trouble is, they are not smart enough to realize
that the
> result would be worse than the cure:

All of the bickering and in-fighting over the
issue is worse than anything that will come as the
result of the dropping of the CW requirement.

> when they finally finished ruining
> radio and making it unusable, they would wish
that there had been some kind
> of order after they can't talk across town for
the keyclowns.

The same crapola was repeated time and again about
the restructuring of the ARS, and guess what?
Things turned out just fine. I don't see anything
going down the drain with the removal of the CW
testing requirement other than another issue that
is no longer necessary to fight over.

> It isn't a
> matter of whether there is a code requirement or
not, it is a matter of
> what they ultimately want:

It's a simple change in techinical requirements.
Nobody tests to see if you can properly saddle and
ride a horse just to get a driver's license.
Change happens and some people just can't seem to
get with the program.

> Next organization to pop up will be NTI--No Test
International. Just go to
> Wal-
> mart or Bubba's CB shop and VOILA--"Ah'm one of

them 'ere 'good' operators,
> thar, tan fer thar?"

Well Jerry I do have an issue with the written exams. I am one of those in favor of NOT publishing the question pool along with the correct answers. When you have 9 year old kids passing the written Extra exam because they simply memorized the correct answers it is of far more concern that if one can bang away at a key trying to send CW. I'll bet those 9 year old Extras can't even identify which end of a flashlight battery is the positive and negative terminals because they really don't undersand the material. I brought this whole issue up in the policy news group a few years ago after QST ran an article about how some Ham "computer trained", i.e. used computer generated test exams, on his 9 year kid to the point where she could pass the written exams from memory.

I think it's a real shame that so many Hams waste their time arguing about CW testing when the larger picture is that far to many hams don't have a clue about how their rice-box-radios even work internally. So you have the situation where Hams believe it necessary to be CW proficient, but OK to be technical ignorant because they simply memorized their way through passing the exams.

Does this give ANY of you No Coder types something to think about??? Please read it over and maybe, just perhaps something will sink in. This is the way it is....end of discussion.

From the ARRL letter, Vol 22. No 29

Dan/W4NTI

==>WHAT TO DO ABOUT THE MORSE REQUIREMENT POST-WRC-03?

World Radiocommunication Conference 2003 (WRC-03) made optional the requirement to prove the ability to send and receive Morse code to operate below 30 MHz. While Morse exam elements remain on the books in the US, Canada and elsewhere, Switzerland and the United Kingdom have apparently become the first countries to delete their Morse requirements for HF operation. In the US, however, the FCC is unlikely to act on its own motion to simply make the Morse testing requirement go away.

"There isn't an exception in the Administrative Procedures Act that I am aware of that would permit the Commission to issue an administrative fiat changing the license structure or exam-requirement rules," said an FCC staffer who's closely involved with Amateur Service rules. Other countries can do this because they have different laws and procedures, the FCC staff member observed, adding that even if it could be done here, "that still leaves unanswered the fundamental question: What do you want the new rules to be?"

In its December 1999 Report and Order restructuring Amateur Radio licensing, the FCC stopped short of revising the rules to sunset the Morse requirement automatically if WRC-03 deleted Morse proficiency from the international Radio Regulations. The FCC also acknowledged "a clear dichotomy of viewpoints" on the Morse code issue within the amateur community.

The ARRL's policy for several years has been that Morse should be retained as a testing element in the US. At its July 18-19 meeting in Connecticut, however, the Board said it would solicit and review input from members on the Morse testing requirement and other possible revisions to Part 97 arising from WRC-03.

The first move on the Morse code question in the US is for someone to file a Petition for Rule Making with the FCC seeking a rule change. No Code International (NCI) <http://www.nocode.org/> has spearheaded the battle to eliminate the Morse requirement and would be a likely organization to file such a petition. NCI Executive Director Carl Stevenson, WK3C, said late last week that NCI was still studying the matter and had not yet made a

final decision on a plan of action. An ARRL member, Stevenson says he hopes personally that the League would join NCI in actively encouraging the FCC to eliminate the Morse exam element as soon as possible.

Hopes for a quick resolution to the Morse question could be wishful thinking, however. Once a petition to drop the Morse exam element is filed, the FCC will put it on "public notice" by assigning an RM number and soliciting comments. If more than one such petition is filed, the FCC is obliged to invite comments on each. When that process is completed, the FCC may determine that a Notice of Proposed Rule Making (NPRM) is in order. The Commission at that point could incorporate all Morse-related rule making petitions into a single proceeding. The NPRM would get a docket number, and the comment process would begin anew.

Further complicating and extending the process, the FCC most likely would incorporate other pending Amateur Radio-related issues into the same NPRM. At the end of the comment and reply comment periods, the FCC would issue a Report and Order (R&O) that includes its decision on the Morse code requirement and any other issues incorporated into the proceeding. The whole process could take a couple of years, perhaps longer.

Ratification of the WRC-03 Final Acts by the US Senate does not appear to be necessary before the FCC can act or begin the rule making process. Following World Administrative Conference 1979 (WARC-79) which resulted in three new HF amateur bands, the FCC acted in 1982, prior to Senate ratification of the conference's Final Acts, not only to initiate the rule making process but to give amateurs limited access to 30 meters.

Radio Amateurs of Canada has advised hams in that country that the Morse qualification requirement remains in effect for operation below 30 MHz, "pending a review by Industry Canada of the impact of the WRC-2003 regulatory changes on the Canadian radio regulations, policies and procedures."

What are you babbling about, JJ? He made it quite clear (except for
morons):
1. The FCC Rules & Regs make reference to the code requirement as
spelled out by the WRC.
2. The WRC no longer requires any code.
3. Ergo, the FCC Rules & Regs no longer require code.

What's so difficult to understand? (Other than English, that is.)

Why Thanks Dan, why did you cross post this?
What does this have to do with CB Radio?

I believe the ARRL will solicit its members for their opinion on this
subject, for their submission to FCC.

After reading years of the venom from ANTI CW proponents I have decided to
oppose ANY removal of the CW requirement.

At one time I thought the removal of CW testing would be a good thing, I
have rethought that position.

I am tired of all the whinning, bitching, moaning and bullcrap coming from you lazy good for nothing losers that are TOO SORRY to learn a 5 WPM code speed and take a multiple guess test. Now thats plain sorry.

Expect massive comments and opposition from the real hams.

You have every right in the world to contact the FCC and let
them know what you would like to happen as far as code and
license
requirements. They even make it easy for you to do, so by all
means, do it!.
Then comes the part about an 'on the air' protest. Just how
silly (read that as stupid) can you get? If anyone thinks the
FCC doesn't know that people want the code requirement dropped
they are very, very uninformed (read that as stupid too). A
'protest' would accomplish absolutely nothing beneficial, and
would do harm instead. Talk about getting what you wanted and
then
shooting your self in the foot! Just a little bit of thought
would
show you how silly the whole thing is...

Another problem that was pointed out to me are people with disabilities.
According to the American with Disabilities Act the government can not
discriminate against disabled people .
Now that s25.5 is international law the government must now accommodate
disabled people and they must do it without reasonable delay.

Since I was "double quoted" in this, I'm not certain if that last comment was
directed back to me or just for Keith.

However, note that I recognize that there may be an unintended result of the
recent international event - and that is certainly a "new thought" for this
group. It also demonstrates that no body of law should refer to definitions
made in another body of law that one has no control over and expect things to
be the same if the referred-to law is changed when the referring law isn't.

Do I need to petition for declaratory ruling to find if the FCC rules say if I
can operate CW on 80 meters?
And do not say I'm playing a lawyer. I am discussing a issue you on a f*cking
news group.

But note HOW the privilege is defined. In this case, it's NOT defined as simply holding "element 1 credit" like it's pre-2000 predecessor was. Other license classes' privileges are based on license class, which is in turn based on element credit. However, for the HF operation of Technician and Novice licenses, the current regulation doesn't refer to element credit but instead refers to the international requirement - which was just repealed (and replaced with a statement that each country may decide for itself - but that makes it a "national requirement" and choice, not an international one).

If the section privileges were based on "holding element 1 credit," then I would agree that nothing has changed. However, that is clearly erroneous.

> So, the US is still in compliance with the rule, in requiring a Morse
> code test. If we eliminate the MOrse code test, we will still be in
> compliance, having exercised that option as outlined in the rule.

I don't dispute that. However, the authority for HF operations of Technician and Novice licenseholders isn't based on simply holding element credit like it

is for the other license classes.

>
> What's so difficult to understand? (Other than English, that is.)

There's a fourth step here:

4. Since there is no international requirement any more, no one can meet that
[now nonexistent] requirement.

Therefore, under this logical application of the regulation and the events
effective July 5, 2003, there is no operating authority for any Novice or
Technician (Plus or with an element 1 CSCE) for any frequency below 30MHz,
since said authority contains a requirement that cannot be met (because there
is no such requirement anymore, having been repealed).

A 5wpm code test does not discriminate against Americans with disabilities.
Disabled people have passed while their unhandicapped brethren have sat on
the sideline whining about the code.

It maybe a big loop hole Keith UNTIL the FCC
decides they want YOU to provide proof that you
had the proper license to transmit there. It's a
VERY bad idea, and I don't recommend that anyone
try it either. For a better way they could follow
your other suggestion about contacting the FCC. Or
from a copy of an E-mail I got below:

++
Leland,

Thanks for sharing your thoughts on code
requirements with me. This, as
a matter of fact, was the topic of a poll I sent
to all ARRL members in
this Division. The "all;" however, is
unfortunately limited to members
who allowed me to send such information and polls
to them with the
information they provided when they signed up at
the ARRL web site for
the Members Only page. If you haven't done this,
yet, please do. About
every 4-6 weeks I send information to "all"
members on various actions,
thoughts, etc. that are likely to impact them as
radio amateurs.

Having said the above, I will include your input
into the responses I
received from my poll.

Tnx, 73, GL,

Jim

Actual it is discrimination, but that beside the point. The FCC should not
deleted
47 CFR 97.503(a) because of ADA - it should deleted it because it: (1) is
unnecessary,
(2) is bad public policy, (3) it servse no legitimate government purpose,
and (4) is not
in conformity with 5 USC 706(2)(A). At WRC 2003, no nation member spoke
in favor retaining ITU rule S25.5.

Whinning? I think you mean winning. We are sat the winning side of the
debate
to end Morse code exams.

Dee, it not necessary to insult people, just tell Keith that the WRC 2003
delete
the international requirement; and the FCC, in due course will delete
the domestic requirement.

I wish they would test the system so much! There is so much more to
"rules" han just a verbatim translation. There is intent, and spirit.
Since there is always someone who likes to put a spin on the rules, ther
has to be constant interpretation of the same.

An early acquaintance in ham radio could "read" CW in flashing lights. I've
heard stories of others who have felt vibrations to "read" CW.

My ex had 70% hearing loss in both ears and a constant ringing of the ears.
He too passed his 5wpm. Although he did have it so loud when he practiced
that I either had to leave the room or make him wear headphones. Of course
there were other testing methods for those who were totally deaf.

At one point, I was thinking about trying the vibrating method, like
holding my fingers on a speaker cone. But as a challenge, I decided to
go for the aural method. Wasn't easy, but I did it.

Hehheh, I know that one. I use headphones to listen to the television,
and my XYL is driven up the wall by the level I use to listen. Field day
can also be a nuisance, when one person is op, and the other is logging.
Thank heavens there are some headphones with volume controls on them.

In the end, That's a big reason why I love PSK31. I don't have to
disturb anyone else, and can work in a relaxed state of mind.

I have a Mobile Authority Model 810ZX 35 amp 12vdc power supply that is
putting out almost 24volts now...
It has a variable power control and it does not change the output at all.
Unit was working, then when I turned it on, my radio lit up real brite.
I am glad it did not hurt the radio.
Could it be that the 4 transistors in the back went bad? MJ15015
Any help would be great...
Please e-mail me direct at
tramd300@aol.com

Thanks in advance...

Hey Keith may be you can help me. I have been diagnosed as a dyslexic
and have ADD. My disability prevents me from concentrating for more
than a few minutes so I can't take any code test or written test let
alone study for them.There must be some legal loophole or political
angle you can figure because there are millions of general public with
disabilities like me who want open access to the ham bands but the
government discriminates against us.Just because I have a disability
why should I be denied my right to operate ham? Maybe a protest or
something would help.Thanks for your help Keith keep up the good work.

Thanks for a quote of Kim's message, Dee.

Sorry, Kim, I'm still having problems reading your messages (the same problem as before). I don't know if it's my server, your server, some software setting, or something else entirely. I haven't blocked your messages. I checked to make sure of that. They're still showing up in the newsgroup message list. However, whenever I select one to read, I get an error message saying the message is no longer on the server.

Occasionally one will slip through that I can read, but 99 percent of your messages result in the same error. Again, this doesn't happen to messages from anyone else. In fact, your messages are the only times I've seen this error message at all.

If this isn't happening to anyone else here (and nobody else has said anything), I can only assume the problem is with my server. So, it looks like the problem will remain until I switch servers (something I'm planning to do soon anyway). When it stops, I'll let you know.

Of course, if you reply to this, I'll probably never see the reply. So, if you have something to say in reply, send it by email instead.

I'll try it again, Alun. The new treaty with those changes has to be ratified before it becomes the law of this land. Until that time, the only "international requirements" recognized by this country are those in the treaty this country has already ratified (the one prior to the recent changes). That treaty requires CW for HF privileges.

To put this another way (and reply more directly to your comments above), the "international requirements" for code testing does exist in the only treaty this country legally recognizes (the one currently ratified).

Once the new treaty is ratified (the new treaty containing the changes), at that point, and only at that point, will the FCC be able to consider eliminating CW for HF privileges. Remember, however, that the treaty change does not require the FCC to drop code - the change leaves it up to each member state to decide for themselves.

The FCC may find a way to stop code testing before the new treaty is ratified, but it is not at all clear if that is even possible (in other words, don't hold your breath).

And you understand just about as much as dickboy does. Until the FCC
changes it, nothing has changed, code is still required.

Alternate interpret all you want, until the FCC changes the rules,
nothing has changed. The FCC makes the final interpretation and they
have NOT changed the rules regarding a code test.

KEITH.

YOU ARE AN ASS... IN dealing with CW tests for ADA people there are MANY ways an examiner has latitude to issue a code test so that they have a chance to pass it... READ THE RULES AND REGULATIONS SOME TIME. I've given many ADA tests, to both Blind, Deaf and those who couldn't even write even if they did have all other senses. So long as the examiner does NOT give them the answers to the questions or directly/indirectly tell them what was sent so as to cheat, they can do damned near anything to help that person get what is needing to be sent to give them that fighting chance.... Don't open your mouth without facts which you have yet to provide any of in support of your lawlessness aim to sidestep a part you're apparently too damned lazy to do. I've seen more handicapped people pass a code exam than you can count. MORE than the lazy people like you who are "supposedly" NOT handicapped. PRIOR to the code being dropped to 5WPM, there were waivers available by Dr. Signature for the 13/20WPM. But 5WPM is so damned easy, it is pathetic. I STILL SEE LAZY in every one of your posts. I know a paraplegic who is a ham, passed his exam with no problems.. Today that boy even in his condition, is one hell of a smart kid. IT TOOK DETERMINATION AND WORK to get where he got. It takes that by ALL to get anything worth having. That boy is - even in his condition, a computer whiz. He earned his 20 WPM the old way, no waivers. IF HE CAN DO IT, ANYONE CAN.

It is very apparent you have yet to crack open a copy of Part 95... IF you are supposedly an amateur, you're supposed to have a copy of it there to refer to and to be familiar with. Ignorance will get you no where. Even when

you try to claim such in court. Again, if you get busted, I'm going to laugh my ass off.
I'd be willing to be, you would act as your own defense.... Boy, what a joke that will be.

Message-ID: <bg0ht1$jiraj$1@ID-71746.news.uni-berlin.de>
Source record: 163141

Keep the P=IxE formula in mind when choosing a mobile amplifier.
Power = Current x Voltage
or Current = Power / Voltage
P=Power or Wattage
I =Current draw
E=Energy or Voltage
Example: Tommy truck driver wants to install a 1200 watt spurious
emissions generator on his Kenworth with a 12VDC electrical
system. We just learned that Current draw is calculated by dividing
the Voltage into the Wattage so if the 1200 watt cataract producer has
a Input Voltage of 12 Volts then the Current draw will
be.............................
One Hundred Amps (100). Yes folks you read that right,
that is more current draw than most alternators can produce.So please
be realistic when adding accessories to your already marginal electrical
system or you may find yourself playing the "Prince of Darkness"
on a very wet and rainy night.

True, although it still may be possible to interpret 97.301(e) in such a
way that the no-code Techs have the Novice bands before the FCC changes
any rules. Albeit it is risky for Techs to do that without a declaratory
ruling from the FCC saying that this is the correct interpretation of the
rule.

Mad Dog,
You 'done good', but you're not quite finished, your
answer doesn't take the efficiency of the amplifier into
account. Since the efficiency of most solid state devices
is only about 50%, the amplifier would draw half again as
much more current as your almost correct answer...

Suggest you read Phil Kane's posting on the subject. As he states, the law has changed only in respect that each Administration can choose themselves about the requirement for a code test. It does not mean that the FCC has to abolish a code test. So like Phil says, nothing has changed yet.

Most likley one of the transistors did short, and is passing all the voltage
to the output. Check the transistors on the back side.

But the requirement has not been eliminated in the U.S. and the change
in the international treaty is not a mandate that the requirement for a
code test must be dropped. The FCC can keep the requirement indefinitely
if they desire. Until they do drop it, nothing in the licensing
structure has changed.

The message below also scores a 10 out of a possible 10 on the
"troll-o-meter."

Doing what is suggested below will also be illegal, will put your
license in jeopardy, and will give ham radio a "black eye."

Please don't follow the foolish and irresponsible "advice" given
below ...

73,

All the removal of the international requirement in the ITU Radio
Regulations
does is to allow each administration to determine on its own whether or not
to keep a Morse test.

Most will eliminate it ...

The US has NOT done so yet, so what is suggested above would be ILLEGAL,
put your license in jeopardy, and give all of ham radio a black eye.

And YES, the FCC *does* have records of which Techs have HF privs, so the
writer above is totally wrong.

FCC rules have NOT changed (yet) ... Techs are STILL not allowed
HF privs unless they have passed, and have documented credit for,
the 5 wpm Morse test ...

Don't let the writers in this thread talk you into ILLEGAL operation.

SEE PART 97
§97.501 Qualifying for an amateur operator license.
Each applicant must pass an examination for a new amateur operator license grant and for each change in operator class. Each applicant for the class of operator license grant specified below must pass, or otherwise receive examination credit for, the following examination elements:

(a) Amateur Extra Class operator: Elements 1, 2, 3, and 4;

(b) General Class operator: Elements 1, 2, and 3;

(c) Technician Class operator: Element 2.

§97.503 Element standards.
(a) A telegraphy examination must be sufficient to prove that the examinee has the ability to send correctly by hand and to receive correctly by ear texts in the international Morse code at not less than the prescribed speed, using all the letters of the alphabet, numerals 0-9, period, comma, question mark, slant mark and prosigns AR, BT and SK.
Element 1: 5 words per minute.

Kim, et al,

While currently-valid TechPlus licenses will be renewed as Tech,
the holders thereof, having credit for a 5 wpm Morse test, will
continue to maintain their current HF privs ... the FCC has records
of who has code credit and who doesn't, so no-code Techs should
NOT, repeat NOT, try to use HF.

I understand your caution, Carl. But, somehow, if one is willing to ignore existing R&R, or maybe doesn't even understand them, in an area where they would "experiment," don't they kind of deserve whatever trouble they would have coming their way?

> nothing has changed. The FCC makes the final interpretation and they
> have NOT changed the rules regarding a code test.

The FCC, as a government agency, is bound by international treaty and law, and here, the international law HAS CHANGED, so any regulation that refers to it CAN (and in this case, HAS) been affected.

It's not "element 1 credit" by itself that determines a Technician class licensee's operating privilege on HF. If it were, then I would agree that nothing has changed - but that's simply not the situation here.

1653. The most heavily infested CB SHOP area in the country!

Which State is it, and or which City? I have theories, but from what I SEE, the more south you go, the more CB shops there is. That means Canada has the least, and "THE South" should have the most. I'm not only talking about GOOD shops, but ALL "Shops" including Butcher Chops that put in mod. kits, mega tune, swing kits, and the ilk !

IS there a way we can figure this out? Also a good question would be the opposite--the least populated CB shop areas that need one is another topic! Dave!!

In a word, YES ... they should have their licenses revoked.

HOWEVER, the REST of us don't need the grief that large-scale flaunting
of the rules would bring down on ALL of ham radio ...

OK - I presume that you mean the following text, not the frequency
table:

(e) For a station having a control operator who has been
granted an operator license of Novice Class or Technician Class

This is self-explanatory.

and who has received credit for proficiency in telegraphy in
accordance with the international requirements.

The key to this discussion is, or course, "what are the
international requirements".

Up until the 2003 revision of S25.5 of the IRR, each Administration
was required to determine the proficiency of each applicant for a
license valid for operation below 30 MHz. In the US, this was done
by requiring the applicant to pass Element 1.

Upon the 2003 revision of S25.5 of the IRR, the requirement to
determine proficiency was made optional for each Administration.

That is the only change in the "international requirement" - each
Administration can now decide by its own rules/regulations whether
to require a code test. The code test is no longer mandatory for
each Administration. Each Administration's requirement for code
testing has not been automatically "dropped" or "eliminated" solely
by the revision of S25.5.

Until the FCC changes the rules concering Element 1, the
requirement in the US remains that Element 1 must be passed.

The question of -when- and -how- the FCC Rules will be changed is a
separate item from -what- the rule requirement is up until they
-are- changed. Ditto for how the FCC will handle the issue of
giving -what- privileges to folks who hold a Technician license
but have never passed the code test.

Does that answer your question?

And before July, there was no specific "code speed"
international requirement...yet that didn't allow techs who
could do 2 wpm morse on HF...the FCC mandated 5 wpm
even though the ITU had no speed minimum.

Cheers,

The FCC could, however, make rules changes which are based
on the new treaty because the OLD treaty is gone, done, defunct,
over...even if the US never ratified the new treaty. No nation is now
bound by the old treaty at all.

> Further, the changes in the "international requirements" do not

That is the test, the portion of the regs we are talking about is 97.301(e).
That portion of the regs is dependent on a international requirement for morse
code proficiency to operate on HF. The international requirement for morse code
proficiency has been eliminated.

That's not what 301(e) says, though, is it?

The problem I have in your analysis is that 301(e) itself is one of the rules concerning element 1. It mentions Element 1 per se nowhere, but there is no other rule tying Technician HF privileges to Element 1.

This last statement of yours is indisputable re the General and Extra, in that Element 1 is still required to obtain those licences. However, there is nowhere in Part 97 any statement that a Technician needs Element 1 for anything, instead there is only the wording in 97.301(e).

Not really. The question comes down to the meaning of "and who has received credit for proficiency in telegraphy in accordance with the international requirements". If there is no international requirement to have "received credit for proficiency in telegraphy" for access to any frequency, then a person who has not "received credit for proficiency in telegraphy" is "in accordance with the international requirements" if they operate on those frequencies.

Can we deem that a Tech who has not "received credit for proficiency in telegraphy" has nevertheless "received credit for proficiency in accordance with the international requirements", i.e. is "in accordance with the international requirements"?

Granted that s25.5 as revised allows each administration to determine whether a code test is required. That being the case, the FCC does so in respect of Tech HF operation only through 97.301(e) and in no other rule. If that rule is conditional upon a code test being required by

international requirements, then there is nothing therein indicating that the FCC chooses to require a code test for that particular purpose.

To cut a long story short, the argument rests upon whether "in accordance with international requirements" is a necessary condition in the sentence. If it is, then no-code Techs have the Novice HF frequencies*, and if not, then they will have to wait. This is really what I am seeking comment on, although all other observations are welcome.

*(Although possibly not until after ratification of the new treaty)

On a seperate matter, I will post my petition to the web. I'll post the URL after I've done it. I've been asked not to file it by someone with an alternative plan, but I have not made any decision.

The rule includes the words "has received credit", which gives the FCC
control over what speed they will give credit for.

cw keyer.

There are many disabled who have passed CW exams. The only thing that these bozos are whining about is they are too damned lazy to learn the code. 5 WPM is the easiest thing in the world, like walking.... some just too lazy to work for anything worth having. Mommy and Daddy must have spoon fed them all their lives.

I don't have my manual in front of me to do verbatim rules, but code tests for disabled can be done 1 letter at a time, sentence, etc. Stopped if need be to allow the person time to divulge the message or character sent. As long as it is sent with a "speed" setting to be as prescribed to work out at 5 WPM if sent all at once. In other words, speeding up or slowing down the speed of the character will give it a different sound and could make it hard to decipher at all if incorrectly sent. SO - you have a message consisting of the prescribed number of characters and sent as necessary to the handicapped party to allow them to decipher what is sent... THAT IS how a disabled can be tested..... You can use "lazy" all you want in any form of protest, it still comes out to LAZY.
._.. .- --.. -.-- MOST of the info I related on exam giving to Handicapped is covered in VE manuals, but should be found in FCC Rules as well.

JMS.

I asked Phil about something similar a few weeks ago, and he seemed to
think it was not possible. After further research, I tend to agree with him.
It does look like the changes to that treaty will have to be ratified first.

Think of me as forward thinking person that is sick of the ARRL and ham radio operators that have done nothing but destroy the hobby by crying about keeping morse code to keep people out of the hobby.
Don't worry Phil, BPL is going to destroy ham radio and it deserves to be done away with. If there were millions of ham radio operators then maybe it could be worth saving. Why should a few thousand morse code fanatics keep millions of consumers from enjoying broadband Internet access? America needs BPL to create competition and access to the Internet. A bunch old men with a death grip on their morse code keys need to get the hell out of the way.
Thankfully a group of single minded men did everything to keep people out of the hobby and they can enjoy the S9 BPL signals that will drown out the bands.
Corporate America thanks the ARRL for the help to create a new investment opportunity.

There may no longer be an international requirement for Morse code
proficiency, but there still is an FCC requirement for Morse code
proficiency, and until the FCC drops that requirement, NOTHING HAS
CHANGED concerning U.S. Amateur Radio.

I have in the past taught several disable persons in Novice classes. One had CP and could not even write fast enough to copy 5 wpm on paper. He simply copied in his head and wrote it down when the test was finished. All these handicapped folks worked very hard to achieve this goal and never complained once about having to do so. On the other hand, I had other non-handicapped who whined through the entire course about having to learn the code. I said, "look, it is a requirement to get the license, if you don't want to learn the code then you don't want the license, so make up your mind." I only had one who gave up.

So we have an EXTRA class licensee encouraging illegal operation on the
ham bands. Obviously the code test wasn't a good enough filter in this case.

There is no way the FCC can find it if a tech has passed a morse code test since they don't keep any records. I know that no code techs are on 10m and have been for the last 3 years. No code tech's pick up your microphone and talk on 10 meters.

Phil is not unbiased in this since he is part of the ARRL legal goons that want to ram morse code down the throats of Americans so they can pick a microphone to talk on HF. Read 97.301(e) it depends on the International requirement for morse code proficiency. The requirement for morse code proficiency is GONE.

wrote:

> > Today there are no international proficiency requirements for morse code.
>
> Actually, the new treaty sez each country can decide for itself.

Exactly and 97.301(e) depends on the international proficiency requirements
laid out in s25.5. Now that there are no longer any proficiency requirements in
s25.5 then 97.301(e) is affected.

25.5 Any person seeking a license to operate the apparatus of an amateur
station shall prove that he is able to send correctly by hand and to receive
correctly by ear, texts in Morse code signals. The administrations concerned
may, however, waive this requirement in the case of stations making use
exclusively of frequencies above 30 MHz.

New Text of Article 25.5 (effective July 05, 2003)

25.5 ï¿½3 1) Administrations shall determine whether or not a person seeking a
licence to operate an amateur station shall demonstrate the ability to send and
receive texts in Morse code signals.

s97.301(e)

For a station having a control operator who has been
granted an operator license of Novice Class or Technician
Class and who has received credit for proficiency in
telegraphy in accordance with the international
requirements.

The US government has no standards for a technician to know morse code. To
receive a certificate yes, but the only reason a tech could not transmit on HF
was because of 97.301(e). Now that no code technicians have no requirement in
international law to know code they should be allowed to transmit on their
allocated frequency. That doesn't mean they can hop on 20 meters, it means they
can operate voice/data/cw 28.1-28.5 or even CW on 80, 40 and 15 meters.

The reason that 97.301(e) was written that way is because the government
expected s25.5 to be just deleted and techs could then operate HF. The ARRL
with their fancy footwork is trying to stop the removal of morse code as a
requirement for a HF license.
But don't worry it looks like BPL is going to destroy the bands anyway and you
morse code nuts can keep your death grip on those keyers. The ARRL has done
nothing but help put ham radio in it's grave.

> requirement in the US remains that Element 1 must be passed.

That is NOT what 97.301(e) says. 97.301(e) does not require a tech to possess
element 1, it requires the tech licensee to meet the international standards
set down in s25.5 to transmit on HF. The reason 97.301(e) was written that way
is because the FCC expected the s25.5 reference to be deleted, but it was
changed. The fact that it was changed does not mean a tech licensee is not
meeting the requirements set down in 97.301(e).
It doesn't mean a tech can get on 20 meters, it should mean he can operate on
HF in the allocated tech bands according to the FCC rules.

We are talking about 97.301(e) and it does not require a technician to possess element 1. It requires the tech to meet s25.5 which NO longer requires the tech to know morse code. The reason 97.301(e) was written that way is because the FCC expected s25.5 to be deleted.
Don't you see the ARRL is trying to pull a fast one? Read 97.301(e) like you don't know anything and then read s25.5 to see what we are talking about. Don't worry about the test, it has nothing to do with the test.

You can lead a pig to water, but hams are something else.

 Only the contingency that doesn't wish to work for something is
bitching and crying about code. Your statement would be just as valid if
you would have wrote "If anyone thinks the FCC doesn't know that people
want the code requirement retained, they are very, very uninformed."
"Stupid", is one who fails to see both sides of an issue due their
myopic view and inability to compromise. I find it ironic NCI's
recruiting slogan is something akin to "Helping to preserve Ham Radio"
while attempting to abolish a staple and foundation of what hammie radio
was built upon. "Preservation through elimination and
discardment",,,LOL,,what a lot!

>A 'protest' would accomplish absolutely

>nothing beneficial, and would do harm instead.

Mr. Lalli, you have no way of knowing such things unless you are a seer.
KC8LDO recently affirmed how one can not tell the future. In this

aspect, he was correct.

>Talk about getting what you wanted and then

>shooting your self in the foot! Just a little bit of

>thought would

>show you how silly the whole thing is...
>   'Doc

>PS - 'Civil Disobedience' is just a cowards way
>of saying crime.

 You are a fascist individual. For your information, this country was forged by the exact behaviors which you refer to as "criminal". If the colonists were "cowards" as you allude, it leaves no doubt as to who the heros are in your eyes. No, Mr. Lalli, a "coward" is a hammie who attempted psuedo-anonymous, unprovoked harrassment of a cber via usenet,, ,then claimed his server was on the blink. A "coward" is one who quietly slipped away with his tail between his legs after losing his posting access for such behavior. A "coward" is a liar who lied about being busted for not following the rules, even when presented with the email from your ISP claiming your account was "terminated."
  A "coward" is one who calls other's names while hypocritically tossing huge stones while living in a glass house. A "coward" is one who attacks others under the false premise of concern for the rules while selectively ignoring the rules he feels he is above. Gee, Paul,,you're a cowardly liar.

There are cases where flashing lights are used for such a thing OR vibrating surfaces..... so being deaf is no excuse either. There ARE provisions. The main thing is, that IF the person is that handicapped, it is up to THEM or their family to provide any testing accessories to suit their needs, to allow the VEs to send the text. The VEs are not required to provide specialized equipment to cater to the handicaps needs.

If it walks like a duck, and quacks like a duck.....

My first thought when the question pools were published was that
the code test is the only thing that will preserve ham radio from
dropping to the lowest possible common denominator. Looks like
the isntant case is pretty much validation of that viewpoint.

BUT UNTIL THE AMERICAN LAWS are rewritten, changed, updated (pick your
term), the CW requirement STILL exists in our Radio Laws.
You can NOT sidestep laws that exist. A law may be come effective in one
sense but when it affects so many countries, it takes time in the
administrative governments to trickle down. As I understand it, there are
yet, a few countries who will refuse to abide by the International Treaty's
standards to the letter.
The International Union decided to drop CW as a requirement, that does NOT
mean WE have to. IF the other countries are not so willing to go with it
either, then perhaps the FCC won't be so quick to jump either.

Get off your lazy ass and learn 5 WPM CW. It is not any harder than learning
to drive a car or program a computer. IF it is worth it to you to use 10
meters or any other band, then get your act together and make it a mission
to actually LEARN something. "I" am NOT one of the biased ARRL people, I
don't and won't belong to the ARRL. So my opinion is based purely on KNOWING
that is doesn't take a hell of a lot of work to LEARN - CW @ 5 WPM.
If the handicapped can do it, ANYONE CAN. If you can't, then you're not
handicapped, you're plain brain dead and lazy.

JMS

The compliance was met when it was required by international regulation
(and it is still required by FCC regulations). According to your logic
then no license class has any HF privileges since we met the compliance
of an international regulation that no longer exists. So all license
classes that took a code test are now non-compliant, so looks like we
are all off HF until the FCC changes the rules.

The international requirement meant that all entities had to require a code test for HF privileges. Now the international requirement has been dropped, now each entity can decided for itself if it wants to require a code test for HF privileges, and until the FCC changes the rules, it is still required for U.S. hams. What is so hard to understand about that?

Phil from now on I will refer to you as Prince Jr.

Listen Prince Jr., I can discuss anything regarding US law and express my opinions. Just because you are ARRL lawyer trying to force morse code down the throats of the disabled and helped destroy Amateur radio by keeping it a elite club doesn't mean I shouldn't voice my opinion. I have never said I was a lawyer or even a wannabe lawyer, good god I bet you are proud of your pals that are going after ten year old children trading muppet songs on the Internet.
The reason disability recognition didn't change was because there was a international agreement that stopped the disabled who could not receive code from being exempt. Now that the international regulation has been changed to delete mandatory morse code proficiency the disabled should be provided a exemption promptly. (That is my opinion, is that OK Prince Jr?)
Is it ok if I express my opinion Prince Jr? Or are you like the morons sending me carbon copies of complaints they are sending to Hollingsworth AKA "Prince" for daring to tell the FCC and the ARRL they are bone heads that have destroyed Amateur radio for selfish reasons.
I mean I'm not the only person that thinks this about the ARRL, FCC and the morse code lunatics that have kept the ranks of ham radio so small it is ripe for the pickings by the commercial entities. The utilities will destroy HF with BPL and the rest of 50 Mhz and up bands that are worth billions of dollars will be sliced up in short order.
All this time I was praying the ARRL and FCC would come around and I was a sucker to be a ARRL member for all those years. Then when it is time to dump the code the crazed bunch of "morse code or death" bunch sneak one in the back door. Now the cocksuckers want to drag out the death of morse code requirements for years.
Who the hell was the ARRL board and staff saving the bands for? It certainly isn't for the average American citizen to become a ham radio operator. If you listen to ten meters it appears the truck drivers are now taking it over, so thank the ARRL and FCC for that.
Thanks for sharing Prince Jr. I hope it was OK for this ham radio operator of twenty years to express his opinion. Should I include a legal disclaimer on all my post from now on? I hope you will not report me to the Oregon Bar Association.

When was the last time you heard about amateur radio in your local newspaper
or on your local tv stations? When your local ham clubs have an event, be
it club meetings, Field Day, hamfest or something else that the public might
like to know about, do they bother to get listed in the local events columns,
and try to get mention on TV and radio, and even post to your local
newsgroups?

Or to put it another way, how did you find out about amateur radio?

When I was a kid, I learned about it when there was an article in
a publication intended for children. When I discovered hobby electronic
magazines, amateur radio was still a part of those magazines, though
it was right on the cusp of their disappearing. But when I could try
for a license, I had to dig around to find a local ham club, going to
the ARRL because I didn't know of any local clubs, and had no way of
finding them.

One of the failures of amateur radio is that it doesn't do a particularly
good job of outreach. Notice there is a big difference between trying
to sell something to fill seats, and trying to share something because
it's important to you and you want others to know about it.

Over the 31 years since I've been licensed, my impression is that
amateur radio has increasingly disappeared from public view. Yes,
there is the argument that ham radio has less and less relevance,
but that just means people need to work harder at conveying thei
importance of the hobby to themselves.

Meanwhile, the licensing requirements have become less and less.
About fifty years ago, you might say the halfway point of
amateur radio, your FCC introduced the then-novel novice license, to make
the entry requirements simpler. A simple test, a 5wpm code test, limited
operating priviliges, and only valid for a year. Over the years,
that was modified for less restrictive rules, and more priviliges.
The US Technician license came out at the same time, and originally
was only good for 220MHz and above. That too was modified tremendously
over the years. Then the code was dropped for the technician class.

Here in Canada, we had a no-code license a quarter century ago. But virtually nobody used it. Then in 1990, we got restructuring, and there was an entry level license that did not require a code test.

So over fifty years, half of the time that amateur radio has been around, it has become increasingly simpler for people to join the hobby in North America.

Yet, instead of doing a better job of outreach, the focus is always on making the license requirements simpler. Keep it up, and there will be absolutely no entry requirement.

You think we need numbers to justify the bands, so you want to lessen entry requirements. But that may be a false path. Maybe we justify the ham bands because it is something more than a place to yak it up.

Maybe the kids that use to come to ham radio aren't even hearing about the hobby in the first place. Maybe if they knew, it could be as appealing as it was to me when I was ten. Maybe like me, the code and theory tests are not impediments to joining the hobby, but a sense of accomplishment when they are passed. I was twelve, and went from 0 to 12wpm in four months, and I know I was always disappointed that I took the test (well, I had to go back a second month to pass the code test) in the last week of grade 6, because I was unable to boast to the kids at school.

Maybe the need or lack of a code test isn't an issue to many people, because they haven't heard of amateur radio in the first place.

Methinks you don't have a clue about the history of amateur radio. It didn't start when some regulatory body decided there should be a place for people to talk to their heart's delite. There were radio hobbyists almost as soon as Marconi spanned the Atlantic in 1901, when there were no rules and there wasn't even any use for radio. Those hobbyists played with this new thing, and in part helped to propel the field along. I'm not sure you could separate amateur from professional in those days. It was only once there started to be uses for radio that any rules were put in place. And amateur radio became a service in those early days by virtue of staking out a claim right from the start.

Dilute the entry requirements too much, and what do you have to justify the bands, other than large numbers?

But shift it back to where the test is not just an obstacle to overcome, and you may again make the hobby something that society in general benefits from.

Most of the assertions that a code test should be required are
based on the (illogical) premise that if an idiot (the poster)
can pass the test, anyone can and everyone should.

Keith works that one to death.

Tell that to my Taiwan, R.O.C. PC-122 that works great
with 7 feet of coax in the mobile. The TS-250 likes it, too.

BTW, I'm still fuzzy on the concept of specific lengths of
50 ohm coax with 50 ohm radios and 50 ohm antennas.

Please enlighten me, Dave.

1736. Re: Address the issues, Skippy! Repost #3

Newsgroup: rec.radio.cb
Date: 2003-07-28 21:45:56 UTC
From: Skipp would rather be back in Tahoe <SteelyDanConcertlastnight@yahoo.com>
Message-ID: <bg45ikknc1@woodrow.ucdavis.edu>
Source record: 163267

:>How many of them are currently making rf amplifiers like the
:>example..? How many, if any current rf amplifier manufactures use a
:>specific sequence relay in their circuits..?
:>
:>The answer is close to if not zero... back ye heathen with
:>thy dated technology. Chase ye not windmills in this here land.

: More than you think, Skippy. Any good designer of common-cathode
: tetrode/pentode amps will add a sequenced relay specifically to make
: sure the screen is last-on-first-off (when the screen supply is
: seperate from the plate supply).

I believe you were talking about make before break TR relays frankie...
Your post just above is nothing special... nor is it news. Possibly
an attempt to change the subject to power supply squence relays from TR
switching..?

:>> >A relay "Sequencing" notation seems to be missing from the circuit
:>> >diagram. You are again chasing windmills...
:>>
:>> And you are having a hard time with your reading comprehension: see
:>> above where I said, "Schematics don't usually indicate when a relay
:>> operates in this way". Regardless, sometimes the sequencing is done
:>> with two relays, and sometimes with one relay using different contact
:>> gaps. But you will be hard-pressed to find a schematic that makes any
:>> notation about the latter. Anyone that has ever done any amount of
:>> radio repairs knows exactly what I am talking about. It's obvious that
:>> you don't.
:>
:>Remember mr off topic.... the original amplifier circuit in question has
:>one relay.

: I never said it wasn't, Skippy. I guess I have to rephrase this a
: third time so you can understand it: Adding extra gap to a pair of
: contacts in a relay (by slightly bending the amrature) has the same
: effect as using two sequenced relays.

Nice song and dance... but again IT'S NOT USED IN ANY CURRENT AMATEUR
OR COMMERCIAL AMPLIFIER CIRCUIT, nor was it common in past commercial or
amateur amplifiers.

:>Other than you gassy cloud sequence story, can you provide any
:>modern rf amplifier circuit using a sequence relay...

: I'm willing to bet that the amplifier in question does.

It doesn't...

:> or any mention
:>of bending relay armature contacts or using said type of relays in
:>their respective parts/owners manual.

: You probably won't see such a notation in any owner's or service
: manuals since these relays are typically ordered from the manufacturer
: with the specified gap (or 'contact delay' -- same thing). All you get
: from a service manual is the replacement part number. Replacing one of
: these with a general-purpose relay -without- checking the contact gaps
: on the original can lead to some serious trouble (and I learned THAT
: one from experience).

Brand and model of said lesson device...?

:>Why is it not widely mentioned in modern manuals and text books..?

: Sequential relay circuits ARE mentioned in many manuals and text
: books, even in the ARRL manuals. It's up to the designer to choose how
: best to implement the circuit.

Nice try at a side step dance... I was talking about your oh so popular
sequenced relay contacts... on the same frame. Don't try to blend it into
a sequenced relay layout. We were talking a single relay frame, not more
than one relay.

:>> >Your bent armatures suggestion is bad news.
:>>
:>> Such "bad news" that the practice has been used by almost every
:>> manufacturer of transceivers since they were invented? Right. Uh-huh.
:>> Ok. Next you are probably going to proclaim that relays are "dated
:>> technology". Sure thing, Skippy. Whatever you say.
:>
:>The subject was a simple rf amplifier circuit... you just want to dance
:>the night away on off topic poop again.

: Why are they "bad news", Skippy? And if they are "bad news", why have
: they been used for decades?

Where... and the bigger question is, why are they not popular now..?
Simple answer: "really dated technology".

Because they are not reliable, nor are they practical, nor are they cheap.

:>In regards to transceivers... rather than the stupid practice of hosing
:>relay contacts... Motorola, GE, RCA and EF Johnson (along with most
:>other mfgrs) simply delayed the RF long enough for the antenna relay
:>to transfer.
:>
:>If you ever had your face in any of their manuals, you'd see delayed
:>A+ and A- functions doing the task. Hey, what a concept..! In
:>specific, see "channel element ground" functions.

: Those are common practices with diode switching circuits. Sequential
: relays accomplish the same thing, and when a relay is going to be used
: in the circuit it's much easier to gap a pair of contacts than it is

: to construct a power line delay circuit (which usually won't provide
: for the disconnection of the RF final before it powers down, burning
: out the relay contacts before their time).

There is a reason few if any amplifier - radio mfgrs are (might use a)
using sequential relay(s). You'd better jump from this "Titanic Topic"
before you go down with the ship.

I guess all the keyed A+ and A- used by companies like Motorola (for
decades) prefer the harder route. Come on now frankie...

: To verify my statements, all you need to do is to find an old radio
: that uses a T/R relay, take off the cover and look at the gaps. If you
: don't have an example of your own, email me your address and I'll send
: you a whole box full of old T/R relays from a wide variety of radios
: that use gapped contacts. Some of them have bent armatures and some of
: them have armature spacers, but all of them were built with the same
: objective -- a sequential relay.

I believe the original subject was an Amplifier... was it not..? The
last radio with a t/r relay was made ...? .... years ago..? ... decades
ago..?

:>Yeah, cranking on relay armatures is pretty bad news... especially
:>since many of them are sealed reed relay types. But you knew that
:>and obviously holding back to see if I'd mention it... yeah right.!
:>
:>Hard to crank on a reed relay when its sealed. Yeah baby..!

: Reed relays don't carry RF very well. And they certainly don't carry
: power because it tends to vaporize the Hg and destroy the relay. They
: are usually only used for low-voltage DC and audio switching. But you
: knew that, didn't you Skippy?

I'm laughing at you big time here frankie.. I guess decades of Motorola,
GE, EF Johnson, Aerotron rf amplifier and radio switching with reed relays
doesn't prove anything. I guess its time I went and threw out the large
box of reed T/R relays I have from salvaged high power Motorola Micor
Radio Equipment. I got some nice/neat pictures of their very common
yellow RF switching (reed) relay I could send if you'd like to view them
while eating your crow.

:>> >> And the real issue with the relay in that amp is the fact that there
:>> >> is only one for both the input and output. If there is one thing that
:>> >> Pride got right with their 100 is their use of seperate input and
:>> >> output relays.
:>> >
:>> >ZZZZZZZZZZZZzZzzzzzzzzzzzzzzzzzzzzzzzzzzzz.....!
:>>
:>> Gee, another "I don't care" response.
:>
:>One wonders why your so hot to tell your stories to me... when you
:>should be sharing another of your famous verbose analysis with

:>the original author. I promise not to laugh too hard if you do.
:>Just leave out the equalization networks...

: I have had several discussions with Brian on many of the issues he
: raised with this amp, including the use of a single relay. He was
: right on the money with everything he said and I don't think he should
: have stopped when he did. He has learned good information from those
: discussions, although I didn't think he ever would at the time. You
: should follow his example, Skippy.

I appreciate your concern frankie, but you have me confused with someone who really cares about what you post.

Hopefully Brian did not go for your dated relay information. Arcing / bending relay contacts for use in RF amplifiers is bad news. Wasn't even great back in the 50's, 60's and 70's. Bad habits die hard... you prove that quite a bit in your posts.

My only gripe with the code is the testing. It is stated as a 5 word per minute test. When I challenged the test a few weeks ago I found that it is actually anywhere from 13 to 18 words per minute, not 5 words per minute. The 5 words per minute is a lie....

Why not tell it like it is.... Those giving the test do not want to make it easy for anyone who has a learning disability or not. I have never been able to memorize anything easily when in school, and was accused of being from lazy to stupid. My father told me that I was ignorant because I was partly colorblind. I do not want sympathy, just after studying for almost a year to pass the 5 word per minute test for what it is suppose to be not what someone who is more proficient with the code wants it to be.....

If my General CSCE expires again (this will be #2) I will never take it again and will have lost desire in a hobby that I grew up working in for the last 39 years.......

C.

Not trying to be a smart ass here...but...how do you know it was 13 if you say you can't copy 13???. Could it be he was sending the characters fast and making the spacing long. I.E. Farnsworth method, which is the recomended way to conduct a test?

If you want to quit. Thats your choice. I would suggest you go to a different test place with different folks instead.

The test is given at 5 words per minute. They use a faster character speed
but make the letters further apart. It is actually easier this way because
the brain has more time to react to the character before it has to go on to
the next one.

If you were memorizing the code, that was the problem. That's not the right
way to learn it. There's quite a bit of material out there on the internet
on the right way to learn code. For starters, work towards a reflex
reaction. i.e. Hear the sound, write the letter. Don't think about the
dots and dashes. Practice every day for 30 mintues per day EVERY day or
almost everyday. There are lots of computer programs out there you can
download from the internet and every person has their favorite. Set it for
an 18wpm character speed but 5wpm word speed. Try the G4FON program. It's
available for free on the internet. I apologize for not posting the website
but I don't happen to have it anymore.

Practicing once or twice a week won't get it. You fall too far backwards
between sessions. Memorizing dots and dashes and then trying to write the
letter slows you down so that you can't keep up.

Read "The Art and Skill of Radiotelegraphy". It's available for free on the
internet. The author did extensive research on how code should be studied.
The biggest problem is that too many people are told to use study methods
that hold a person back rather than move them forward. Another problem is
unrealistic expections. They see the whiz kids get it in a week and think
they should be able to do the same. They're the exception not the rule.

The code is far easier than most things that you have learned in life if you find the correct way to study it and put in the amount of time needed.

I agree with you 100%. The reason in my opinion is that the ARRL kept the morse code requirement for HF access and that kept a lot of my teenage friends out of ham radio way back in 1982 and through the present day.
Today kids now have instant voice communications via the Internet and cell phones and can even send pictures and text messages with their phones. Now that the Internet is here and advanced digital cellphone is in every middle class kids pocket technology has passed by ham radio.
Hams are the now the old technology brushed aside by technology advances. The ARRL just couldn't let code die and now it is too late. IMHO.

What you just described, about memorizing the code, happened to me. I started to try to learn the code at 12 years old. My mom bought me a record...yeah thats right A RECORD..hi. And I thought I was hot stuff...but when I actually tried to receive CW off the air, at a very slow rate. Listened in the Novice bands. I found I didn't know a thing.

A local ham told me I had memorized the record. And that is exactly what happened. He then gave me the ARRL license manual with the proper method and helped when he could.

I eventually RE-LEARNED Morse and got it right. I passed the Novice and in 3 months passed the 13WPM General in front of the FCC.

I am not solid at 40 or so.

So Dee's advice is right on target.

I asked why it seemed so fast. I was told by the VE that he gives all
code test at least 13 words per minute if not faster.....

I have sent out a couple of e-mails requesting imformation of how tests
are given ie, speed and if fonsworth method was used. I do not wnat to
know the test iteslf as that would defeat the purpose of the testing
session. I have yet to receive an answer from any VE...

All I ask for is to know what speed I need to be studying as it all
sounds different to me at each speed....

Keith, why don't you solicit the opinions of some deaf hams? There is a group called HandiHams that you could ask--if they would respond. You could also get on eHam.net, and qrz.com and pose the question in the forums. The question, I suppose, would be: Do you, as a deaf ham, agree that the government should require that you pass a minimum CW requirement for amateur radio privileges at that level?

My guess is most deaf hams are not going to mind a bit. Note that I said *most.* I am sure there are some out there that may object.

No I am not doing a memorizing of each dit and dah and converting
method. My problem is my brain does not react fast enough to decide what
each character is before the next one is sent. I just get further
behind. I practice at least 20 to 30 minutes usually twice a day if not
more. I use computer programs and ARRL training CDs.

I will check "The Art and Skill of Radiotelegraphy". Thanks for the
encouragement.

No I am well aware of that point. However, the FCCs implementation of requiring a code test is different for Techs than it is for Generals and Extras. Generals and Extras are required to pass Element 1, and Techs are not. Access for Techs to the Novice HF subbands is __not__ conditioned on passing Element 1, but only upon having "received credit for proficiency in telegraphy in accordance with the international requirements" (from rule 97.301(e)).

Given that s25.5 leaves it open for each administration to determine if a code test is required, with no mention of any specific frequencies, the only rule the FCC chooses to make for Tech HF access is 97.301(e), which in turn includes the words "in accordance with international requirements", i.e. in accordance with s25.5.

So, the FCC rule implies that a code test is required if s25.5 requires it, and s25.5 says that a code test is required if the administration (the FCC) requires it! This is a circular process, in fact one that could go around in ever decreasing circles! Each rule appears to be conditional upon the other! Obviously those who drafted the rules did not intend this, but the ITU rule has changed in a way that was not anticipated.

It would seem to me that if two rules each require that a specific condition must be met only if the other rule requires it, then in fact

that condition does not have to be met.

None of us could react fast enough at first. You are not alone. When you are copying and miss a letter, just skip it and catch the next one. If you let your mind focus on what you missed, you will then miss several others that come after. DON'T TRY TO GET THE MISSED LETTER AT THAT TIME. Just write an underscore and go on so that you don't miss following letters. This takes a little practice by the way as we all want to be perfect so we sit there and try to figure it out while falling further behind. If you get a lot of blanks at first, that's OK. Just keep working on it.

When you take the test, you are allowed time to go back over your paper and fill in what you think the missing material might be. Here is an example (using an underscore for characters that you miss on the copy).

What you originally copied: NAM_ IS JO_N.
Now if you look back over your copy, fill in what you believe the missing letters should be. In this case, the text sent was most likely: NAME IS JOHN.
Then on the test questions, you will probably be asked the name and there you have it right there on your paper.

When I took my extra code test (20wpm), I had a lot of underscores on my paper but despite that I was able to successfully answer the country question (it was Switzerland) even though I only had about half the letters copied on my sheet.

Don't email. TELEPHONE them. Ask them what is the character speed and what is the overall word speed. They can have the character speed at 13 (or faster), but the spacing must be adjusted to end up at 5wpm overall. It is not proper test procedure to have the test at an actual 13wpm when it is supposed to be 5wpm.

Talk to the VE team leader that you will eventually be testing under so that you do get the correct character speed for the test that you will be planning to take.

Finally try to find someone who is knowledgeable in correct training methods to "Elmer" you if at all possible.

Ahh, that training CD! I used it, and failed miserably at it. Turns out
I memorized the darn thing. You might try a program that sends out
random groups or even makes up QSO's.

If it's OPTIONAL (on a country-by-country basis, but that doesn't matter; any
basis will do), then it's NOT A REQUIREMENT. One cannot comply with a
requirement that doesn't exist - and that's the problem.

> Until the FCC changes the rules concering Element 1, the
> requirement in the US remains that Element 1 must be passed.

But that's not the requirement. 47 CFR 97.301(e) made DIRECT REFERENCE to the international requirement, not to "element 1 credit." Certainly, there's no need to cite "element 1 credit" for the novice license!

If it had cited "element 1 credit" as the second requirement for technican licenseholders (novice licenseholders already have it by definition in .501), then I would agree that nothing had changed. But that's not how the FCC wrote .301(e) and you know it! ;-)

I don't believe that's the correct question. It's not a matter of no-code technicians now having HF privileges. It's a question of "coded techs" and Novices having their HF privileges STRIPPED on account of one of the two requirements now being untenable.

...And that means that it is an OPTION, not a requirement.

A requirement cannot be bypassed like an option can.

But until the FCC acts to remove such a reference, that doesn't mean that it's not operative in the meantime.

How does one comply with a requirement that doesn't exist?

But if it's an OPTION for each country, it's NOT an international REQUIREMENT.

Words have definitions. These terms are self-evident.

How does one show compliance with a REQUIREMENT that does not exist?

With most people having computers, learning CW should be so much easier
nowadays. Not like when I was ten, and bought a telegraph set so I
could learn Morse Code, not realizing that sending is not he same thing
as receiving.

One of the things I've wondered about is whether one could get used
to the sounds of the letters subconciously via a program that
sends the morse letter everytime you press a key on your keyboard.
You wouldn't really being paying attention, but it would be a positive
reinforcement of what sounds go with what letters. I'm not sure
it would be a completely painless method, but it would either help
get someone used to the sounds, or reinforce the learning already done.

But I'm not sure anyone has cooked up such a program.

At the very least, with people spending so much time at their
computers, I'd suggest running a CW practice program, sending
random letters, while you do something else at your computer.
Set the volume relatively low, and don't even bother trying to
copy it; just use it to get used to the sounds.

I suspect some of the problem some people have is that they are
trying way too hard. They see the code as an obstacle, and are
fighting it all the way. "Now I'm going to do my hour of code
practice". In the old days, that would mean going to a code
practice course, or buying one of those records (I had one to

start, and I think it did help), or listening to a receiver
where the code might not be optimal or under the best conditions.
You sit there with your pen and paper, and struggle to get it
all right. But moving it into the background makes it less important,
and perhaps by simply getting used to the sounds before struggling
to get it all, it might all come easier.

> accordance with the international requirements", i.e. is "in accordance

> with the international requirements"?

I've taken exactly the opposite approach: IF there is no international requirement (it's now OPTIONAL), then how can one show compliance with a requirement that itself no longer exists? My answer is that one CANNOT be in compliance with a non-existant requirement, and thus HF privileges defined in .301(e) have been STRIPPED effective July 5, 2003 from those who previously held them, not granted to those who didn't have them.

> Granted that s25.5 as revised allows each administration to determine
> whether a code test is required. That being the case, the FCC does so in

> the FCC chooses to require a code test for that particular purpose.

Having a choice (regardless of whom holds the choice) means that it is an OPTION, and options aren't requirements. A requirement means that there is no choice; no option. These are OPPOSITES.

> To cut a long story short, the argument rests upon whether "in accordance
> with international requirements" is a necessary condition in the sentence.
> If it is, then no-code Techs have the Novice HF frequencies*, and if not,
> then they will have to wait. This is really what I am seeking comment on,
> although all other observations are welcome.

What novice HF bands? Novice licenseholders are likewise affected despite the fact that their licenses DO include element 1 credit, because that credit has no bearing on the ability to use those bands. If element 1 were an important fact, then 47 CFR 97.301(e) would have been written that way instead of making reference to the "international requirement" [that no longer exists.]

> *(Although possibly not until after ratification of the new treaty)

Ratification won't make a difference here. Rejection of the treaty might!

Receive credit for what? A requirement that no longer exists?

How does one demonstrate compliance with a non-existent requirement?

I'm not confusing anyone. Read 47 CFR 97.301(e) for yourself and tell me where
it refers to element 1 credit....

Even if techs HAVE PASSED element 1 credit, they no longer possess HF
privileges.

Which means that NO ONE can be compliant with meeting the now non-existent
regulation, and therefore, no technician or novice licensee has any operating
privilege below 30MHz.

Wrong. What it means is that there is a requirement in the FCC regulation that
NO LICENSEE CAN MEET.

The international change does not mean that no-code technicians can use those HF frequency ranges. It does mean that coded-technicians and novices can NO LONGER use them - because none of them can show compliance with a requirement that no longer exists.

> The reason that 97.301(e) was written that way is because the government

It does not mean that at all. It is another perfect example of FCC regulation-writer shortsightedness, just like happened with the April 2000 changes.

I agree with the above as to what 47 CFR 97.301(e) says.

I disagree that what is left means that any Technician or Novice has any HF privilege at all. The FCC rule still says that these licensees must show compliance with a non-existent regulation. Since they CANNOT COMPLY with a non-existent [international] regulation, they LACK the privilege.

> The reason 97.301(e) was written that way is because the FCC expected the
> s25.5 reference to be deleted, but it was changed. The fact that it was
> changed does not mean a tech licensee is not meeting the requirements set
> down in 97.301(e).

I disagree. There is a [U.S.] requirement for these licenseholders to meet the international requirement. Show me how they can do this if the international requirement doesn't exist.... It's impossible for them to demonstrate compliance, and therefore, they cannot meet all of the U.S. requirements (one of which is to meet the non-existent international requirement), and thus have no such privilege.

> It doesn't mean a tech can get on 20 meters, it should mean he can operate on
> HF in the allocated tech bands according to the FCC rules.

What you think it should mean and what it does mean are as clear as night and day.

S25.5 no longer REQUIRES anything. So how can one show that one has met the
requirement? That's impossible.

> Don't you see the ARRL is trying to pull a fast one? Read 97.301(e) like you

Not totally correct. The FCC doesn't have information on techs who passed
element 1 after April 15, 2000.

However, what does having passed element 1 for technicians have to do with the
.301(e) privileges? I see no such requirement.

> around in ever decreasing circles! Each rule appears to be conditional
> upon the other! Obviously those who drafted the rules did not intend this,
> but the ITU rule has changed in a way that was not anticipated.

If a government can choose NOT to require something, then it is not an international requirement but an option. The FCC regulation is dependent on an international requirement that no longer exists, so how can anyone show compliance with it?

They can't. What this was was a way for the FCC to get rid of the "technician" HF privileges and make the novice license so useless that the latter will either upgrade or die. They dont' have to worry about the "tech plus" class anymore - there isn't one! 47 CFR 97.21(e) [or whatever it is] that designates renewals of technician plus licensees as technician demonstrates the FCC's real intent on this issue.

> It would seem to me that if two rules each require that a specific
> condition must be met only if the other rule requires it, then in fact
> that condition does not have to be met.

I disagree to as what it says.

I state that what the FCC wrote is that the licensee is to meet a requirement that is now impossible to meet because it no longer exists.

Better me as "Prince Jr." than you as "The Little King" or are you
too young to remember that comic strip ?

Call me anything that you want but don't call me late for dinner or
a juicy pile-up on 20m.

> Listen Prince Jr., I can discuss anything regarding US law and express my
>opinions.

And if you do it often enough even more people will realize that
you are off-base.

>Just because you are ARRL lawyer

Even though I am an ARRL Life Member I do not work for them other
than to volunteer my service - for free - to advise ARRL members in
what the law is and how it applies to them, just like I did at the
County Free Legal Clinic several years ago. I am, in fact, the
engineering manager and regulatory counsel of one of the largest
communications consulting engineering firms in the country,
specializing in public safety clients.

>trying to force morse code down the
>throats of the disabled and helped destroy Amateur radio by keeping it
>a elite club doesn't mean I shouldn't voice my opinion.

A real bozo you are. Did you read my filing with the FCC in the
Restructuring Docket where I came out clearly in favor of dropping
all code testing requirements as soon as possible? And I haven't
changed my mind since then, either.

Wanna talk "disabled", bozo? I am disabled, both of my brothers are
disabled, mu wife is disabled, and my son is disabled. All of us
are respected professionals in highly technical fields, three of us
are hams and none of us has ever asked for one iota of "special
treatment" along the way. e all feel that it is immoral and

downright obscene to use our disabilities as a weapon,

Where do you come off spouting about "the disabled" ??

>I have never said I was a lawyer or even a wannabe lawyer.

Then why are you spouting off as if you were one?

>good god I bet you are proud of your pals that
>are going after ten year old children trading muppet songs on the Internet.

Don't get me started on that. Among other things, my wife lives off
of copyright royalties from stuff she creates and gets published....

>The reason disability recognition didn't change was because there was a
>international agreement that stopped the disabled who could not receive code
>from being exempt.

The reason that disability recognition didn't change was that the
FCC showed that it was making the accommodations required by the ADA.

>Now that the international regulation has been changed to
>delete mandatory morse code proficiency the disabled should be provided a
>exemption promptly. (That is my opinion,

I feel that the FCC should delete all code test requirements for
-everybody- promptly. I've said it before, several times, right here
on your screen, and I'll say it again. Did you not pay attention?

> Is it ok if I express my opinion Prince Jr? Or are you like the

Don't know if anyone has considered this, but if the BPL lines are going to radiate intereference, would it not stand to reason that the lines would be (not by choice) accepting outside RFI sources???

Just a thought on the issue,

No I wasn't. I know what I'm talking about, but you obviously don't. Notice I
said "last-on-first-off", not "make before break". And BTW, when talking about
relay and switch contacts, the proper terms are "shorting" and "non-shorting",
not "make before break" and "make after break" -- just a little tidbit of info
that will help you sound like a real tech even though you aren't.

>Your post just above is nothing special... nor is it news. Possibly
>an attempt to change the subject to power supply squence relays from TR
>switching..?

You say that you have lots of experience with tube amps. If so, you should know
exactly what I am talking about. But you don't. You don't have anywhere's near
the experience with tube amps that you claim, or else you would know that when
you apply screen voltage without plate voltage in one of these big power tubes
you start melting grids! And you should also know that if you don't hold the
load on your output tank until -after- the final powers down then you are going
to blow your receiver's front end. Sequential relays are an essential part of
any power transmitter, whether it's tube or solid-state.

Single sequential relays were most certainly common in commercial equipment and some amateur equipment of the past, and are still used in some current stuff. Like I said, I have a box full of such relays. I'll send you some if you want, but you pay postage.

>:>Other than you gassy cloud sequence story, can you provide any

Did you design it? Do you have one handy and mic'ed the contacts? Or are you just psychic? But you may be right, since that amp isn't exactly the best example of RF engineering anyway.

>
>Brand and model of said lesson device...?

Believe it or not, I actually remember the model even though it was almost 25 years ago -- it was a 2-channel Motorola T51GGV. I remember it well because the first time it came into the shop it needed a new T/R relay, which I replaced without knowing about the contact gapping requirements. But that darn radio came back to the shop several times afterwards because it kept blowing the final (a single 6146). That's when I got the lesson (scolding) about contact gaps from Stan (the shop owner).

>sequenced relay contacts... on the same frame. Don't try to blend it into
>a sequenced relay layout. We were talking a single relay frame, not more
>than one relay.

You can accomplish the same thing either way. With two relays (and a diode) it's an unbelievably simple circuit:

http://www.aimcomm.net/sparky/sq_rly.gif

And in case you never noticed, that's a very common circuit, even in modern radios with reed relays. But if you are using open-contact type relays it's much easier and cheaper just to gap a pair of contacts wider than the others on the same relay. Jeez, Skip, I can't believe that you don't know this stuff -- this is like high-school level electronics!

>:>> >Your bent armatures suggestion is bad news.
>:>>
>:>> Such "bad news" that the practice has been used by almost every

>
>: Why are they "bad news", Skippy? And if they are "bad news", why have
>: they been used for decades?
>
>Where... and the bigger question is, why are they not popular now..?
>Simple answer: "really dated technology".

That didn't answer the question -- why are they "bad news"? Because they aren't "popular"? Maybe you should take a closer look at some of these un-"popular" amps from makers like Collins, Henry, Kenwood.... or hey, you could even check your copy of the ARRL handbook! I have the 1978 edition and it shows a couple examples of sequenced relays.

Oh, and speaking of the ARRL handbook, notice that in every single example of HV power supplies where there are semiconductor rectifiers in series they use resistors and caps. On p.113 (1978 ed.) it has an entire section about using diodes in series, under the section on "Protection of Silicon Power Diodes". That section basically states that because diodes do not turn off at the same time (no matter how well matched they are), they are subject to transients that exceed the PRV of the diode. So the ARRL recommends using resistors to divide the reverse voltage equally, and capacitors to protect against unequal switching times. So do you think that the ARRL handbook is wrong?

>Because they are not reliable, nor are they practical, nor are they cheap.

One relay is more reliable AND less expensive than two relays and a diode, don'cha think? And one relay uses less current, takes up less space, and is easier to replace when it fails, so how are they not practical? And if they were used by GE, Motorola, Uniden, and many major manufacturers for many, many years (and are STILL used by other companies despite your unqualified claims to the contrary), why are they "bad news", Skippy? They aren't. So shut your trap and learn something instead of bragging about your ignorance.

>:>In regards to transceivers... rather than the stupid practice of hosing

>
>There is a reason few if any amplifier - radio mfgrs are (might use a)
>using sequential relay(s). You'd better jump from this "Titanic Topic"
>before you go down with the ship.

No, YOU better start paying attention to how these things are actually designed and built! The reason (and I said this before) is because they are being replaced by reed relays in sequential circuits. But not every manufacturer uses reed relays. Some still use open-contact relays, such as the amp that YOU used for an example.

>I guess all the keyed A+ and A- used by companies like Motorola (for
>decades) prefer the harder route. Come on now frankie...

No. After the old tube monsters went extinct, Motorola took a different path and built some radios that put the relay sequencing into the mic switch, which wasn't too popular because the mics weren't interchangeable between radios. But many shops tried anyway, resulting in a lot of bad radios, which is one reason why their radios sucked for a long time. The Mocom line used a single sequenced relay, which was made just before they began using sequenced reed relays (using circuits similar to what I provided in the schematic).

But you should know all this already because you are a radio tech, right?

>: To verify my statements, all you need to do is to find an old radio
>: that uses a T/R relay, take off the cover and look at the gaps. If you
>: don't have an example of your own, email me your address and I'll send
>: you a whole box full of old T/R relays from a wide variety of radios

>: that use gapped contacts. Some of them have bent armatures and some of
>: them have armature spacers, but all of them were built with the same
>: objective -- a sequential relay.
>
>I believe the original subject was an Amplifier... was it not..? The

T/R relays are still used today -- did you forget about that amplifier we were
talking about?

>:>Yeah, cranking on relay armatures is pretty bad news... especially
>:>since many of them are sealed reed relay types. But you knew that
>:>and obviously holding back to see if I'd mention it... yeah right.!
>:>
>:>Hard to crank on a reed relay when its sealed. Yeah baby..!
>
>: Reed relays don't carry RF very well. And they certainly don't carry
>: power because it tends to vaporize the Hg and destroy the relay. They
>: are usually only used for low-voltage DC and audio switching. But you
>: knew that, didn't you Skippy?
>
>I'm laughing at you big time here frankie.. I guess decades of Motorola,
>GE, EF Johnson, Aerotron rf amplifier and radio switching with reed relays
>doesn't prove anything.

By "power" I meant kilowatts, but I'll let you gloat for a while anyway because
I should have stated myself more clearly.

> I guess its time I went and threw out the large
>box of reed T/R relays I have from salvaged high power Motorola Micor
>Radio Equipment.

Oh, hey, remember your question above? "The last radio with a t/r relay was made
...? .... years ago..? ... decades ago..?" I think you answered your own
question, Skippy.

> I got some nice/neat pictures of their very common
>yellow RF switching (reed) relay I could send if you'd like to view them
>while eating your crow.

It's more fun to see how differently you react when you know for a fact that you
are right, as opposed to 99% of the time when you are shoveling technical voodoo
based on your misunderstanding of the fundamentals and your lack of education
and experience, or plagiarizing some ham that shares your ignorance. It's almost
like you jump out of your seat and lapse into convulsions when you can finally
nail me on something! I should put out some intentional misinformation just to
jerk your chain once in a while!

>:>> >> And the real issue with the relay in that amp is the fact that there

...uh huh. That's why we are having this conversation, right?

>Hopefully Brian did not go for your dated relay information. Arcing /
>bending relay contacts for use in RF amplifiers is bad news.

Even though it's a method that has been used successfully for almost a century, and still used even today, why is it "bad news", Skippy? Why can't you answer that simple little question?

> Wasn't
>even great back in the 50's, 60's and 70's. Bad habits die hard... you
>prove that quite a bit in your posts.

I guess fire, gears, metallurgy, and the wheel are some of those 'bad habits' that use "dated technology", huh? Of course let's not forget that the internal combustion engine and the airplane have been around for a century, so they must also be "dated technology", right? But wait.... radio is over a century old, too... by golly, even RADIO is "dated technology"! So why the hell are you using it, Skippy?

1781. PEP vs RMS vs ERP

Newsgroup: rec.radio.cb
Date: 2003-07-29 11:13:15 UTC
From: Mad Dog <lgsast@strato.net>
Message-ID: <bg5l0f$kv1ci$1@ID-71746.news.uni-berlin.de>
Source record: 163315
Cross-posted to: misc.transport.trucking,rec.radio.cb

Most Transmitters and Amplifiers are rated using the PEP (peak envelope
power) measurement,
however a more accurate measurement would be found by using
the RMS (root mean square).
ERP or (effective radiated power) is found by multiplying the PEP x
the Gain or (power multiplication factor) of a particular antenna.
PEP=RMSx1.414
RMS=PEPx.707

Well then, you should know that 5 WPM isn't that difficult to learn... And I
TOO have a 20 WPM Extra. I have NO problem with the FCC keeping the 5 WPM
code element.

I've seen some situations in my life time where code was able to be used
aside from radio. Not a bad idea to keep it in tact at LEAST at 5 WPM.

JMS

You have posted this in lots of places, so I will reply only once. The
international requirement is that code testing is optional, hence it can
be met either with or without passing a code test, i.e. veryone meets it
all the time.

http://www.geocities.com/scottyblowzweener/Scottie_fagboy.html

http://www.geocities.com/scottyblowzweener/Sissy_Scottie_pix.html

AND HERE IS A GAY SCOTTIEKINS SONG! HE WROTE IT HIMSELF!!!

<With apologies to Dennis Wilson>

Since he turned age twelve he's been out givin' truckers head

He comes in late at night and gets his pooper popped in the bed

Scotty loves what's between dudes' thighs

And he's blown an awful lot of guys

So blow 'em Scotty, blow that throbbin' drippin' dick!

Blow 'em Scotty, Blow, blow 'em Scotty

Blow 'em Scotty, Blow, blow 'em Scotty

Blow 'em Scotty, blow that throbbin' drippin' dick!

He was gonna be train's fag and she was gonna be his man

But he let another keyqueen pop a nut in his fag ass can

Scotty is a punk ass slime

And it never takes him much time

To blow 'em Scotty, blow that throbbin' drippin' dick!

Blow 'em Scotty, Blow, blow 'em Scotty

Blow 'em Scotty, Blow, blow 'em Scotty

Blow 'em Scotty, blow that throbbin' drippin' dick!

<cheesy hi octave guitar outro>

My bigget problem was missing a letter, and getting hung up on it. By
then 3 or 4 more letters would go by, and then the real frustration
would set in. It ended up that I needed to just relax and let the
mistakes roll by. Then the mistakes went away.

Let's hope people remember that little statement from the study guides about keeping that certificate to prove that they've earned the credit. I'm sure that some will not unfortunately.

You are correct, sir.

The exam administered by the various VEC's is called Farnsworth. If
you look at Part 97, you will see that it specifies Morse. Farnsworth
is mentioned nowhere in Part 97. Furthermore, the specification of
Morse Code is defined nowhere in Part 97, nor in all of Title 47. We
on RRAP have been down this road before.

Basically, if you are a Pro-Code Test Agenda type, you agree to allow
the VEC's to break the law, even encourage it because the examinee may
eventually want to actually use Code at a higher speed.

But if you can read, you see that Morse is specified, not Farnsworth.

If you happen to know enough about all this to ask for the real Morse
Exam at a test session, then the VE must accomodate you. But the
aren't likely to mention it unless you do. If you've been studying
the Morse training tapes, you are likely to fail the Farnsworth exam.

Farnsworth is fairly well agreed to be the better METHOD to learning
faster code. By the time one gets to about 20WPM, there is supposed
to be no difference between Farnsworth and Morse, but with the various
code tutor programs, anything is possible.

Anyway, the VEC's are administering a code exam not specified in Part
97.

Hopefully it will all be over with soon.

Good luck, Brian

> different test place with different folks instead.
>
> Dan/W4NTI

Dan, he probably finished failing the exam again and said to one of
the VE's, "Sheesh, that code seemed awfully fast." Whereas the VE
replied, "Sure, we're sending it at 13-18wpm with long spaces in
between. It all evens out in the end. By the way, we are denying you
access to HF."

That's what happens to people who study Morse Code tapes at 5wpm then
take the Farnsworth exam.

If they don't have a high level understanding of all of this, then
they are just as likely to get a hold of real Morse study material as
opposed to Farnsworth study material.

> --
> 714 Sandpile,
> The Mad Dog wavin' good bye
>

The formula is:
y=b(subscript 0) times b (subscript 1)^(dB gain of antenna)
Restated:
Effective Radiated Power= Radio output power X constant^dB gain of antenna)
The constant is equal to 1.25992105. Finding the constant which is the base
of the exponent was the more complex task.

Example: Your radio puts out 4 watts and you are wanting to buy an antenna
with a 6 dB gain rating.
Effective Radiated Power= (4)(1.25992105)^6 = 16 watts.
If you were to buy an antenna with a 9 dB gain rating, then the effective
radiated watts would be:
Effective Radiated Power= (4)(1.25992105)^9 = 32 watts.

From http://home.inu.net/davidstua/radio.html

ERP in a nutshell: Transmitter power * feedline loss * antenna gain.
Every foot of coax has some loss. This must be calcucated into the picture
in order to obtain the true output power at the antenna.
If a length of line has 3db loss and your antenna gain is rated at 3db, you
have negated the gain of the antenna.
IOW 3-3=0.

In order to determine the actual line loss constant, there is another
formula which takes into account, the diameter of the inner conductor, which
material is used, the distance between the inner conductor and the shield,
and even the makeup of the dialectric, including thickness, surrounding the
inner conductor.
It's best to simply consult the manufacturer of the cable for the constant
to make the proper calculations with.

If you're going to be discussing radios at least get your facts right.
Handing out derived bullshit from self proclaimed experts in truckstops will do no good.

For example, it is a pure urban myth that you MUST have your coax cut in 3 feet lengths.
For a single antenna, length of a coax has no meaning.
Unless you're going to run the cable several hundred feet or more.

For a properly cophased system, two antennas, you MUST have the lines at equal length.
But still, it makes no difference if that length is divisbile by 3 or not.

Where did the 3 feet thing come from?
Some kind soul somewhere this comes from the fact that 3 feet is a precise division of the wavelength of the CB band.
Bullshit.
Take a look in any CB sales store. Precut cable comes in 3,6,9, and 12 foot lengths.
That's where the myth comes from.

A 50 ohm cable will be 50 ohm end to end regardless of length.

Could we welcome
them to Channel 19 instead, OR would it give them MORE stress ? !

_
You listen to that sh!t? I can't stand the cussing, overmodulated
scratchy audio or the echo for more then about 5 minutes.
I stay on sideband. I won't have to worry about hearing you there, all
the sideband radios were made in a communist country!!!

_
Channel 19 is invaluable when driving the big interstate roads for many
reasons..I can't begin to count the number of times I was able to bypass
huge traffic jams by finding alternate routes. By the time one realizes
there is an accident and traffic jam ahead, it could be way too late to
exit and search for alternate routes and much time can be lost sitting
in traffic jams. The drivers know where the smokeys are, the best
coffee, food, cheap places to crash, gas prices and the best place to
get gas. Toss in the deals some of the drivers offer over the radio
(Brand New Palomar Blue Face 225s for 65 bucks, Down King Size
Comforters for 40 bucks, and all kinds of goods and gadgets) and channel
19 is a far cry from being "sh*it" as it fills many voids. One man
gathers what another man spills. Betcha 19 is around long after the
hammie bands are confiscated.

PEP = RMS x 1.414 ?????

RMS = PEP x .707 ?????

I'm sorry but no such power statements are true.
PEP does not have the peak voltage relationship
ratios that your formulas suggest.

More accurately...................

RMS voltage = Peak voltage x .707

Peak voltage = RMS voltage x 1.414

If they don't pay any more attention than you, that is likely. And a part of the learning process that you have always missed.

You must realize the difference on 19 from city, when I am, to country.
Once you get out about 20 miles, 19 is a whole different ballgame.

Here, it is used by the radio rambos, the CB equivalent of trolls.
They all pop out at rush hour and prevent the drivers from passing
information. They even think it's funny. 19 doesn't work here.

In 1971 I passed the written test for a 2nd class FCC radio license.
Do you know what that was? That was the license that gave a person the right
to work on electrical equipment within radio and tv stations.
You did not pass the test by answering simple questions. You also had to
show how you how came to that answer.
I have been fully acquainted with CB radios since 1968.
I have run the full gambit of equipment in my cars. From magnet mounts to
fully cophased 102" stainless whips, with, and without linears.
Including mounting a CB on a motorcyle.

When it comes to radios my dear child, yes I do know what I'm talking about.
Even though what I showed above was copied and pasted, it was to show that
it was NOT my personal knowledge alone, but that of others as well.

But if you want to argue the point with someone who has more knowledge in the area face to face, find yourself a good technician and let them explain it to you.
You'll get an education, for once.

–

I'm hip,,some places it's dea..I'm also aware of the rush hour radio runners....but heck, certain freqs on 2 meter are the same way.
DX is running,,,,heard Southern MD a few minutes ago way down low.....now listening on 38 LSB.

I have experience with twin fiberglass marine mounts on the third level
of a 32 foot cabin crusier and achieving a really low match can present
a tedious challenge, coax lengths notwithstanding.
I like my "portable" Antron better. Much better all-around performance
for talking big radio.

Furthermore sir, your PEP formula is incorrect.
It should be:

(PEV*0.707)squared
PEP = ------------------------------ PEV=Peak envelope voltage.
R

Instead of relying on truckstop gained knowledge, you could at least search
the web first before posting erroneous formulas.

I was repairing, tweaking CB gear back before the best part of you dribbled down
your mommy's leg. I first talked on a CB back when the latest model was a
Heathkit you built yourself that my now 80 yr old dad built himself. It
had one crystal :) And dad put up a tower with a 5 element Mosely
verticle.

My first moble rig had tubes in it since transistor CB radios had emerged
yet. Considering all this and that I've been a ham for going on 14 years
who has built his own J-poles, random wire long wires, and quad beams,
trust me when I say this to you that you -don't- want to get into a
discussion about antennas, feed lines, coax, RF, gains, or anything else

about a transmitter, receiver or related topics.

: Frank Gilliland <sparky@nospamaimcomm.net> wrote:
: No I wasn't. I know what I'm talking about, but you obviously don't. Notice I
: said "last-on-first-off", not "make before break". And BTW, when talking about
: relay and switch contacts, the proper terms are "shorting" and "non-shorting",
: not "make before break" and "make after break" -- just a little tidbit of info
: that will help you sound like a real tech even though you aren't.

What started your rant was my mention of hot switching of the amplifier which was part of the original thread. You said it might have a sequenced, arc'd or what term you'd like to use... relay. I said it does not. In short, as shown the original (pride brand I belive) amplifier probably hot switches RF unless you can prove otherwise. None of the Pride amplifiers I have here use any type of special or sequenced relay for RF switching.

:>Your post just above is nothing special... nor is it news. Possibly
:>an attempt to change the subject to power supply squence relays from TR
:>switching..?

: You say that you have lots of experience with tube amps. If so, you should know
: exactly what I am talking about. But you don't. You don't have anywhere' s near
: the experience with tube amps that you claim, or else you would know that when
: you apply screen voltage without plate voltage in one of these big power tubes
: you start melting grids! And you should also know that if you don't hold the
: load on your output tank until -after- the final powers down then you are going
: to blow your receiver's front end. Sequential relays are an essential part of
: any power transmitter, whether it's tube or solid-state.

I only claim to prefer half and half in my coffee, not much more frankie.

If I or others don't give you tube amp 101 complete, you start claiming we don't know something because it wasn't previously mentioned. Now where did I or anyone claim anything specific about screen anode voltage sequencing..? I mentioned an common homebrew (amateur) practice about deriving screens from the HV supply, no magic there.

If you stay with one example amplifier circuit, then it's much easier to get into specifics... I'm not even sure where you'r "pulling your load on the output tank until after it powers down" statement from. What do you consider "powers down" frankie..? Sequential RF relays are not an essential part of any tube or solid state power transmitter... your going to up the power level of the topic amplifier to some broadcast transmitter now..?

If you'd stay on topic (like the original small rf amplifier for example), fine. If you want to jump from amps to transmitters at various

power levels... clearly say so. I have transmitters delivering power which have no relays at all. Everything is electronic switching... just depends on the power level of which you reference. But goodness you like to dance around.

If you jump to larger broadcast transmitters... they are often loaded with relays and permissive controls, but for the most part, there are no special sequenced TR relays switching RF in the output power section. Per the original thread that you took off dancing your tune... there is no hot switching of rf in a typical broadcast transmitter.

:>Nice song and dance... but again IT'S NOT USED IN ANY CURRENT AMATEUR
:>OR COMMERCIAL AMPLIFIER CIRCUIT, nor was it common in past commercial or
:>amateur amplifiers.

: Single sequential relays were most certainly common in commercial
: equipment and some amateur equipment of the past, and are still used in
: some current stuff.
: Like I said, I have a box full of such relays. I'll send you some if
: you want, but you pay postage.

As stated before, I'd settle on the name of any current Amateur or Commercial Amplifier which uses Sequential relays to switch RF...? I'd even offer up that you could also provide the name of any broadcast or amateur transmitter which uses your special sequential relays to switch RF..?

That was the original topic of your follow up post to my comments on the mentioned amplifier... Sequential relays for RF t/r switching.

:>:>Other than you gassy cloud sequence story, can you provide any
:>:>modern rf amplifier circuit using a sequence relay...
:>
:>: I'm willing to bet that the amplifier in question does.
:>
:>It doesn't...

: Did you design it? Do you have one handy and mic'ed the contacts? Or are you
: just psychic? But you may be right, since that amp isn't exactly the best
: example of RF engineering anyway.

I've had about one of most every type amplifier made through the last few decades... and yes, I've had and still have a few Pride amplifiers in my collection. For the most part, they use generic relays. Some of their amplifier circuits are pretty nice, most of their mobile amplifiers are crap. Every amplifier they've produced had/has shortfalls in the designs... but so has most every brand of amplifier made. If you want to use one, you buy it and improve it as best possible and practical.

:>: You probably won't see such a notation in any owner's or service
:>: manuals since these relays are typically ordered from the manufacturer
:>: with the specified gap (or 'contact delay' -- same thing). All you get
:>: from a service manual is the replacement part number. Replacing one of

:>: these with a general-purpose relay -without- checking the contact gaps
:>: on the original can lead to some serious trouble (and I learned THAT
:>: one from experience).
:>
:>Brand and model of said lesson device...?

: Believe it or not, I actually remember the model even though it was almost 25
: years ago -- it was a 2-channel Motorola T51GGV. I remember it well because the
: first time it came into the shop it needed a new T/R relay, which I replaced
: without knowing about the contact gapping requirements. But that darn radio came
: back to the shop several times afterwards because it kept blowing the final (a
: single 6146). That's when I got the lesson (scolding) about contact gaps from
: Stan (the shop owner).

Your talking an old Motrac era tube radio, originally designed from the
60's. You are not talking about any amateur or commercial amplifier
produced on a large scale. ... or for the most part, even a relative small
scale production for the consumer.

The replacement for your mentioned 60's designed radio is/was a radio with
delay A+ and A- controls and a reed relay switching 100 watts plus of RF.
Commonly called a Micor... or the Mocom 70 depend on your pocket book and
how deep you let Motorola into it.

Stay in the 60's if you like... amplifier mfgrs have long since moved on
to more practical circuit which left sequential rf tr relays by the
wayside.

:>Nice try at a side step dance... I was talking about your oh so popular
:>sequenced relay contacts... on the same frame. Don't try to blend it into
:>a sequenced relay layout. We were talking a single relay frame, not more
:>than one relay.

: You can accomplish the same thing either way. With two relays (and a diode) it's
: an unbelievably simple circuit:

: http://www.aimcomm.net/sparky/sq_rly.gif
: And in case you never noticed, that's a very common circuit, even in modern
: radios with reed relays. But if you are using open-contact type relays it's much
: easier and cheaper just to gap a pair of contacts wider than the others on the
: same relay. Jeez, Skip, I can't believe that you don't know this stuff -- this
: is like high-school level electronics!

Jeez frankie, in case you hadn't noticed... much of current amateur
amplifier technology uses fast relays and electronic bias which don't
require sequenced t/r relays. A typical reed or vacuum relay is faster
than the typical driving radio/exciter. I can't believe you don't know
this stuff... :-)

[snipage of frankies previous dance and sing, topic avoidance...)

: That didn't answer the question -- why are they "bad news"? Because they aren't
: "popular"? Maybe you should take a closer look at some of these un-"popular"

: amps from makers like Collins, Henry, Kenwood.... or hey, you could even check
: your copy of the ARRL handbook! I have the 1978 edition and it shows a couple
: examples of sequenced relays.

Notice the Decade... 1978 We've come a long way from 1978. Let me
repeat the question; are there any current Amplifier mfgrs using
Sequential Relays to switch RF..?

As a sidebar notation: The collins 30-L1, 30-S1, Henry Series and the ill
fated Kenwood TL-series of hf amplifiers did not use sequential relays for
RF switching. Many or most of the above hot switch rf, which is not good
news. That's where this all started...

: Oh, and speaking of the ARRL handbook, notice that in every single example of HV
: power supplies where there are semiconductor rectifiers in series they use
: resistors and caps. On p.113 (1978 ed.) it has an entire section about using
: diodes in series, under the section on "Protection of Silicon Power Diodes".
: That section basically states that because diodes do not turn off at the same
: time (no matter how well matched they are), they are subject to transients that
: exceed the PRV of the diode. So the ARRL recommends using resistors to divide
: the reverse voltage equally, and capacitors to protect against unequal switching
: times. So do you think that the ARRL handbook is wrong?

No, I think that material writen in 1978 was probably pretty good in
1978, not always the best in 2003... some 25 years later. Things
change... big time.

:>Because they are not reliable, nor are they practical, nor are they cheap.

: One relay is more reliable AND less expensive than two relays and a diode,
: don'cha think? And one relay uses less current, takes up less space, and is
: easier to replace when it fails, so how are they not practical? And if they were
: used by GE, Motorola, Uniden, and many major manufacturers for many, many years
: (and are STILL used by other companies despite your unqualified claims to the
: contrary), why are they "bad news", Skippy? They aren't. So shut your trap and
: learn something instead of bragging about your ignorance.

My original statement was about hot switching rf through the example
amplifier, your attempts to divert to some other dual relay example are
bogus.

Special sequential RF or your magic modified arc'd open frame type relays
are old technology and not used in modern equipment. By nature, they are
expensive and unreliable when compared to electronic switching (pin
diode) reed or vacuum relays used in most current Amateur Amplifiers.
Simple enough...

I'm sure we'll be waiting some time for your example of special
model sequential tr (for switching rf) relays used in any modern radio
equipment. Those mechnical relays your standing behind are long gone from
the big picture.
The clock ticks louder and louder...

"Your trap" seems to be shut on any current example..? what's up with
that frankie..?

Onward...
The number of relays required to complete the TR function is another
whole topic. I do not care to bring in your latest off topic
number of relay diversion as it was never part of the original thread.
Stay on track frankie.

:>There is a reason few if any amplifier - radio mfgrs are (might use a)
:>using sequential relay(s). You'd better jump from this "Titanic Topic"
:>before you go down with the ship.

: No, YOU better start paying attention to how these things are actually designed
: and built! The reason (and I said this before) is because they are being
: replaced by reed relays in sequential circuits. But not every manufacturer uses
: reed relays. Some still use open-contact relays, such as the amp that YOU used
: for an example.

The original amplifier circuit which started all this, is still hot
switching RF. Your original followup to my mention of said suggested the
amplifier might have had a sequential relay (or similar function) TR
switching RF. I claim is does not and I stand by it until you prove
otherwise.

By the way Mr Technology... since you're paying attention of course..

A typical "properly designed" amateur amplifier with reed relay switching
probably doesn't have to have a sequential relay circuit, the reed relay
is often faster than any typical Amateur Radio driving said amplifier.

:>I guess all the keyed A+ and A- used by companies like Motorola (for
:>decades) prefer the harder route. Come on now frankie...

: No. After the old tube monsters went extinct, Motorola took a different path and
: built some radios that put the relay sequencing into the mic switch, which
: wasn't too popular because the mics weren't interchangeable between radios. But
: many shops tried anyway, resulting in a lot of bad radios, which is one reason
: why their radios sucked for a long time. The Mocom line used a single sequenced
: relay, which was made just before they began using sequenced reed relays (using
: circuits similar to what I provided in the schematic).

Motorola produced high powered tube amplifiers through the 80's and into
the 90's.

These magic radios you claim Motorola produced with sequential TR - RF
switching... how about a model name...? In the commercial world, they
were not long term reliable, they were expensive and they fell by the
wayside when the technology moved on... some 25 or more years ago..?

: But you should know all this already because you are a radio tech, right?

Yeah, just by luck I worked for a Motorola Service Station for "a few
years", it also happens to be one of the largest in the Nation... still.

So after you abandon your Sequential relay statements and try to merge
your current foot in mouth position into some type of sequential reed
relay circuit... how about you get back on track. As in current
amplifier or radio technology... some 20 to 25 year later.

:>I believe the original subject was an Amplifier... was it not..? The
:>last radio with a t/r relay was made ...? .... years ago..? ... decades
:>ago..?

: T/R relays are still used today -- did you forget about that amplifier we were
: talking about?

Was a pride right..? if it was made as shown in the original diagram, it
still hot switches RF as I first mentioned. You claim it doesn't and you
are wrong. Nothing has changed...

:>: Reed relays don't carry RF very well. And they certainly don't carry
:>: power because it tends to vaporize the Hg and destroy the relay. They
:>: are usually only used for low-voltage DC and audio switching. But you
:>: knew that, didn't you Skippy?
:>
:>I'm laughing at you big time here frankie.. I guess decades of Motorola,
:>GE, EF Johnson, Aerotron rf amplifier and radio switching with reed relays
:>doesn't prove anything.

: By "power" I meant kilowatts, but I'll let you gloat for a while anyway because
: I should have stated myself more clearly.

The original amplifier was not at the kilowatt level.... but just for the
sake of others reading this. The typical multi kilowatt level amateur
amplifier uses reed relay switching on the input and vacuum relay
switching on the output. In some cases, vacuum relays are used on both the
input and the output. They handle the RF well and they are very fast...
fast enough that the driving radio is most often not subject to rf hot
switching.

:> I guess its time I went and threw out the large
:>box of reed T/R relays I have from salvaged high power Motorola Micor
:>Radio Equipment.

: Oh, hey, remember your question above? "The last radio with a t/r relay was made
: ...? .... years ago..? ... decades ago..?" I think you answered your own
: question, Skippy.

Actually...
I was hoping you'd comment on your statement that "reed relays don't carry
RF well..." but you avoided it big time.

:> I got some nice/neat pictures of their very common
:>yellow RF switching (reed) relay I could send if you'd like to view them
:>while eating your crow.

: It's more fun to see how differently you react when you know for a fact
: that you are right, as opposed to 99% of the time when you are
: shoveling technical voodoo based on your misunderstanding of the

: fundamentals and your lack of education
: and experience, or plagiarizing some ham that shares your ignorance. It's almost
: like you jump out of your seat and lapse into convulsions when you can finally
: nail me on something! I should put out some intentional misinformation just to
: jerk your chain once in a while!

I feel humbled knowing your opinion frankie... but you are still wrong
about the hot switching comments you made.

If you weren't so bitter and mean, people might like you better... even
with your ego as bad as it is.

:>I appreciate your concern frankie, but you have me confused with someone
:>who really cares about what you post.

: ...uh huh. That's why we are having this conversation, right?

Mostly to get the proper facts out... people make mistakes, both you and
I. I call you on some of yours, you call me on some of mine. If you
weren't so bitter about it, it might be a lot more fun. You wouldn't get
that knot in your stomach and have your blood pressure jump up when you
see that I've posted a follow up.

:>Hopefully Brian did not go for your dated relay information. Arcing /
:>bending relay contacts for use in RF amplifiers is bad news.

: Even though it's a method that has been used successfully for almost a century,
: and still used even today, why is it "bad news", Skippy? Why can't you answer
: that simple little question?

Simple enough...
Compared to the alternatives like pin diode, reed and vacuum relay, it's
very unreliable. It's also more expensive than some of the circuits which
replaced it.

Now your turn frankie.... who's bending relay contacts these days and
where can we find it done..?

:> Wasn't
:>even great back in the 50's, 60's and 70's. Bad habits die hard... you
:>prove that quite a bit in your posts.

: I guess fire, gears, metallurgy, and the wheel are some of those 'bad habits'
: that use "dated technology", huh? Of course let's not forget that the internal
: combustion engine and the airplane have been around for a century, so they must
: also be "dated technology", right? But wait.... radio is over a century old,
: too... by golly, even RADIO is "dated technology"! So why the hell are you using
: it, Skippy?

Simple, its fun and pays good money.

Frankie... plasma is now common, gears are now complex, metallurgy now
produces exotic blends and alloys and the wheel spins over hundreds of
thousands of rpm in turbine units. Let's not forget you daddy's Oldsmobile

looks nothing like a common auto and cloth covered airplanes are not common place in commercial aircraft mfgr.

Time for you to simply enjoy your crow sandwich and move on... it's 2003

It's been fun for the most part.

"73's and good luck in the contest"

>Don't know if anyone has considered this, but if the BPL lines are going to
>radiate intereference, would it not stand to reason that the lines would be
>(not by choice) accepting outside RFI sources???

Correct... and there have been some very pithy statements concerning
this issue submitted to the FCC.

A few I've seen (from the ARRL and others):

- The FCC recently turned down the request for an amateur very-low-
frequency band, on the basis of concerns voiced by the power
companies. The power companies asserted that their existing
power-line-control equipment (which uses VLF signals on the lines)
would not be able to tolerate even the level of EMI induced by an
amateur transmitter running just a few watts of power, on
frequencies where neither the amateur antennas or the power lines
are likely to be acting as efficient radiators/acceptors.

Now, BPL is being proposed... and its proponents are asserting (or
assuming) that BPL can operate effectively even in the presence of
much higher HF interference levels, generated by amateur
transmitters running at legal-maximum power, on frequencies where
the antennas and power lines will be much more efficient.

As the ARRL comment put it, "You can't have it both ways."

- Voltage levels induced by amateur-radio and other licensed
transmitters will likely be high enough to saturate the RF front
end circuitry, and the digitzers, used in BPL modems built to
typical consumer-electronics standards. This could very easily
result in loss of BPL connectivity over a fairly significant area
around each licensed transmitter station, whenever the transmitter
keyed up.

- Getting the BPL signals through, or around, the existing low-pass
filtration created by powerline transformers will require
installing high-pass bypass circuitry. This circuitry will
necessarily couple RF noise on the lines just as efficiently as BPL
signals, and will allow RF noise (e.g. triac switching noise, motor
commutator noise, etc.) to travel on the lines quite a bit further
than it does today.

Not being a medical expert...but...it sounds to me like a happening when one is trying to bust through a certain word per minute barrier. Where you must learn to copy BEHIND.

Try this. Listen at a rate of sending that you ARE NOT COMFORTABLE with. In this case TEN or 13 WPM.

ONLY RIGHT DOWN a character that you copy. Forget about ALL the others. Keep doing this. Do not drop down to the 5 wpm at all. Forget that is the goal.

As time goes on you will start getting more and more of the characters. This technique forces the brain to copy BEHIND. This should allow you that split second of time needed.

It works for getting the speed up.

Like I said, it may be what will help you.

Just a thought.

Dan/W4NTI

I like that..sounds plausable. Oh....when I was learning it and I was
riding in the car with mom I would sound out the Morse on all the roadsigns
I could see. Drove mom nuts, but it helped. Not dot dash.....di dah.

The CSCEs are held by the VECs. They do not go to the FCC - and therefore, the FCC itself doesn't know.

DICK, I pay attention to what the FCC has published in Part 97. It
tends to be the guide book of amateur radio. Your petty little jabs,

half-baked thoughts and incomplete sentences don't rule the ARS. They merely distract and annoy.

This is interesting. I had a couple of Heathkits (amateur transmitters) back in the early 60s. The DX-20, DX-35, and DX-40 all took a crystal. I don't recall Heathkit ever having CB kits. Back then, you had to have a 1st or 2nd class radiotelephone license to even repair them, let alone assemble them. I know; I had my 1st class radiotelephone license, commercial radiotelegraph ticket, and radar endorsement by 1966.

Am I missing something?

Best regards from Rochester, NY
Jim

Richard,

I hate to bust your bubble. 2nd class could operate an AM or FM station subject to power limitations and not if it was directional. The 1st class was required for the high power stuff and for television. I had my 1st phone and 2nd telegraph plus radar in 1966. In fact, at the am-fm-tv station I worked at (WROC, Rochester, NY) I had inadvertently been assigned to radio after it went directional at sunset. I found out when I arrived at the station that afternoon. Much to the chief engineer's relieve, I pulled out the 1st class license which I had received in the mail earlier in the day :)

Best regards from Rochester, NY
Jim (former P1-20-8429) (T2-20-594 - I think)

> GEEEEESSSSHHHH!!

Wrong with respect to the General, Advanced, and Extra license classes. Their ability to operate on HF is dictated SOLELY by license class, and for these classes, 47 CFR 97.501 indicates the credits (including element 1). These classes have NO REFERENCE to any international requirement as necessary to be met.

You need to re-read the operating frequency privilege rules in 47 CFR 97.301.

That means that there is no international requirement (in your words, "has been dropped").

I agree exactly: "Until the FCC changes the rules, it is still required ...."

How do you show compliance with a non-existent requirement?
Please demonstrate your proof.

> you can do will stop that.

1) I am not a troll, nor have I ever posted from easynews.com. I don't even have an account at easynews.com.

2) I have asked a legitimate question. 47 CFR 97.301(e) bases the HF operating privileges for the novice and technician license classes on a requirement that now no longer exists, but the FCC hasn't removed the requirement for those licensees to comply with the external requirement. How are these licensees to show compliance with a[n international] requirement that no longer exists?

If they can't demonstrate compliance, then they don't have the privilege. Is that beyond your comprehension?

> These are the handles you have used in the past couple of months

This top one is NOT a handle but my name. So what if it's an "ampr.org" address. It's one of the few that actually WORKS because I know what I'm doing.

None of the rest are mine nor under my control. Most I've never even seen before.

Please define "optional requirement."
```

If it's optional, it's not a requirement. If it's required, it's not an option.

47 CFR 97.301(e) is defined in terms of a requirement. That requirement, having been turned into an option, no longer exists - but the appropriate licenseholders, in order to execute the privilege, still must demonstrate compliance with the non-existent requirement. How do they do this? If they can't, then they don't have the privilege. I say that demonstrating compliance with a non-existent requirement is an impossible act.

Hmmm .... what ever wattage with no modulation requires an ac (audio) signal with a peak voltage sufficient to exactly cancel the DC voltage on negative peaks. That implies twice the supply voltage on positive peaks. Now power happens to equal voltage *squared* divided by resistance. The resistance is the same, the voltage is doubled, and the power goes up to a peak of 4 times the unmodulated carrier. Now, exactly what do you think four times two hundred equals? Now who needs to get their facts straight?

I am well aware of what you're saying, I did not feel it necessary to
include all the damned details.
But the ticket allowed you to work in those stations outside of being a DJ.
Even if it did mean under a 1st class ticket supervision.

An amateur radio operator with a tech license or above can build certain
types of radio equipment.
But for CB radio equipment, you definitely needed a commercial license to
work on them.
I believe Heathkit did offer a CB kit at one time but it was quickly pulled
off the market.
More than likely the FCC told them to check the regs before offering such
equipment again.

One of the guys in my senior high school electronics class only came to
school once a week to take tests.
He already had a full time job as an assistant chief engineer with WEBN
radio in cincinnati.
Graduated to chief engineer, and last time I saw him, he was in the
engineering staff of WKRC tv in cincinnati.

Now I understand. Yes, a 3rd class ticket (with broadcast endorsement - I believe they disappeared in 1978) allowed you to work the board - but someone else would have to be on transmitter watch. At channel 13 (WOKR, also in Rochester), if you were hired into the engineering group, you had 6 months to pass your 2nd class ticket and another 6 months to pass your 1st - or you were out.

Richard has apparently set the record straight. He states that they did, indeed, offer cb kits, but they were quickly pulled off the market. Likely they hadn't checked the rules. Obviously, you would have to tune the radio (get on center of the channel - they were individual crystals back when - tune rf and if) and that *did* require a 1st or 2nd class radiotelephone license back then. That was why I posed the question.

My opinion would not be much better than the local weatherman's forecast - and that is less than 50% :) I'd guess a couple of years. Maybe more, unlikely much less. Again, just a guess. It is too bad some folks are so anti-no code. Good safety (rf, ac, and proper grounding) along with reasonable practical exams (where you can operate and power/mode limitations) should be sufficient for the general ticket (in my opinion; others may well disagree). The extra is probably about right as it currently is; more questions, perhaps, on different modes. Modulation techniques, whatever - but I'm straying from the question (which is to say I haven't the foggiest - I'm guessing two years would be a minimum unless the ARRL were to petition the FCC and, although they are a good organization, they also are realistic politicians; meaning they don't want to rock the boat too much too quickly :)

That was in the good old days when there was people that knew something. Now its all automated with equipment that hardly breaks down, but the new group has no idea on what to do if there was a real need for knowledge, its just pull a board and send it in to the manufacture or replace it . Even in the two way field it required a 2 class, and now its send it to kenwood for a kenwood radio. Radio repairman are hard to find also. That involves board level repairalong with understanding on why to change a part, not just guessing.
NOTE I said repairman, not chopshops.

Anyone using this 5/8 wave type antenna? It used to be called the
Shakespeare 1600 . I heard that the composites and the
manufacturing on it
are better than the A99 and the IMax 2000. Can you offer any advice
on this antenna? I would like to buy it for my cb base station.

Thanks

Let's put it this way, the FCC told heathkit to shelve the sales ok?
Since you're claiming to own a pair, how about posting a photo of them?
I'm sure a lot of people would like to see these urban legends.

Also. They're ain't no claiming about it. I am a Christian. Have been for 23 years. I haven't always acted like it, in fact, I was backslidden for about 6 years.

Maturity has taught me, that it's better not to stoop to the level of the this person.

So, I will do the most mature thing...

I will answer this guys "Slander" with the Word of God.

This is from the book of Proverbs...

Proverbs 10:18 (Amplified Bible)

"He who hides hatred is of lying lips, and he who utters slander is a [self-confident] fool. "

Nuff Said.

and remember Christian's aren't perfect just forgiven.....

Back to Listening Mode....

That's a bad idea, an hour straight is 'way too long for learning
purposes.

> In the old days, that would mean going to a code
> practice course, or buying one of those records (I had one to
> start, and I think it did help), or listening to a receiver
> where the code might not be optimal or under the best conditions.

When I studied for my earliest tests there were no consumer-level
recording methods let alone computers. My only options for practicing
Morse were having somebody hand-send it or copying it off the air.
Which, as a practical matter, meant copying it with a rcvr or forget
it. I'm still a very strong supporter of learning Morse via the W1AW
code practice sessions. Today they transmit computer-generated code
and back then I believe they used tape-generated code so it has always
been quite precise. I'll concede that I'm only around 150 miles from
the station so they boom here on 80M and QRM wasn't/isn't a problem.
Might be more difficult from the west coasts but I don't know.

I still recommend W1AW over any of the "canned" aids. Two downsides of
course are that W1AW does not send Farnsworth and one needs a
half-decent HF rcvr.

Wrong again, Doc. RF amps are rated in PEP so the user can operate them within their specifications according to whatever mode he/she desires. For example, if the user has a 100 watt amp and they want to run AM (only God knows why), they would be limited to a 25 watt carrier. Or if they wanted to run SSB then they are limited to the full 100 watts PEP. And if they want to run SSB-RC, DSB-SC, DSB-RC, FM, PM, etc, then they can calculate just how hard they can drive the input, just as long as they know the PEP output rating. Unfortunately, most illegal CBers think that a 100 PEP amp can run AM with a 100 watt carrier. Ignorance is bliss (or so they say).

Source record: 163466

http://www.geocities.com/scottyblowzweener/Scottie_fagboy.html

http://www.geocities.com/scottyblowzweener/Sissy_Scottie_pix.html

Faggot boy Chukkee Sukkee told this story a while back...it merits a reprinting !

MY BIO!!!!!
K8CPA
Okay, this is the place where I tell you how I came to know how fucked up I am.... and all the personal information about me. I will try and answer all the questions:

Date of Birth: June 28, 1972 <in the fall of 71 my daddy fucked a pig, ya see>

Place of Birth: Detroit, Michigan <in an alley behind the unit block of Waterman Avenue>

Religious Information: Well, first off, I am NOT heterosexual! I am a faggot! I accepted penises as my personal Lord in 1980. I was all of 10 Years old, I knew exactly what I was doing, I knew that if I didn't get cock in my mouth, I would not See the Lord in the rapture of it's jizz pulsing. I have been butt pumped nightly for 12 Years. Although, I was "Backslidden" for about 6 of those years, while screwing female barnyard animals. I am now back serving my Lord penis. I would like to Thank the Rev. Jack Hizhogoff of Detroit Gayboy Outreach (Web at: http://www.dgo.fag) for standing in the gap and slapping his manly dick up my fat faggot ass, and for a playroom where people like me, who were burned by chickenhawks with syphylitic dicks and fellow fags in general, could come and give their hearts back to the Lord penis. My only regret is that Rev Hizhogoff had to start pushing his manly dick in my fat faggot ass to the point where I could not bear to bend over anymore, and I returned to my favorite pastime, cocksucking in the men's room of the Detroit bus station.

"Burned" by the syphylitic cocks in my mouth and asshole?: Yep, Sure was.... I was... like I said before, I was sucking when I was 10, (around 1980), I was originally sucking just anyone, especially born again Christians and other mentally fucked up Baptist types like me. I loved those guys when theyd tell me to tongue their assholes. Condoms were a BIG no-no.... and I believed it!

Speed ahead 4 years. in 1984, The Baptist Church I went to had a bit of a controversy, The Pastor had resigned because he was caught bobbing on my young fat faggot pee pee, and things there were in a state of chaos, and my mom did not want to suffer having to put up with my faggot punk boy ass at home. She enrolled me into the Detroit

Institute for Hopless Gayboy Fatass Chumps. I started attending and believe me, going to a Full-TILT anal only gayboy school. after attending one with a stated preference for teaching Hopless Gayboy Fatass Chumps to mainly suck dick, was a MAJOR SHOCK to my system! But one thing kept me from leaving the place, was the fact that these people seemed to really love the Lord Penis. and there was this one guy, named Robert Snyder, Who played the drums, like John Bonham, (from Led Zeppelin) and we got along great.... (Not to mention he would let me drink his jizz on the sly. That was HOT! least *I* thought so! Hey! I was 14 years old, and my hormones were at full TILT! So SUE ME!) (By the way, Snyder is now married to MoparHolic and living in Ohio. I'm very happy for him.
Anyhow... After being there for about a year. I started being interested in playing drums for them, as I was a drummer, from a young age... and I wanted to use my talent for the Lord Penis. Well, I eventually got the nerve to ask if I could play for them, and they said sure, as long as I would give em all head before each show! AWESOME!!!... My first time playing for Detroit Institute for Hopeless Gayboy Fatass Chumps was a nightmare! I was scared, I totally forgot how to play because I was violently burping up the sprem I had sucked down before the show.! I was THAT scared! Anyhow... speed ahead to age 19... I was changing as a person, things were changing at Detroit Institute for Hopeless Gayboy Fatass Chumps, as well. and a bit of a disagreement rose up between me and Snyder. I wanted to suck their cocks the night before the show instead of immediately prior to it. They said they needed the rush in order to play better, and I was asked to step down from the music ministry. Needless to say I was crushed. and very upset at Snyder In fact. I didn't think I'd ever be able to forgive him for that... Anyhow... I entered into what I called "My Dark Years" from age 19-26... Drugs, Drinking, eating 7 meals a day of Burger king, Dominos Pizza and Taco Bell in order to make myself an even bigger Hopeless Gayboy Fatass Chump.... and when I found out that Snyder had turned heterosexual, I really went off the deep end... until...

MY MOMENT OF CLARITY

Well, when I was around 26, I was totally burned out on the Dominos Pizza... I was just sick and tired of being sick and tired... I needed cocks rammed up my Hopeless Gayboy Fatass Chump poop chute and I needed it BADLY!!! the people I was upset at were gone from Detroit Institute for Hopeless Gayboy Fatass Chumps. I was not getting any older... and I was ready to stop running from the Lord penis. But I had issues to resolve in my life... How could just Go back to the fags that had only "screwed" me and wouldnt let me suck cocks in the first place? I still felt like I'd been wronged! But I had the Clarity moment of a lifetime... This thought crossed my mind...

"I was a FAGASS PUNKBOY MOTHERFUCKER BEFORE I came to the Detroit Institute for Hopeless Gayboy Fatass Chumps

Why am I allowing something that happened 7 years ago, keep me from serving my God, the Penis?????????

My Return to total Fagassedness!

Well, I was 26 years old... I was wanting to come back full time to Lord Penis. But I wasn't going back to Detroit Institute for Hopeless Gayboy Fatass Chumps (at least not at that time!!!) I had heard about a church called DGW (short for Detroit Gayboy Outreach) and I'd heard in the past that it was a nice place... So..... I wanted to be where the Holy Spirit of the Lord Penis was... and there I was... I came to the church on Ann Arbor Trail... my first experience there was a interesting one, I came in the parking lot... puffing on a 7 year old kid's cock, (in my years of being Backslidden, I picked up a nasty 2 child a day, sucking habit...) I finished my child, and went in, and right away I heard SCREAMING in my ear... "what are you doing here???" "these are the people that Screwed you, but would not let you suck dicks!" act..... and when the song service started, the Holy Spirit of Lord Penis fell, and I became very uncomfortable, to the point when I had to leave! and I did!, I remember a usher, running after me and saying where are you going??? I remember looking back at him and saying... "I can't handle this SHIT I got to get out of here!" and I left.... Well, that week... I sort of prepared myself for service to mens dicks next week, I took my Book, Gay Sex For Dummies to work. (I worked midnights as a Security Guard, so I could walk around the ghetto apartment complex I patrolled and peek in windows at sleeping little boys. and I had lots of time to masturbate...) My mother realized I was fantasizing about kids nuts.... I found myself reading the Word, and Praying for a big hairy chested man to suck off.. by Sunday, I knew I was ready to come back... Went back that Sunday.... they had a Illustrated Sermon on fellatio with pictures from several fag magazines, it was great, and needless to say, my Hard cock, Melted in the presence of the Lord Penis. and I knew that I wanted to come home.

I thank the Lord Penis for his Love, That takes us whacked out people as we are, and makes us his Servants....

Where am I now... : Currently Attending Adult classes at The Detroit Institute for Hopeless Gayboy Fatass Chumps.

HAM RADIO?!?!?!?!?!?!?I BETRAY IT AND WORSHIP ILLIGAL FAGGOT KEYCLOWNS BECAUSE THEY LIKE SUCKING COCK AS MUCH AS I DO!!!!

I was, I guess you could say, Born into the CB FAGGOT Hobby... My Father, was a Dyed in the wool CB FAG... I even had a stint in the CB radio hobby as well... Anyhow, one year (I think I was around 8 Years old...) my parents and I went to have sex with my Grandfather's Sister and her German Shepherd, in Conway, Ark, which is the world capital of CB FAGGOTS. To say the least, was totally impressed with the FAGGOT CB Hobby, because it satisfied my craving to run my faggot mouth constantly AND to suck cocks!!!. and for years I did nothing about it, just sucking dicks constantly and that linear tuning on

those tube type ILLEGAL FAGGOT KEYCLOWN amplifiers was just too hard to learn. Speed Ahead to age 14, a friend of mine, Joseph Hampton (Ham call sign N8ExtremeCockNosher-but ALSO a secret ILLEGAL FAGGOT KEYCLOWN) who lived across the street from me, and also was interested in getting his dick polished as well.. Well, we had some gay sex together... (you see this was when you had to be secretive about your gayness! I was KB8HHZ (hugely horny for zebra!) and Joe was KB8HGL (Hungry Gonad licker!)... I believe me and Joe were originally licensed in 1989....

On April of 2000. The FCC Restructured it's licenses... and I paid a renegade VE 50 bucks and Received my General Class Ticket... I often masturbate while thinking of linears for ILLEGAL FAGGOT KEYCLOWNS. And really think Riley is mean. Maybe if I sucked his dick he would not be after traitor scumbag shithunk fagboys like me.

My Call? Is a Vanity call that I paid for, it is my initials! Because as a Hopeless Gayboy Fatass Chump, I need something like that for my ego.

so there you go!

I hope this answers everything you wanted to know about me!

BLOW 'EM SCOTTY!!!
<With apologies to Dennis Wilson>

Since he turned age twelve he's been out givin' truckers head

He comes in late at night and gets his pooper popped in the bed

Scotty loves what's between dudes' thighs

And he's blown an awful lot of guys

So blow 'em Scotty, blow that throbbin' drippin' dick!

Blow 'em Scotty, Blow, blow 'em Scotty

Blow 'em Scotty, Blow, blow 'em Scotty

Blow 'em Scotty, blow that throbbin' drippin' dick!

He was gonna be train's fag and she was gonna be his man

But he let another keyqueen pop a nut in his fag ass can

Scotty is a punk ass slime

And it never takes him much time

To blow 'em Scotty, blow that throbbin' drippin' dick!

Blow 'em Scotty, Blow, blow 'em Scotty

Blow 'em Scotty, Blow, blow 'em Scotty

Blow 'em Scotty, blow that throbbin' drippin' dick!

Not sure where you got the information that the F.C.C. told Heath to
shelve their CB kits. They sold them from the early 60's through the
late 70's. Guess it just took them 15 years to comply? Heath quit
selling their CB kits (along with T.V. and amateur kits) due to the
influx of cheap import equipment.
I posted a couple of pic's of Heath CB kits for you in:
alt.binaries.pictures.radio
One of the first and last kits they made.

Wrong. It does neither until someone proves otherwise. I really don't care if
the amp uses a sequenced relay or not, since it is designed for illegal use in
the US market anyway.

> None of the Pride
>amplifiers I have here use any type of special or sequenced relay for RF
>switching.

Pride amps suck. Period. They are probably the worst designed piece-of-shit amps
ever pushed onto the ultra-gullible illegal CBer market. But most of them had
one advantage that few CB amplifiers ever had (or ever will have): they used
seperate relays for input and output. And yes, they ARE sequenced! Even the
diminutive Pride 100 had seperate, sequenced relays. And the use of seperate
relays was enough to give them a reputation for stability (never breaking into
oscillation), regardless of the fact that they would splatter up and down the
spectrum like a spark-gap transmitter.

Lame excuse, Skippy. You should pick up a copy of the ARRL handbook. I'm sure Scott can give you the card catalog number if you can't afford a copy at the local used book store.

>If you stay with one example amplifier circuit, then it's much easier to
>get into specifics... I'm not even sure where you'r "pulling your load on

>to up the power level of the topic amplifier to some broadcast
>transmitter now..?

Wrong. You ALWAYS apply plate voltage before screen voltage. It's a given. Just like using ground for the other end of any B+ supply. Or star-grounding each RF stage of an amplifier or receiver. When you read a schematic, some things don't need to be mentioned, and sequential keying is one of them. That's just ONE of the fundamentals you missed in your internet-based education.

>If you'd stay on topic (like the original small rf amplifier for

>to dance around.

Quit whining and stay on topic -- why are sequential relays "bad news"?

>If you jump to larger broadcast transmitters... they are often loaded with
>relays and permissive controls, but for the most part, there are no
>special sequenced TR relays switching RF in the output power section. Per
>the original thread that you took off dancing your tune... there is no
>hot switching of rf in a typical broadcast transmitter.

DUH!!! There is no switching AT ALL in a broadcast transmitter because it's not a transceiver! How dumb do you think CBers are? Oh, that's right, you equated their mentality to Forrest Gump: "Life is box of chocolatte."

>:>Nice song and dance... but again IT'S NOT USED IN ANY CURRENT AMATEUR

>RF..?

I'm not a ham, but you are, and you claim to have a shitload of amps. Why don't you mic a few contacts and post the results? But remember that I have a few myself, and so do many people on this newsgroup -- IOW, don't post bogus data!

>That was the original topic of your follow up post to my comments on
>the mentioned amplifier... Sequential relays for RF t/r switching.

It's been around a lot longer than you have, and even exists in your example of the Micor from Motorola. You want gapped contacts? I offered you a box full of them, but for some reason you have refused.

>:>:>Other than you gassy cloud sequence story, can you provide any

What's your point? That you can't afford anything but Pride amps? Hey, I'll believe THAT! What I WON'T believe is that you designed and/or built any big amps (tube or ss) that worked! I think you have a few cheap amps that you value ONLY because you can't afford anything else!

>:>: You probably won't see such a notation in any owner's or service

>Your talking an old Motrac era tube radio, originally designed from the
>60's. You are not talking about any amateur or commercial amplifier
>produced on a large scale. ... or for the most part, even a relative small
>scale production for the consumer.

Your lack of experience is showing yet again. Those old radios used the circuits most hacked by amateurs for both homebrew AND manufactured amps. Are you so stupid to think that the big companies used circuits designed by amateurs? No, not even close, Skippy, they used circuits designed by PROFESSIONALS, and the amateurs copied them!

>The replacement for your mentioned 60's designed radio is/was a radio with
>delay A+ and A- controls and a reed relay switching 100 watts plus of RF.
>Commonly called a Micor... or the Mocom 70 depend on your pocket book and
>how deep you let Motorola into it.

All Motorola radios used sequential switching. Check your Micor manual and look for the "P-T-T sequencing diagram" in the "Control Board" section. There you will find a diagram similar to the schematic I posted. And whether the sequencing is done with reed relays (a la Micor), seperate relays (a la Pride), or gapped relay contacts (a la Motorola, GE, Henry, Uniden, Kenwood, Henry, Collins...etc, etc), it all amounts to the same effect. The PROBLEM is that you can't accept that there is, and has been for some time, another method of sequential switching other than what you have learned from the internet! Get over your ego trip, learn from your mistakes, and move on!

>Stay in the 60's if you like... amplifier mfgrs have long since moved on
>to more practical circuit which left sequential rf tr relays by the
>wayside.
>
>:>Nice try at a side step dance... I was talking about your oh so popular
>:>sequenced relay contacts... on the same frame. Don't try to blend it into
>:>a sequenced relay layout. We were talking a single relay frame, not more
>:>than one relay.
>
>: You can accomplish the same thing either way. With two relays (and a diode) it's
>: an unbelievably simple circuit:
>
>: http://www.aimcomm.net/sparky/sq_rly.gif

>: And in case you never noticed, that's a very common circuit, even in modern
>: radios with reed relays. But if you are using open-contact type relays it's much
>: easier and cheaper just to gap a pair of contacts wider than the others on the
>: same relay. Jeez, Skip, I can't believe that you don't know this stuff -- this
>: is like high-school level electronics!
>
>Jeez frankie, in case you hadn't noticed... much of current amateur
>amplifier technology uses fast relays and electronic bias which don't
>require sequenced t/r relays. A typical reed or vacuum relay is faster
>than the typical driving radio/exciter. I can't believe you don't know
>this stuff... :-)

So why do the same radios use delay lines for their sequential switching? And
before you whine about going off-topic, don't forget that YOU were the one who
first mentioned delay lines!

>[snipage of frankies previous dance and sing, topic avoidance...)

What did you snip? I checked the previous post and it looks like you didn't snip
anything....?

>: That didn't answer the question -- why are they "bad news"? Because they aren't
>: "popular"? Maybe you should take a closer look at some of these un-"popular"
>: amps from makers like Collins, Henry, Kenwood.... or hey, you could even check
>: your copy of the ARRL handbook! I have the 1978 edition and it shows a couple
>: examples of sequenced relays.
>
>Notice the Decade... 1978 We've come a long way from 1978. Let me
>repeat the question; are there any current Amplifier mfgrs using
>Sequential Relays to switch RF..?

Almost all of them, including your referenced Micor. But that didn't answer the
question -- why are they "bad news"?

>As a sidebar notation: The collins 30-L1, 30-S1, Henry Series and the ill
>fated Kenwood TL-series of hf amplifiers did not use sequential relays for
>RF switching. Many or most of the above hot switch rf, which is not good
>news. That's where this all started...

Aside from the fact that triodes don't have screen grids, keep going.....

>: Oh, and speaking of the ARRL handbook, notice that in every single example of HV
>: power supplies where there are semiconductor rectifiers in series they use
>: resistors and caps. On p.113 (1978 ed.) it has an entire section about using
>: diodes in series, under the section on "Protection of Silicon Power Diodes".
>: That section basically states that because diodes do not turn off at the same
>: time (no matter how well matched they are), they are subject to transients that
>: exceed the PRV of the diode. So the ARRL recommends using resistors to divide
>: the reverse voltage equally, and capacitors to protect against unequal switching
>: times. So do you think that the ARRL handbook is wrong?
>
>No, I think that material writen in 1978 was probably pretty good in
>1978, not always the best in 2003... some 25 years later. Things

>change... big time.

How? Does the current ARRL handbook say something different? Does it assume that we are all using 1n4007's that were made within the past couple years (you know, the years when they are manufactured to such tight tolerances that they all switch off at EXACTLY the same time?)? Or does it realize the possibility that some of us don't have a retail account with Perfection Rectifier, INC?

>:>Because they are not reliable, nor are they practical, nor are they cheap.
>
>: One relay is more reliable AND less expensive than two relays and a diode,
>: don'cha think? And one relay uses less current, takes up less space, and is
>: easier to replace when it fails, so how are they not practical? And if they were
>: used by GE, Motorola, Uniden, and many major manufacturers for many, many years
>: (and are STILL used by other companies despite your unqualified claims to the
>: contrary), why are they "bad news", Skippy? They aren't. So shut your trap and
>: learn something instead of bragging about your ignorance.
>
>My original statement was about hot switching rf through the example
>amplifier, your attempts to divert to some other dual relay example are
>bogus.

There is no diversion, Skippy. Hot switching RF is easily avoided by sequential switching; i.e, sequential relays.

>Special sequential RF or your magic modified arc'd open frame type relays
>are old technology and not used in modern equipment. By nature, they are
>expensive and unreliable when compared to electronic switching (pin
>diode) reed or vacuum relays used in most current Amateur Amplifiers.
>Simple enough...

But the amplifier in question didn't use PIN diodes, or indicate the use of reed or vacuum relays. Now what's your problem, Skippy?

>I'm sure we'll be waiting some time for your example of special
>model sequential tr (for switching rf) relays used in any modern radio
>equipment. Those mechnical relays your standing behind are long gone from
>the big picture.
>The clock ticks louder and louder...

You seem to have an answer for everything else (except why sequential relays are "bad news"), so why do some manufacturers still use open-contact relays?

>"Your trap" seems to be shut on any current example..? what's up with
>that frankie..?

Why are sequential relays "bad news", Skippy?

>Onward...
>The number of relays required to complete the TR function is another
>whole topic.

Don't pull that off-topic crap -- why are sequential relays "bad news"? Address the issue, Skippy!

> I do not care to bring in your latest off topic
>number of relay diversion as it was never part of the original thread.
>Stay on track frankie.

Gladly. Why are sequential relays "bad news"?

>:>There is a reason few if any amplifier - radio mfgrs are (might use a)
>:>using sequential relay(s). You'd better jump from this "Titanic Topic"
>:>before you go down with the ship.
>
>: No, YOU better start paying attention to how these things are actually designed
>: and built! The reason (and I said this before) is because they are being
>: replaced by reed relays in sequential circuits. But not every manufacturer uses
>: reed relays. Some still use open-contact relays, such as the amp that YOU used
>: for an example.
>
>The original amplifier circuit which started all this, is still hot
>switching RF.

Possible, yet unproven. Regardless, why are sequential relays "bad news"?

> Your original followup to my mention of said suggested the
>amplifier might have had a sequential relay (or similar function) TR
>switching RF. I claim is does not and I stand by it until you prove
>otherwise.

Then it shall remain unproven. Still, why are sequential relays "bad news"?

>By the way Mr Technology... since you're paying attention of course..
>
>A typical "properly designed" amateur amplifier with reed relay switching
>probably doesn't have to have a sequential relay circuit, the reed relay
>is often faster than any typical Amateur Radio driving said amplifier.

The primary purpose of sequential relays is to provide the proper sequence between RX RF, audio input, final drive, final load and final power input (and screen bias for pentode/tetrode finals). Screw up the sequence and you can screw up the tranceiver. Now, why are sequential relays "bad news", Skippy?

>:>I guess all the keyed A+ and A- used by companies like Motorola (for
>:>decades) prefer the harder route. Come on now frankie...
>
>: No. After the old tube monsters went extinct, Motorola took a different path and
>: built some radios that put the relay sequencing into the mic switch, which
>: wasn't too popular because the mics weren't interchangeable between radios. But
>: many shops tried anyway, resulting in a lot of bad radios, which is one reason
>: why their radios sucked for a long time. The Mocom line used a single sequenced
>: relay, which was made just before they began using sequenced reed relays (using
>: circuits similar to what I provided in the schematic).

So?

>These magic radios you claim Motorola produced with sequential TR - RF
>switching... how about a model name...? In the commercial world, they
>were not long term reliable, they were expensive and they fell by the
>wayside when the technology moved on... some 25 or more years ago..?

All of them, or haven't you been paying attention?

>: But you should know all this already because you are a radio tech, right?
>
>Yeah, just by luck I worked for a Motorola Service Station for "a few
>years", it also happens to be one of the largest in the Nation... still.

Then why haven't you learned anything about sequential relays? What did you do
there -- mop the floors in the heads?

>So after you abandon your Sequential relay statements and try to merge
>your current foot in mouth position into some type of sequential reed
>relay circuit... how about you get back on track. As in current
>amplifier or radio technology... some 20 to 25 year later.

You keep whining about "dated" technology, yet you don't even know what was used
in the past OR the present.

>:>I believe the original subject was an Amplifier... was it not..? The
>:>last radio with a t/r relay was made ...? .... years ago..? ... decades
>:>ago..?
>
>: T/R relays are still used today -- did you forget about that amplifier we were
>: talking about?
>
>Was a pride right..? if it was made as shown in the original diagram, it
>still hot switches RF as I first mentioned. You claim it doesn't and you
>are wrong. Nothing has changed...

Wrong. Most of Pride's amps used seperate relays in a mode where one relay
controlled the other -- sequenced relays.

>:>: Reed relays don't carry RF very well. And they certainly don't carry
>:>: power because it tends to vaporize the Hg and destroy the relay. They

>amplifier uses reed relay switching on the input and vacuum relay
>switching on the output. In some cases, vacuum relays are used on both the
>input and the output. They handle the RF well and they are very fast...

>fast enough that the driving radio is most often not subject to rf hot
>switching.

Nobody said they weren't fast. I said they are lossy; and they are when compared to a good open-contact relay designed for power RF. Reed relays are cheaper and smaller. If given a choice, I'll spend a couple extra bucks for a -good- relay.

>:> I guess its time I went and threw out the large
>:>box of reed T/R relays I have from salvaged high power Motorola Micor
>:>Radio Equipment.
>
>: Oh, hey, remember your question above? "The last radio with a t/r relay was made
>: ...? .... years ago..? ... decades ago..?" I think you answered your own
>: question, Skippy.
>
>Actually...
>I was hoping you'd comment on your statement that "reed relays don't carry
>RF well..." but you avoided it big time.

They don't. They are used because they are cheap and small.

Why are sequential relays "bad news"?

>If you weren't so bitter and mean, people might like you better... even
>with your ego as bad as it is.

Quit trying to drag this off-topic and answer the question: Why are sequential relays "bad news"?

>:>I appreciate your concern frankie, but you have me confused with someone
>:>who really cares about what you post.
>
>: ...uh huh. That's why we are having this conversation, right?

>
>Mostly to get the proper facts out...

You have had ample opportunity to disclose as many facts as you want, but all you seem willing to provide is your opinion backed up with no more than two websites, both of which were quickly dismissed -- one because it contradicts your own opinions, and the other because of both theoretical and mathematical inaccuracies. Where are your "facts", Skippy?

> people make mistakes, both you and
>I. I call you on some of yours, you call me on some of mine. If you
>weren't so bitter about it, it might be a lot more fun. You wouldn't get
>that knot in your stomach and have your blood pressure jump up when you
>see that I've posted a follow up.

The difference, Skippy, is that when I make a mistake I admit it. When you make a mistake it's because you have no clue what you are talking about and are trying to sound like you are something you aren't -- technically competent. Unfortunately, your mistakes occur with just about everything you say, and since you can't admit them, you compound your ineptitude by piling on more of your BS theories. I'm not saying that you are incapable of understanding any of this stuff, but that you are too lazy to learn it the right way. Forget the internet and read some books written and published with some authority. Go visit your local public library if you can't afford the books. But for crying out loud, quit professing your ignorance by trying to top someone with five years of college and over 25 years experience in the field! Hey, I don't know everything, but I sure as hell know more than you ever will, and I certainly know how to fill in any gaps in my knowledge base. You don't even HAVE a knowledge base. Get one. Then we'll argue. Until then, you will be treated just like any other blowhard keyclown tech-wannabe.

>:>Hopefully Brian did not go for your dated relay information. Arcing /
>:>bending relay contacts for use in RF amplifiers is bad news.
>
>: Even though it's a method that has been used successfully for almost a century,
>: and still used even today, why is it "bad news", Skippy? Why can't you answer
>: that simple little question?
>
>Simple enough...
>Compared to the alternatives like pin diode, reed and vacuum relay, it's
>very unreliable.

Wrong. The reliability of the electro-mechanical relay is a tough act to beat. While the vacuum relay reduces arcing of the contacts, that only extends the life of the contacts. The reed relay is based on the same principle, but it's advantages are only it's small size and low cost. The PIN diode has severe power limitations, and is highly vulnerable to transient peaks and surges. And when you consider that an open-contact relay is easily maintained just by cleaning the contacts, and replaced with the simplicity of a vacuuum tube, there are FEW devices that can be considered to be as reliable.

> It's also more expensive than some of the circuits which
>replaced it.

You get what you pay for.

>Now your turn frankie.... who's bending relay contacts these days and
>where can we find it done..?

Beats me. But if you want to know who is using sequential relays, pick just about anybody in the list. How they implement them is strictly a matter for their engineers. For the amateur building an amp using open-contact relays, I would recommend gapping the contacts on one relay as one method of sequencing the switching, and I know that some do it that way. For manufacturing, I don't know why anyone would use an open-contact relay except for RF power switching. Frankly, I'm suprised how many use reed relays and not open-contact relays for RF power switching. But that's their problem because I don't use those radios or recommend them to any of my customers. If you saw the specs for yourself, you wouldn't either.

>:> Wasn't
>:>even great back in the 50's, 60's and 70's. Bad habits die hard... you

> metallurgy now
>produces exotic blends and alloys

60/40 solder = 60% lead and 40% tin (or is it the other way around?)

> and the wheel spins over hundreds of
>thousands of rpm in turbine units.

Not on -my- truck!

> Let's not forget you daddy's Oldsmobile
>looks nothing like a common auto and cloth covered airplanes are not
>common place in commercial aircraft mfgr.

Check the magazine rack at your local library or grocery store.

>Time for you to simply enjoy your crow sandwich and move on... it's 2003

So? People still use low-tech devices like wheel-barrows, matches, ... heck, even alcohol has been around for thousands of years and still works just the same! Do you barbecue with charcoal or propane (yuk!)? Is the fabric in the clothing you wear not made on a loom? And I think that even down there in granola-land that boats float based on the principle of Archimedes law of displacement. Just because technology is "dated" doesn't mean it's "bad news".

>It's been fun for the most part.
>
>"73's and good luck in the contest"
>skipp

You know, perhaps Technician class amateurs DO have HF privileges due to the reference to the old International requirement. However, where in the Schedule are the specific frequency bands allocated.

I would need to reread Pt97, but, my guess is that they either have NO specific allocated frequency bands, or, they would be the same as the Novice class licence.

Exactly, and with my old ARC 5 receiver you NEVER heard only one signal, the thing was wide open and you
had to pick out which signal you wanted to copy and learn to ignor ethe rest. Sure was good training, I
developed a very
good 'internal filter' at the outset and still retain that skill.

The upside was that the Novice bands were absolutely packed with slowspeed code and finding lots of
practice was no problem. You also learned to copy the many and varied 'fists', it was all hand sent, no
one had a keyer, though some used bugs. That provided another experience which developed lifetime
skills that no one today gets. I still enjoy copying hand sent or bug sent code, unless it's *really*
butchered.

> I'm still a very strong supporter of learning Morse via the W1AW
> code practice sessions.

It's probaby the best training resource around if one owns a receiver, especially after one has learned
basic Morse.

Yea,,Lelnad is pissed again..matter of fact, the entire "Team Voob" is upset..when was the last time you seen Frank, Lelnad, Hall, Geogre and N8 here together and all collectively pissed off? LOL...check out the last posts each of them made to this group,,,full of hate and piss...upset about cb radio...LOL.

I don't know it's been so long ago. Maybe it was pre-assembled. I was
born in 55 so it's not too clear in memory. I can remember smelling the
smoke from solder flux so that's could be why I recall that the radios
were in some kind of kit.

The wording we are arguing about, and the associated frequency table that it applies to, are both in 97.301(e). It's just a hassle to reproduce a table in ASCII text, but it's the table of Novice HF frequencies. This was mentioned earlier, but there is more than one thread on this.

There's no dispute that nobody can get a no-code General or Extra until after the FCC change the rules, but those rules don't refer to the international rules, and this one does.

...
...
...
...Faggot boy Chukkee Sukkee told this story a while back...it merits a reprinting !
...
...MY BIO!!!!!
...K8CPA
...Okay, this is the place where I tell you how I came to know how fucked
...up I am.... and all the personal information about me. I will try and
...answer all the questions:
...

...
...
...Date of Birth: June 28, 1972 <in the fall of 71 my daddy fucked a
pig,
...ya see>
...
...Place of Birth: Detroit, Michigan <in an alley behind the unit
block
...of Waterman Avenue>
...
...Religious Information: Well, first off, I am NOT heterosexual! I am
a
...faggot! I accepted penises as my personal Lord in 1980. I was all
of
...10 Years old, I knew exactly what I was doing, I knew that if I
didn't
...get cock in my mouth, I would not See the Lord in the rapture of
it's
...jizz pulsing. I have been butt pumped nightly for 12 Years.
Although,
...I was "Backslidden" for about 6 of those years, while screwing
female
...barnyard animals. I am now back serving my Lord penis. I would like
to
...Thank the Rev. Jack Hizhogoff of Detroit Gayboy Outreach (Web at:
...http://www.dgo.fag) for standing in the gap and slapping his manly
...dick up my fat faggot ass, and for a playroom where people like me,
...who were burned by chickenhawks with syphylitic dicks and fellow
fags
...in general, could come and give their hearts back to the Lord
penis.
...My only regret is that Rev Hizhogoff had to start pushing his manly
...dick in my fat faggot ass to the point where I could not bear to
bend
...over anymore, and I returned to my favorite pastime, cocksucking
in
...the men's room of the Detroit bus station.
...
...
..."Burned" by the syphylitic cocks in my mouth and asshole?: Yep,
Sure
...was.... I was... like I said before, I was sucking when I was 10,
...(around 1980), I was originally sucking just anyone, especially
born
...again Christians and other mentally fucked up Baptist types like
me. I
...loved those guys when theyd tell me to tongue their assholes.
...Condoms were a BIG no-no.... and I believed it!
...
...Speed ahead 4 years. in 1984, The Baptist Church I went to had a

bit
...of a controversy, The Pastor had resigned because he was caught
...bobbing on my young fat faggot pee pee, and things there were in a
...state of chaos, and my mom did not want to suffer having to put up
...with my faggot punk boy ass at home. She enrolled me into the
Detroit
...Institute for Hopless Gayboy Fatass Chumps. I started attending
and
...believe me, going to a Full-TILT anal only gayboy school. after
...attending one with a stated preference for teaching Hopless Gayboy
...Fatass Chumps to mainly suck dick, was a MAJOR SHOCK to my system!
But
...one thing kept me from leaving the place, was the fact that these
...people seemed to really love the Lord Penis. and there was this
one
...guy, named Robert Snyder, Who played the drums, like John Bonham,
...(from Led Zeppelin) and we got along great.... (Not to mention he
...would let me drink his jizz on the sly. That was HOT! least *I*
...thought so! Hey! I was 14 years old, and my hormones were at full
...TILT! So SUE ME!) (By the way, Snyder is now married to MoparHolic
and
...living in Ohio. I'm very happy for him.
...Anyhow... After being there for about a year. I started being
...interested in playing drums for them, as I was a drummer, from a
...young age... and I wanted to use my talent for the Lord Penis.
Well, I
...eventually got the nerve to ask if I could play for them, and they
...said sure, as long as I would give em all head before each
...show! AWESOME!!!... My first time playing for Detroit Institute for
...Hopeless Gayboy Fatass Chumps was a nightmare! I was scared, I
...totally forgot how to play because I was violently burping up the
...sprem I had sucked down before the show.! I was THAT scared!
Anyhow...
...speed ahead to age 19... I was changing as a person, things were
...changing at Detroit Institute for Hopeless Gayboy Fatass Chumps, as
...well. and a bit of a disagreement rose up between me and Snyder. I
...wanted to suck their cocks the night before the show instead of
...immediately prior to it. They said they needed the rush in order
to
...play better, and I was asked to step down from the music ministry.
...Needless to say I was crushed. and very upset at Snyder In fact. I
...didn't think I'd ever be able to forgive him for that... Anyhow...
I
...entered into what I called "My Dark Years" from age 19-26... Drugs,
...Drinking, eating 7 meals a day of Burger king, Dominos Pizza
...and Taco Bell in order to make myself an even bigger Hopeless
Gayboy
...Fatass Chump.... and when I found out that Snyder had turned
...heterosexual, I really went off the deep end... until...
...

...
...
...MY MOMENT OF CLARITY
...
...Well, when I was around 26, I was totally burned out on the
...Dominos Pizza... I was just sick and tired of being sick and
...tired... I needed cocks rammed up my Hopeless Gayboy Fatass Chump
poop
...chute and I needed it BADLY!!! the people I was upset at were gone
...from Detroit Institute for Hopeless Gayboy Fatass Chumps. I was not
...getting any older... and I was ready to stop running from the Lord
...penis. But I had issues to resolve in my life... How could just Go
...back to the fags that had only "screwed" me and wouldnt let me
...suck cocks in the first place? I still felt like I'd been wronged!
But
...I had the Clarity moment of a lifetime... This thought crossed my
...mind...
...
...
..."I was a FAGASS PUNKBOY MOTHERFUCKER BEFORE I came to the Detroit
...Institute for Hopeless Gayboy Fatass Chumps
...
...Why am I allowing something that happened 7 years ago, keep me from
...serving my God, the Penis?????????
...
...
...My Return to total Fagassedness!
...
...Well, I was 26 years old... I was wanting to come back full time to
...Lord Penis. But I wasn't going back to Detroit Institute for
Hopeless
...Gayboy Fatass Chumps (at least not at that time!!!) I had heard
about
...a church called DGW (short for Detroit Gayboy Outreach) and I'd
heard
...in the past that it was a nice place... So..... I wanted to
be
...where the Holy Spirit of the Lord Penis was... and there I was... I
...came to the church on Ann Arbor Trail... my first experience there
was
...a interesting one, I came in the parking lot... puffing on a 7 year
...old kid's cock, (in my years of being Backslidden, I picked up a
...nasty 2 child a day, sucking habit...) I finished my child, and
went
...in, and right away I heard SCREAMING in my ear... "what are you
doing
...here???" "these are the people that Screwed you, but would not let
you
...suck dicks!" act..... and when the song service started, the Holy
...Spirit of Lord Penis fell, and I became very uncomfortable, to the

...point when I had to leave! and I did!, I remember a usher, running
...after me and saying where are you going??? I remember looking back
at
...him and saying... "I can't handle this SHIT I got to get out of
here!"
...and I left.... Well, that week... I sort of prepared myself for
...service to mens dicks next week, I took my Book, Gay
...Sex For Dummies to work. (I worked midnights as a Security
...Guard, so I could walk around the ghetto apartment complex I
patrolled
...and peek in windows at sleeping little boys. and I had lots of time
to
...masturbate...) My mother realized I was fantasizing about kids
nuts....
...I found myself reading the Word, and Praying for a big hairy
...chested man to suck off.. by Sunday, I knew I was ready to come
...back... Went back that Sunday.... they had a Illustrated Sermon on
...fellatio with pictures from several fag magazines, it was great,
and
...needless to say, my Hard cock, Melted in the presence of the Lord
...Penis. and I knew that I wanted to come home.
...
...
...I thank the Lord Penis for his Love, That takes us whacked out
people
...as we are, and makes us his Servants....
...
...
...Where am I now... : Currently Attending Adult classes at The
Detroit
...Institute for Hopeless Gayboy Fatass Chumps.
...
...
...HAM RADIO?!?!?!?!?!?!?I BETRAY IT AND WORSHIP ILLIGAL FAGGOT
KEYCLOWNS
...BECAUSE THEY LIKE SUCKING COCK AS MUCH AS I DO!!!!
...
...
...I was, I guess you could say, Born into the CB FAGGOT Hobby... My
...Father, was a Dyed in the wool CB FAG... I even had a stint in the
CB
...radio hobby as well... Anyhow, one year (I think I was around 8
Years
...old...) my parents and I went to have sex with my Grandfather's
...Sister and her German Shepherd, in Conway, Ark, which is the world
...capital of CB FAGGOTS. To say the least, was totally impressed with
...the FAGGOT CB Hobby, because it satisfied my craving to run my
faggot
...mouth constantly AND to suck cocks!!!. and for years I did nothing
...about it, just sucking dicks constantly and that linear tuning on

...those tube type ILLEGAL FAGGOT KEYCLOWN amplifiers was just too
hard
...to learn. Speed Ahead to age 14, a friend of mine, Joseph Hampton
...(Ham call sign N8ExtremeCockNosher-but ALSO a secret ILLEGAL FAGGOT
...KEYCLOWN) who lived across the street from me, and also was
interested
...in getting his dick polished as well.. Well, we had some gay sex
...together... (you see this was when you had to be secretive about
your
...gayness! I was KB8HHZ (hugely horny for zebra!) and Joe was KB8HGL
...(Hungry Gonad licker!)... I believe me and Joe were originally
...licensed in 1989....
...
...
...On April of 2000. The FCC Restructured it's licenses... and I paid
a
...renegade VE 50 bucks and Received my General Class Ticket... I
often
...masturbate while thinking of linears for ILLEGAL FAGGOT KEYCLOWNS.
And
...really think Riley is mean. Maybe if I sucked his dick he would not
be
...after traitor scumbag shithunk fagboys like me.
...
...
...My Call? Is a Vanity call that I paid for, it is my initials!
Because
...as a Hopeless Gayboy Fatass Chump, I need something like that for
my
...ego.
...
...so there you go!
...
...
...I hope this answers everything you wanted to know about me!

: Frank Gilliland <sparky@nospamaimcomm.net> wrote:

:>What started your rant was my mention of hot switching of the amplifier
:>which was part of the original thread. You said it might have a
:>sequenced, arc'd or what term you'd like to use... relay. I said it does
:>not. In short, as shown the original (pride brand I belive) amplifier
:>probably hot switches RF unless you can prove otherwise.

: Wrong. It does neither until someone proves otherwise. I really don't care if
: the amp uses a sequenced relay or not, since it is designed for illegal use in
: the US market anyway.

Funny you felt compelled to comment on my mention of hot switching
issues with the amplifier in the original thread.

: Pride amps suck. Period. They are probably the worst designed piece-of-shit amps
: ever pushed onto the ultra-gullible illegal CBer market. But most of them had
: one advantage that few CB amplifiers ever had (or ever will have): they used
: seperate relays for input and output. And yes, they ARE sequenced! Even the
: diminutive Pride 100 had seperate, sequenced relays. And the use of seperate
: relays was enough to give them a reputation for stability (never breaking into
: oscillation), regardless of the fact that they would splatter up and down the
: spectrum like a spark-gap transmitter.

Actually
I have one or two Pride amps that are actually pretty nice. The mobiles
are crap for various reasons, but they are not exclusive in the poop
department. The early Palomar tx-50, tx-75 and tx-100 mobiles were just as
bad. I believe a spark-gap transmitter would do much worse.

: Lame excuse, Skippy. You should pick up a copy of the ARRL handbook. I'm sure
: Scott can give you the card catalog number if you can't afford a copy at the
: local used book store.

I have most every Handbook frankie... The newer ones tend to be quite
different as the technology moves along. One of your last posts, includes
information from a 1978 edition... got one newer... say the last decade at
least..?

:>If you stay with one example amplifier circuit, then it's much easier to
:>get into specifics... I'm not even sure where you'r "pulling your load on
:>the output tank until after it powers down" statement from. What do you
:>consider "powers down" frankie..? Sequential RF relays are not an
:>essential part of any tube or solid state power transmitter... your going
:>to up the power level of the topic amplifier to some broadcast
:>transmitter now..?

: Wrong. You ALWAYS apply plate voltage before screen voltage. It's a given. Just
: like using ground for the other end of any B+ supply. Or star-grounding each RF
: stage of an amplifier or receiver. When you read a schematic, some things don't
: need to be mentioned, and sequential keying is one of them. That's just ONE of
: the fundamentals you missed in your internet-based education.

I, nor anyone else ever claimed a tubes screen voltage should be applied
before the anode voltage. Why did you bother to mention it..?

I'm not sure where you're going with your "using ground for the other end
of any B+ Supply" statement.... I hate to rain on your parade, but there
are plenty of Amplifiers which do not use ground as the "other end" of the
B+ Supply. Some of the are amplifier brands you mentioned in one of your
most recient posts. Maybe you should better explain your statement..?

Sequential keying is not an issue in most of my amplifiers frankie, the
relays I use are much faster than the driving radio. That's current
technology frankie... how about you catching up. :-) You can read about
it at Rich's web page in the SB-220 QSK section. You might add a bit of
internet-based education to your current lineup of dated data.

: Quit whining and stay on topic -- why are sequential relays "bad news"?

Ahh... your moving around again... but what the heck. If the relays are
mechanical open frame type, they are slow and cause hot switching in the
typical amateur station.

You can avoid hot switching by switching to other options... like fast
reed relays (which you claimed don't handle RF), or vacuum relays which
switch much faster that most common amateur radios.

If you want to drag the thread back over to your beloved broadcast
transmitter, most all do not have T/R relays of any type switching the
rf pipe.
The original thread started over someone asking about a relative low power
level solid state HF mobile amplifier... a Pride was it not..? When you
jump back and forth from small solid state amps to large tube amps,
consider taking a moment to at least layout the example for the readers.

:>If you jump to larger broadcast transmitters... they are often loaded with
:>relays and permissive controls, but for the most part, there are no
:>special sequenced TR relays switching RF in the output power section. Per
:>the original thread that you took off dancing your tune... there is no
:>hot switching of rf in a typical broadcast transmitter.

: DUH!!! There is no switching AT ALL in a broadcast transmitter because it's not
: a transceiver! How dumb do you think CBers are? Oh, that's right, you equated
: their mentality to Forrest Gump: "Life is box of chocolatte."

Looks like you're running out of of plank frankie... over the side you
will soon be. To the sharks with ye'

:>As stated before, I'd settle on the name of any current Amateur or
:>Commercial Amplifier which uses Sequential relays to switch RF...? I'd
:>even offer up that you could also provide the name of any broadcast or

:>amateur transmitter which uses your special sequential relays to switch
:>RF..?

: I'm not a ham, but you are, and you claim to have a shitload of amps. Why don't
: you mic a few contacts and post the results? But remember that I have a few
: myself, and so do many people on this newsgroup -- IOW, don't post
: bogus data!

Actually, I'm only a pastrami sandwich... but being a ham has little to do
with the facts, other than it might expose your lack of real world hands
on experience about the amplifier hot switching topic; which is the
statement I made that you felt compelled attack in that original thread.

I don't know if I've bothered to mic a relay contact in some decades. On
the relative scale, most relays are cheap to replace when compared to
reliability issues. Most of my amplifier relays are reed or vacuum type
frankie... I'd have to damage them to get them open. :-) Some of my legal
limit level amateur amplifiers even have diode tr switching. Never has the
diode switching circuit failed... and they are fast as heck.

:>That was the original topic of your follow up post to my comments on
:>the mentioned amplifier... Sequential relays for RF t/r switching.

: It's been around a lot longer than you have, and even exists in your example of
: the Micor from Motorola. You want gapped contacts? I offered you a box full of
: them, but for some reason you have refused.

Thanks for the offer, but...
I have boxes of similar relays that I will probably never use. It's not
worth the postage to get them shipped down.

:> and yes, I've had and still have a few Pride amplifiers
:>in my collection. For the most part, they use generic relays. Some of
:>their amplifier circuits are pretty nice, most of their mobile amplifiers
:>are crap. Every amplifier they've produced had/has shortfalls in the
:>designs... but so has most every brand of amplifier made. If you want to
:>use one, you buy it and improve it as best possible and practical.

: What's your point? That you can't afford anything but Pride amps? Hey, I'll
: believe THAT! What I WON'T believe is that you designed and/or built any big
: amps (tube or ss) that worked! I think you have a few cheap amps that you value
: ONLY because you can't afford anything else!

The point was that I've have actual experience with the topic amplifiers,
something you seem to lack. You have me confused with someone who cares
that you believe I've designed or built amplifiers that worked. What you
think about hot switching TR relays has so far proven to be dated or wrong.

I'm slightly amused by your assumptions of my financial status frankie.
I'll be fine without your help, thank you. Back to the personal attacks
again... indicates you're about out of plank and ready to go over the
side. Watch out for the sharks...

:>Your talking an old Motrac era tube radio, originally designed from the
:>60's. You are not talking about any amateur or commercial amplifier
:>produced on a large scale. ... or for the most part, even a relative small
:>scale production for the consumer.

: Your lack of experience is showing yet again. Those old radios used the circuits
: most hacked by amateurs for both homebrew AND manufactured amps. Are you so
: stupid to think that the big companies used circuits designed by amateurs? No,
: not even close, Skippy, they used circuits designed by PROFESSIONALS, and the
: amateurs copied them!

Frank, the only thing I take out of a Motrac Radio are the receiver front
end... the rest is almost not worth pulling out of the radio. (actually I
do take a few more parts out of them for salvage).

What part of a Motrac era radio or circuit is going into my current
amplifier project frankie...?

Just as a trivia note... many of the engineers and technicians working at
Motorola and GE (and other radio companies) are/were hams.

You just want to focus around your vintage experience with a 60's era
radio to make your arc'd relay contacts comment(s) valid, even though the
radio hasn't been produced in some decades. No one is using that stuff
anymore frankie...

:>The replacement for your mentioned 60's designed radio is/was a radio with
:>delay A+ and A- controls and a reed relay switching 100 watts plus of RF.
:>Commonly called a Micor... or the Mocom 70 depend on your pocket book and
:>how deep you let Motorola into it.

: All Motorola radios used sequential switching. Check your Micor manual and look
: for the "P-T-T sequencing diagram" in the "Control Board" section. There you
: will find a diagram similar to the schematic I posted. And whether the
: sequencing is done with reed relays (a la Micor), seperate relays (a la Pride),
: or gapped relay contacts (a la Motorola, GE, Henry, Uniden, Kenwood, Henry,

Cute, but that still doesn't qualify your arc'd contacts relay statement,
of which you started out with... I hate to rain on your parade, but the
Micor base stations I have here, use only one reed relay (which you stated
doesn't handle rf). The typical delayed and Keyed A+ and A- lines in
those radios are clearly done to prevent hot switching, it's even
mentioned in a few places in their service manual. There's not an arc'd
relay contact in the place... went out with the Motrac it did... :-) your
first example radio.

Again frankie...
How about a mention of any current product amplifier product using
your special arc'd relays to switch "tr" the rf..? You can pick any of
the brands you mention above... I've got access to manuals for most
anything they've ever made.
How about the brand and part number for a current production (typical)
open frame relay made with special arc'd contacts for RF switching..?

: Collins...etc, etc), it all amounts to the same effect. The PROBLEM is that you
: can't accept that there is, and has been for some time, another method of
: sequential switching other than what you have learned from the internet! Get
: over your ego trip, learn from your mistakes, and move on!

I've yet to see any valid brand/model example made within the last few
decades that sequential switches RF using your arc'd relay contacts
method. You try like heck to skew your original arc'd contacts statements
over to a sequential switching topic... but homey ain't gonna' let you get
away with it. Care to address the original topic with the proper
answer..? We haven't seen the correct reply yet... we're waiting.

:>Jeez frankie, in case you hadn't noticed... much of current amateur
:>amplifier technology uses fast relays and electronic bias which don't
:>require sequenced t/r relays. A typical reed or vacuum relay is faster
:>than the typical driving radio/exciter. I can't believe you don't know
:>this stuff... :-)

: So why do the same radios use delay lines for their sequential switching? And
: before you whine about going off-topic, don't forget that YOU were the one who
: first mentioned delay lines!

The original hot switching topic has to do with RF from the driving radio
(exciter/transmitter) arriving at the amplifier before the amplifiers
internal relay switching is completed. I wont bother calling you on the
off topic issue here, but I will say that the delay line question would
probably be specific to model of radio. I have radios which have them, I
have radios which don't have delay lines. It's brand/model/application
specific.

:>[snipage of frankies previous dance and sing, topic avoidance...)
: What did you snip? I checked the previous post and it looks like you didn't snip
: anything....?

Then don't spazz about it... simple enough.

:>: That didn't answer the question -- why are they "bad news"? Because they aren't
:>: "popular"? Maybe you should take a closer look at some of these un-"popular"
:>: amps from makers like Collins, Henry, Kenwood.... or hey, you could even check
:>: your copy of the ARRL handbook! I have the 1978 edition and it shows a couple
:>: examples of sequenced relays.
:>
:>Notice the Decade... 1978 We've come a long way from 1978. Let me
:>repeat the question; are there any current Amplifier mfgrs using
:>Sequential Relays to switch RF..?

: Almost all of them, including your referenced Micor. But that didn't answer the
: question -- why are they "bad news"?

The Micor never hot switched because the payed attention to details...
even without a reed relay in place, hot switching would have been minimal
because they delay the RF to allow the relay time to complete movement.
The manuals clearly state said... Now, on to the current generation...

The "bad news" answer was addressed earlier in this follow up post.

I believe if you check the current Amateur product line, many or most of the serious amplifier mfgrs are using vacuum and reed relay switching and even pin diode (type circuit) switched. Those that include the just mentioned do not have a problem with hot switching rf. There are and will always be some lower priced amplifiers which use the classic frame type relay switching. To addres the hot switching issue, many have tried to include relay switching speed-up circuits in the TR controls.

:>As a sidebar notation: The collins 30-L1, 30-S1, Henry Series and the ill
:>fated Kenwood TL-series of hf amplifiers did not use sequential relays for
:>RF switching. Many or most of the above hot switch rf, which is not good
:>news. That's where this all started...

: Aside from the fact that triodes don't have screen grids, keep going.....

What would having screen grids matter in the subject of hot switching frankie..? Hows does it relate..? A tetrode equiped Collins 30-S1 hot switches just as bad as some of the 3-500z amplifiers by those other mfgrs.

:>No, I think that material writen in 1978 was probably pretty good in
:>1978, not always the best in 2003... some 25 years later. Things
:>change... big time.

: How? Does the current ARRL handbook say something different? Does it assume that
: we are all using 1n4007's that were made within the past couple years (you know,
: the years when they are manufactured to such tight tolerances that they all
: switch off at EXACTLY the same time?)? Or does it realize the possibility that
: some of us don't have a retail account with Perfection Rectifier, INC?

Some of the current handbooks mention special diode or rectifier banks made for amplifier applications. The common units are the "Silicon Alley" k2au type high voltage rectifiers which are actually just series strings of diodes in potted material.... and get this... they have not parallel caps or resistors inside, nor do the recomend them.

The last bank of Continental Broadcast transmitter rectifiers I had to replace were pretty much the same type of unit. Larger rectifier units made up of potted series diode strings. Same with the last Elcom, Bauer, Sparta, CCA and similar broadcast transmitter rectifier units I've had to replace. It's a common layout, I'm happy to say they do not often fail.

I buy my common 1Nxxxx series diodes from Digikey or Newark.

You would have to consult a specific hand book project for me to provide some feedback about said... Rich, many others and myself don't always take the handbook information as 100% That's why the amps list server is so popular, these topics are mentioned and gone over.

:>My original statement was about hot switching rf through the example
:>amplifier, your attempts to divert to some other dual relay example are
:>bogus.

: There is no diversion, Skippy. Hot switching RF is easily avoided by sequential
: switching; i.e, sequential relays.

Tell me/us how a typical exciter/radio/transmitter providing a very
optomistic... slightly delayed rf signal and external amplifier TR
relay contact closure could possibly transfer the coaxial paths ("tr
switch") using your original arc'd contact relays..?

Unless the relay are very fast... using reed relays you stated would
not handle rf... or vacuum type or a pin diode type switching is used, hot
switching will probably happen.

When you use some of the above mentioned... sequential relay switching
requrements in the common current generation rf amplifier go out the
window. Simple enough and you learned it on the internet... from me even.

:>Special sequential RF or your magic modified arc'd open frame type relays
:>are old technology and not used in modern equipment. By nature, they are
:>expensive and unreliable when compared to electronic switching (pin
:>diode) reed or vacuum relays used in most current Amateur Amplifiers.
:>Simple enough...

: But the amplifier in question didn't use PIN diodes, or indicate the use of reed
: or vacuum relays. Now what's your problem, Skippy?

Not a problem on my part, was on your part when I mentioned the original
topic amplifier hot switched (used a typical open frame relay).

Any amplifier which senses rf to signal and change it's T/R relay, hot
switches big time bad.

:>I'm sure we'll be waiting some time for your example of special
:>model sequential tr (for switching rf) relays used in any modern radio
:>equipment. Those mechnical relays your standing behind are long gone from
:>the big picture.
:>The clock ticks louder and louder...

: You seem to have an answer for everything else (except why sequential relays are
: "bad news"), so why do some manufacturers still use open-contact relays?

Cost mostly... most all of the better stuff has moved to diode switching
circuits, vacuum and reed relays to increase their T/R speeds... which
prevent hot switching.

:>"Your trap" seems to be shut on any current example..? what's up with
:>that frankie..?

: Why are sequential relays "bad news", Skippy?

See my answer toward the first part of this text frankie... you've tried
to rehash that question 3 or 4 times now. When refering to your original
mentioned arc'd contact type relays... they hot switch.

:>Onward...
:>The number of relays required to complete the TR function is another
:>whole topic.

: Don't pull that off-topic crap -- why are sequential relays "bad news"? Address
: the issue, Skippy!

If you review you past post... those darn motrac era arc'd relays are
waiting for you to come home for your crow sandwich.

:> I do not care to bring in your latest off topic
:>number of relay diversion as it was never part of the original thread.
:>Stay on track frankie.

: Gladly. Why are sequential relays "bad news"?

You gotta love it...

:>The original amplifier circuit which started all this, is still hot
:>switching RF.

: Possible, yet unproven. Regardless, why are sequential relays "bad news"?

If it was the original open frame type relay, there is almost no other end
result. Notice how I wrote "almost"... there are ways to prevent
hot switching of vintage amplifiers... a whole different thread, maybe
another time. Is your bad news diatribe all you're holding onto now
frankie... the plank is getting even shorter... the sharks are hungry.

:> Your original followup to my mention of said suggested the
:>amplifier might have had a sequential relay (or similar function) TR
:>switching RF. I claim is does not and I stand by it until you prove
:>otherwise.

: Then it shall remain unproven. Still, why are sequential relays "bad news"?

How many of your reading this think frankie's fallen overboard..? :-)

:>By the way Mr Technology... since you're paying attention of course..
:>
:>A typical "properly designed" amateur amplifier with reed relay switching
:>probably doesn't have to have a sequential relay circuit, the reed relay
:>is often faster than any typical Amateur Radio driving said amplifier.

: The primary purpose of sequential relays is to provide the proper sequence
: between RX RF, audio input, final drive, final load and final power input (and
: screen bias for pentode/tetrode finals). Screw up the sequence and you can screw
: up the tranceiver. Now, why are sequential relays "bad news", Skippy?

Twas an amplifier frankie, not a radio...
The original amplifier didn't have your magic list of additional functions
listed above. It had one or more open frame relays that hot switched,
regardless of any special arc'd contact you may claim it has/had, that is
all...

:>:>I guess all the keyed A+ and A- used by companies like Motorola (for
:>:>decades) prefer the harder route. Come on now frankie...
:>
:>: No. After the old tube monsters went extinct, Motorola took a different path and
:>: built some radios that put the relay sequencing into the mic switch, which

:>: wasn't too popular because the mics weren't interchangeable between radios. But
:>: many shops tried anyway, resulting in a lot of bad radios, which is one reason
:>: why their radios sucked for a long time. The Mocom line used a single sequenced
:>: relay, which was made just before they began using sequenced reed relays (using
:>: circuits similar to what I provided in the schematic).
:>
:>Motorola produced high powered tube amplifiers through the 80's and into
:>the 90's.

: So?

When addressing the original topic of amplifiers, motorola used fast reed
relays for tube amp circuits well into the 90's. The were fast and they
did not hot switch. Your Motrac generation arc'd relays were long gone
from the scene.

:>These magic radios you claim Motorola produced with sequential TR - RF
:>switching... how about a model name...? In the commercial world, they
:>were not long term reliable, they were expensive and they fell by the
:>wayside when the technology moved on... some 25 or more years ago..?

: All of them, or haven't you been paying attention?

Your lifted web picture shows two relays... which Motorola product used
two sequenced relays..? Were they arc'd contact type like you first
started out with... or were they reed relays which you claimed were bad
for RF..?

:>: But you should know all this already because you are a radio tech, right?
:>
:>Yeah, just by luck I worked for a Motorola Service Station for "a few
:>years", it also happens to be one of the largest in the Nation... still.

: Then why haven't you learned anything about sequential relays? What did you do
: there -- mop the floors in the heads?

Maybe it won't matter if you walk the plank... the sharks may not eat you
for fear of too much gas.

:>So after you abandon your Sequential relay statements and try to merge
:>your current foot in mouth position into some type of sequential reed
:>relay circuit... how about you get back on track. As in current
:>amplifier or radio technology... some 20 to 25 year later.

: You keep whining about "dated" technology, yet you don't even know what
: was used in the past OR the present.

You're pretty much out of steam now frankie... it's a beatiful day outside
and I'm going to start putting in arc'd relays into my pride amplifiers,
so hopefully you've got something valid in the next few statements... or
I'm pretty much done with you.

:>:>I believe the original subject was an Amplifier... was it not..? The
:>:>last radio with a t/r relay was made ...? .... years ago..? ... decades

:>:>ago..?
:>
:>: T/R relays are still used today -- did you forget about that amplifier we were
:>: talking about?
:>
:>Was a pride right..? if it was made as shown in the original diagram, it
:>still hot switches RF as I first mentioned. You claim it doesn't and you
:>are wrong. Nothing has changed...

: Wrong. Most of Pride's amps used seperate relays in a mode where one relay
: controlled the other -- sequenced relays.

And they hot switched rf like a mo-fo... I haven't seen a pride amp that
didn't hot switch rf.

:>:>: Reed relays don't carry RF very well. And they certainly don't carry
:>:>: power because it tends to vaporize the Hg and destroy the relay. They
:>:>: are usually only used for low-voltage DC and audio switching. But you
:>:>: knew that, didn't you Skippy?
:>:>
:>:>I'm laughing at you big time here frankie.. I guess decades of Motorola,
:>:>GE, EF Johnson, Aerotron rf amplifier and radio switching with reed relays
:>:>doesn't prove anything.
:>
:>: By "power" I meant kilowatts, but I'll let you gloat for a while anyway because
:>: I should have stated myself more clearly.
:>
:>The original amplifier was not at the kilowatt level.... but just for the
:>sake of others reading this. The typical multi kilowatt level amateur
:>amplifier uses reed relay switching on the input and vacuum relay
:>switching on the output. In some cases, vacuum relays are used on both the
:>input and the output. They handle the RF well and they are very fast...
:>fast enough that the driving radio is most often not subject to rf hot
:>switching.

: Nobody said they weren't fast. I said they are lossy; and they are when compared
: to a good open-contact relay designed for power RF. Reed relays are cheaper and
: smaller. If given a choice, I'll spend a couple extra bucks for a -good- relay.

So again... who's go those open contact relays that don't hot switch rf in
the typical amateur amplifier..? Why are most of the current amplifier
mfgrs using them..?

:>Actually...
:>I was hoping you'd comment on your statement that "reed relays don't carry
:>RF well..." but you avoided it big time.

: They don't. They are used because they are cheap and small.

... and fast... and they work well... and they don't hot switch rf in a
typical amateur amplifier (properly designed of course), like the open
contact/frame relays do in typical layouts.

: quit professing your ignorance by trying to top someone with five years of
: college and over 25 years experience in the field! Hey, I don't know everything,

Only 5 years frankie..? down here, College is a 2 year visit.

Any topic related paperwork (certificates or diplomas) down the
educational isle for you...?

:>Simple enough...
:>Compared to the alternatives like pin diode, reed and vacuum relay, it's
:>very unreliable.

: Wrong. The reliability of the electro-mechanical relay is a tough act to beat.
: While the vacuum relay reduces arcing of the contacts, that only extends the
: life of the contacts. The reed relay is based on the same principle, but it's
: advantages are only it's small size and low cost. The PIN diode has severe power
: limitations, and is highly vulnerable to transient peaks and surges. And when
: you consider that an open-contact relay is easily maintained just by cleaning
: the contacts, and replaced with the simplicity of a vacuuum tube, there are FEW
: devices that can be considered to be as reliable.

That's why most of the current amateur amplifier mfgrs are not using
them..?

:> It's also more expensive than some of the circuits which
:>replaced it.

: You get what you pay for.

Hey, we agree on one thing...

:>Now your turn frankie.... who's bending relay contacts these days and
:>where can we find it done..?

: Beats me. But if you want to know who is using sequential relays, pick just
: about anybody in the list. How they implement them is strictly a matter for

Aaaaahhhhh.... again we see you try and merge your original arc'd relay
contacts into a now revised sequential relay bail out topic...

Nope, you made the arc'd relay statements and you get to stay with them
frankie. No cigar on the bail out.

: their engineers. For the amateur building an amp using open-contact relays, I
: would recommend gapping the contacts on one relay as one method of sequencing
: the switching, and I know that some do it that way. For manufacturing, I don't
: know why anyone would use an open-contact relay except for RF power switching.

My how the story changes....

: Frankly, I'm suprised how many use reed relays and not open-contact relays for
: RF power switching. But that's their problem because I don't use those radios or
: recommend them to any of my customers. If you saw the specs for yourself, you
: wouldn't either.

You might ask most of the major amp mfgrs and post your question on amps.
You could get unbiased answers from people in the industry. I might be
one of them... :-)

: So? People still use low-tech devices like wheel-barrows, matches, ... heck,
: even alcohol has been around for thousands of years and still works just the
: same! Do you barbecue with charcoal or propane (yuk!)? Is the fabric in the
: clothing you wear not made on a loom? And I think that even down there in
: granola-land that boats float based on the principle of Archimedes law of
: displacement. Just because technology is "dated" doesn't mean it's "bad news".

It is when it hot switches RF...

:>It's been fun for the most part.
:>
:>"73's and good luck in the contest"
:>skipp

: Read a book.

Do almost every day frankie... OK, I'm pretty much done with you for
this thread... you can continue to walk the arc'd relay plank if you want.

Maybe next time you won't try to jump around off topic so much... better
than previous times... but still pretty much a poor attempt at a smoke
screen on your part.

Sum it up frankie... open frame "arc'd" relays in typical amateur
amplifier rf switching "TR" circuits hot switch. In most typical cases,
they do not complete their movement before the rf arrives. In short, they
are not fast enough for many modern radios. Hot Switching is bad news.

that is all... I'm out of here.

I just have to smile a little because while the rest of the amateur
community is on UTC time, this guy is telling everyone to get on the air
at 6 pm. Yep, a real genious.

I used a Shakespeare 1600 for 15 years and have recently purchased a Shakespear NBS 2010. They are quite a bit better than the Antron 99. The IMAX 2000 comes close and radiates as well. The problem with the IMAX 2000 is it is not as well constucted as the Shakespeare.

Shakespeare makes antennas for the US military, their antennas tend to be a bit more durable.

Hope this helps......

Homac

At 5 wpm with Farnsworth spacing, you have around 1.5-2 seconds
between characters. That should be plenty. Are you using Farnsworth
spacing?

Try this experiment: Have someone read a random sequence of standard
phonetics ("Hotel, Sierra, Alfa, Yankee..." at a rate of about one
word every two seconds while you write down the first letter of each
word. If you can do that, it's a good bet you can learn to copy 5 wpm
code.

Are you block printing or writing cursive? I found block printing
avoided a lot of problems because each letter stands alone.

> > > I just get further
> > > behind. I practice at least 20 to 30 minutes usually twice a day if not
> > > more. I use computer programs and ARRL training CDs.
> > >
> > > I will check "The Art and Skill of Radiotelegraphy". Thanks for the
> > > encouragement.

Try this:

Set the computer to send just two unrelated characters - say, R and Z.
Practice copying those two until you get 95% or better copy. Then add
just one more letter and practice until you can get 95% or better with
those three. The trick is to not add any new ones until you know the
old ones almost perfectly.

Good advice. But don;t be afraid to backtrack as above, to find what
letters are giving you trouble.

>
Me too. And no time was allowed for going back - when the code
stopped, they took the paper away. Plus, if the examiner could not
read your writing, you flunked. Also you had to send 20 per to the
examiner's satisfaction.

But all that has been gone for over 20 years now. Ancient history. Yet
many hams licensed since those days could easily meet that standard.

Note that today's test can be passed by answering the questions OR
finding one minute (25 characters) of solid copy.

My credibility is just fine.

Why would I ever bother posting a pic of a radio
for the sake or any anti rec.radio.cb poster.

P.S. I hope you don't lose sleep over not being able to see this pic.

Perhaps we should all do a web search on the discone. My understanding was (and I am not particularly familiar with the discone, although I have used a biconical - a biconical is to a discone what a dipole is to a groundplane) that gain increases with frequency (to a point). It might be possible (and I emphasize 'might') to achieve a 7dBi gain (although that sounds high to me) in the upper middle frequency range of the device. At 25 to 30 MHz, it would likely have a gain equal to or lower than a groundplane. Anyone care to do an internet search and see what they can report?

Then it will be easy for you to explain "fully cophased 102" stainless whips". What class would be indicated by the call sign KQV4990?

And oh BTW, do you have a job yet? My guess you'll answer that as fast as you answered the question about being currently employed. You didn't answer at all.

No, I don't. I specifically said I wasn't sure and I had heard - and I checked commercial sites as well as amateur and this is what I came up with:

The discone antenna is a broadband unity gain (ZERO dB) antenna.

From the commercial sites I checked, it appears that one can expect the SWR to vary up to 2.5:1 (usually under 2:1), which isn't particularly good at all.

I was wrong (and did mention I wasn't sure as I haven't used them), but did bother to check it out. For others, it is always a good idea to verify information. Zero dB gain (well, one commercial site specified it as zero dB compared to a dipole or 0 dBd). So, it is better than a dummy load, but far superior antennas are available with omnidirectional coverage.

Ah, well it doesn't really look much like him
really. I have met him a few times at Hamfests so
I know what he looks like. I also found out he
doesn't spend much time on this news group any
more. He's in business with a buddy of his making
antennas. From what he says they seem to be doing
rather well at it which doesn't leave him much
time for playing on the computer.

going?

I'm still planing on it Mopar. In fact I'm trying
to talk my step dad, it was my real dad who just
pasted away, in to showing his '54 Kaiser-Darrin
at the dream cruise. It looks like the ones at the
URL's below except his is red with a white leather
interior. There are only about 385 more or less
that are still known to exist out of a total
production run of only 435!

My step dad got it from his father when he died,
and his dad got it new. The last time it was on
the road was in 1970. Since that time it just sat
in the garage until a couple of years ago when my
step dad decided to get it restored. He can't do
the work himself so he paid a retired engineer
from one of the "Big-3" to do the work. I saw it
for the first time last Sunday at a local Art /
Auto show up in Lake Orion. The car was almost
done. It still needs a gas tank, the rag-top roof
isn't done yet and a few other items.

There are several unique things about the
Kaiser-Darrin. It has a fiber-glass body. The
doors slide forward in to the front fenders to get
in. That's right, they don't swing open like a
regular car door. The engine is the same as the
one used in WWII Jeeps, at least on his.

I know some folks scoffed, but it is important enough to have your readers read it. It IS a serious a matter that some folks don't think is valid, but more and more, Mr. Hollingsworth is working with ham volunteers to stop it. Some say that FCC has not the time or funds to curb such activity, but they have asked ARRL and ham volunteers to assist in monitoring for such. Truly, FCC and hams are aware of it and are NOT happy about it! FCC IS determined, with volunteers, to put a stop to it.

J

FCC Warns Trucking Firms about Alleged Unlicensed 10-Meter Operation
NEWINGTON, CT, Jul 28, 2003--The FCC Enforcement Bureau has sent Warning Notice letters to three highway transportation firms asserting that drivers of some of their vehicles may have transmitted without a license on 10 meters. All three notices allege the unlicensed operations took place July 8 on Interstate highways in South Carolina.

Letters went out July 14 from FCC Special Counsel Riley Hollingsworth to Jolly Roger Capital Ltd of Columbia, South Carolina, Tidewater Transit Company of Kinston, North Carolina, and Shuford Lumber of Marion, North Carolina. He warned all three firms that operation of radio transmitting equipment without a license could lead to fines of up to $10,000, equipment seizure and even imprisonment.

Hollingsworth cited "information before the Commission" that spelled out each vehicle's highway location, license plate and--in two instances--operating frequency (28.085 MHz). One of the Warning Notice letters also identified the make and year of the vehicle. The alleged offenses were said to have occurred when the vehicles were under way on Interstate 77 or Interstate 20 in South Carolina.

Hollingsworth asked all three firms to get in touch with him to discuss the allegations.

The training CD's aren't bad for practicing the code if you know the code and just want to get better. The real situation is that a person needs to still learn the code in the beginning. It would the same as if I was listening to Chinese language and didn't know a word of the Chinese language versus knowing the language on a basic level and listening to Radio China or something like that......

It is fitted in the audio circuits and has nothing to do with channel, so will work on all channels.
Although, it can be switchable, so you can use it when you want or switch it off at any time, on any channel.

Think of it as a squelch. The difference is that a standard squelch will open up when a signal is strong enough, but the CTCSS will only open up if they are sending the correct sound. Also, it needs no adjustment - it is either on or off.

The only "mission" here is for the TRUTH.

B*llsh*it doesn't fool anyone - it just makes the case for legal
operation look stupid. If you cannot promote legal use with
real facts - then just keep quiet.

>> Taking two examples:
>> Channel 3a = 26.995 MHz.
>> This is 10KHz from channel 3 and 10KHz from channel 4.
>> Channel 7a = 27.045 MHz.

>>
>> The same 10KHz applies to all 5 of these "a" channels.
>> 10KHz is the standard spacing between CB channels.
>
> In the case of two locals, one on channel 3 and one on channel
>3a, I'd say the one operating *illegally* on 3a will definitely create
>adjacent channel interference to the one operating legally.

No more than the one operating LEGALLY on the other adjacent channel.
Are you suggesting that all adjacent channels should remain unused - giving
just 20 channels?

If, in the UK, we can fit FM CB within 10KHz spacing, you certainly should
fit AM CB in the same spacing. Work it out - what is the bandwith of an AM
voice transmission on CB?
Exactly - it should fit, unless there is another problem, such as severe
clipping, overdriving, etc.

If someone is splattering the adjacent channel, they will splatter whether
they are 10KHz away legally or illegally - 10KHz is 10KHz, regardless of
laws. So, they have another problem that needs sorting, or they will
continue to cause such splatter, whatever channel they use.

If you don't understand such basics, then go study - then come back and
argue with REAL facts.

> And did you ever stop to consider that 3a (and the other "a" channels")
>are allocated for non-voice use for a *reason*?

That was not the issue. You claimed that using a channel 10KHz
away would only cause splatter if that frequency was not legal to
use for CB... which was rubbish.

> A great number of RC toys and model enthusiasts use those frequencies,

So, why did you not argue their rights, instead of giving BS?
Maybe you think that we should also avoid using the legal channels adjacent
to these RC frequencies - as we would splatter, and cause problems with
their reception.
Remember - 10KHz is still 10KHz, even if it is legal.

> Poor Brainbuster and Twisty. You can't say that voice operation
>on those channels is not illegal

Oh, yes I can...
Voice operation on those frequencies is not illegal.

Well, I cannot speak for America, but they can be legally used here in the
UK... without a licence.
The list of bands allowed includes "22.00 MHz - 29.99 MHz", but there is no
restriction on emission type - so voice is allowed.

However, if you wish to apply for a licence, you can use some decent power -
up to 100 Watts on certain HF frequencies, including 27.045MHz. Application
of a licence for this (and other listed, agreed spot frequencies) is just a
"formality". Other spot frequencies not listed would be considered,
although there is "little chance" of getting a licence for a HF frequency if
it is not in the list.

> so all you can do is try to refocus
>on semantic word games.

No, you told lies... we merely pointed out the fact. Either argue your
point with the truth, or give up.

As you will see, I had no problems with Frank's discussions about the use
of SSB as opposed to power, and even agree with his discussion about
the problems caused by speech processors.
But then, he was reasoning with facts - which makes a good argument.

I have also made it clear that I believe that better antennas are a better
way to increase performance. Using a gloryfied dummy load, then shoving
2KW through it is pointless.

Lies just make you look a desperate fool, with no real reason but anger.
But then, looking through the posts to this group, anger seems to be the
main driving force in many "akc" postings.
The anger, hatred, "gay" posts, and lies simply give you zero credibility.
If that doesn't bother you, then you have no real desire to make a
difference - just to destroy the newsgroup.

You cannot verbally beat people into submission - that never works, you
simply make people more stubborn to defy you. Either you are too stupid to
realise that (it is a principle taught to children from pre-nursery age), or

your real desire is just to Troll this newsgroup.

Brainbuster.

Definitely a problem if you do not have a HF reciever at all. And those Rat Shack ones suck for that too. There used to be publication of VHF rebroadcasts of the w1aw transmissions, but I have yet to hear any around here in Michigan. Where the hell is the so-called field organization they are so proud of on this one? Even if it is a members-only thing, still you would think that the local (state-wise) field organizations would think that was important enough to rebroadcast.....

I would actually have to agree with Kim on this one. I have many times asked (tactfully and politely) certain questions of blind hams as to their experiences as hams dealing with the loss of sight as it relates to the hobby. They were definitely helpful and supportive in "educating" me to their circumstances. A definite thank you at the end of the questions with an explanation that I was trying to understand what it is like to be in their shoes definitely helped.

A completely different issue I had and/or have is not the speed as much as the audio pitch of the code being sent. It's hard as hell to get a VE team to adjust the pitch/tone sound at all if they even bother to send with a key. Hell, a couple of them are only using premade CD's, which are played a fixed rate and since most VE's are not frivolous (at all), they usually only have a "basic" cd player, and would not have equipment capable of code at a lower tone but keeping the same speed.

I say this because my hearing loss makes me hear "normally" sent code at its "proper" pitch rate as one long solid tone, as if you placed a finger on a straight key and never lifted up at all while sending. In other words, if there was a 2 minute QSO in morse code being sent at its "normal" pitch, it sounds like a 2 minute long T to me. If I lower the frequency of the tone of the amount of at least 200-250hz less, to where it starts becoming a more rich, bass(y) sounding tone, then I can distinguish the difference between a dit and a dah.

On a lighter note, I think my ex-wife had a voice in the same range as being sent at most VE sessions..... she said I never listened to her!

I whole heartedly agree that truckers who run these illegal radios should be dealt with severly.

But you know what's interesting in the history department?
When CB radio was first assigned to be used by the public at large with but a mere a license application, it was amateur radio operators who thought it was "cute and silly" to yack away on those frequencies just because they had the means to do so.
Now the tables have turned and those same amateurs have become the watchdogs.

What is needed to curb the appetites of truckers, and others to transmit on amateur frequencies without a license, is legislation to make it illegal to sell an illegal radio.
Also one that would slap a hefty fine for using a modified radio, as well as for doing the modifying.

Begin today and write the lawmakers to have this oversight corrected.

LOL,,anytime, Lelnad!,You aptly demonstrate how when one gives a razor blade to a baby to play with, he'll put it in his mouth everytime and try to eat it. The only thing you have managed to illustrate, is how far you need go to cut, snip, and paste and misappropriate things out of context in attempted harassment. Well, not quite,,you also have managed to show what a lousy amateur you are by using the ARRL in your sig...when you use that sig, you represent that organization, whether you comprehend such complexities or not. Feel free to "haunt" me at your convenience, with your select editing,,I'll be here to counteract your insurgence with the truth,,,as always. Wonder if the ARRL shares your views of stated harassment with those that hold opposing views on subjects and those who easily illustrate your deficits in communication....LOL!

I know some folks scoffed, but it is important enough to have your
readers read it. It IS a serious a matter that some folks don't think is
valid, but more and more, Mr. Hollingsworth is working with ham
volunteers to stop it. Some say that FCC has not the time or funds to
curb such activity, but they have asked ARRL and ham volunteers to
assist in monitoring for such. Truly, FCC and hams are aware of it and
are NOT happy about it! FCC IS determined, with volunteers, to put a
stop to it.
J
_
Hey Jer! Maybe some on the transportation group have scoffed, but I
haven't seen anyone on this group scoff. Intruding on hammie bands is
bullshit! There are plenty of frequencies for cbers, free-banders, and
free-banding hammies to play with. In addition, I really can't recall
anyone specifically claiming enforcement against intruders on hammie
bands
was non-existent. The feds have usually and rightfully defended ten
meter against unlicensed intruders. Tis a good thing!

Arrangements for a different tone have to be made in advance so that they
have time to obtain a CD or tape of the needed pitch from the VEC. You
can't just drop into a test session and expect them to have anything
different than the commonly used tone.

Totally subjective.

>The IMAX 2000 comes close and radiates as

>well. The problem with the IMAX 2000 is it is

>not as well constucted as the Shakespeare.

My "beater" antron has been abused in more ways than you can imagine, including being dropped in abrasive salt water. It has been dropped from tall trees while being bungee strapped, it has been whacked by trees when being used as a mobile antenna during many hunting seasons, it has slivers of fiberglass that irritate the bare hand, is faded from the sun, is so old I can't remember it's exact age, and is used at least 4 days per week with kick-ass nothing-less-than-spectacular results. When can I expect it to fail and what will happen to its inferior contstruction? <g>

>Shakespeare makes antennas for the US

>military, their antennas tend to be a bit more

>durable.

you seem to treasure your precious ten meters.....how often do
you talk there???????? also i think this type of activity encourages

a system of 'rats'.....do-gooders, buttdinkskis.....who haven't anything better to do . anyone that does this sort of stuff is a idiot.....think about it.....some guy hears a trucker talking on ten meters and jumps in his car, and goes and tries to find out who is doing it.....i tell you what you have here.....you have a bunch of former cb types who have bought into all of the hype about upgrading, etc.....and now they think they are 'important'.....so under the cover of the 'law', they do such things,.....thinking that they are doing good .....but what is happening here is pandora's box.....you are inviting the government to become more and more intrusive in order to justify their budgets and their jobs.....and where else can you sit around on your ass and get paid for it, except the government.....you have to ask yourself .....who controls what.....??? you guys seem to have a much greater self assessment of yourselves as far as radio goes, than should be attributed.....who is in control???? you????? the arrl????? the american citizen???? and i ask you.....in all seriousness.....how much harm is done when a hard working trucker, talks on 10 meters.....they all use rinky dink rigs.....anyways.....you guys are tilting at windmills.....you think the government is your friend.....one day, this too shall pass.....gentlemen .....your radio art is dying.....and all you are doing is contributing to its demise....

Yep, As I was aware of that. And I never expected them to change for me at the last minute. BUT, I do believe that with enough warning ahead of time it should be considered more than fair for a VE team to make an adjustment. It should be no problem for a VEC to be able to send via code practice oscillator!!!!!! Wouldn't that be a shame if the VEC's have become so lazy they can't even send a code test via a key because they are relying on the code CD's and tapes.

Where the hell did you think I expected to walk into a test session in the past, and at the last possible moment expect a major change?

Amen, don't even think about one of those turkeys. One advantage I/we
had back then was a profusion of quite inexpensive but usable HF rcvrs
which are not available today. Mostly military surplus gear and some
commercial cheapies like the Hallicrafters S-38. In this respect maybe
we had it much easier than the newbies today have.

Too much work. Plus once VHF comes into play CW becomes a no-interest
thing. We've had sporadic attempts around here to get 2M code practice
sessions going but they didn't last very long.

I never thought much of the Maco Antenna element to mast hardware, never seen a Jo-Gun that I knew was the true name of...

You might consider an original Moonraker. They are still available...

Around my regional area, there are some late 70's and 80's era antennas still up and in fair shape. (The rotor control box is probably long lost/gone)

I also like the PDL-2 and Y-Quad... but the PDL-2 has (or had) plastic hubs. All of the above are great preformers...

cheers

I built an amplifier into one some time back. Funny to hear a speaker
with a small bit of background fan noise. Even funnier to see the coaxial
cables routed to the back.

(Worked great on a converted (10m) 2000GTL station.)

cheers

Yessir. Ya had to learn operating skills along with learning just the
code. Whether ya wanted to or not. There was no "pause" button on W1AW
and ya couldn't replay it either.

I saw some *really* off-the-wall Novice rcvrs. One buddy of mine
comandeered an old wooden case Philco BC/SW rcvr which didn't have a
BFO. Musta had a 15 Khz "bandwidth". So he copied the thumps the
speaker cranked out. Some time later he managed to pick up a
half-working grid-dipper and tuned the dipper just off the sides of
the incoming signals and viola, hetrodynes he could copy. As long as
he had his mitts on both tuning knobs. I came along and had a
brainfart. I fished an insulated wire down inside the last IF can and
wound the other end loosely around the GDO coil and tuned the GDO to
455 kHz. Instant BFO. He took it one step further yet and added a
gawdawful narrow passive surplus audio filter and cruised all over
40M with that lashup. The homebrewed TX was another Rube Golberg gem,
some xtal oscillator tube driving a 6146, all of it in a cigar box.

Imagine any nocode even considering jumping thru those hoops just to
get on the air.

> The upside was that the Novice bands were absolutely packed with slowspeed code and finding lots of
> practice was no problem. You also learned to copy the many and varied 'fists', it was all hand sent, no
> one had a keyer, though some used bugs. That provided another experience which developed lifetime
> skills that no one today gets. I still enjoy copying hand sent or bug sent code, unless

it's *really*
> butchered.

Absolutely correct. It goes farther than that though.

As much as a pain in the butt as those days were in a number of
respects that regime had a number of huge advantages over what is
available today to newbies. The Novice bands were actually a very
successful "support group", we had no options but to clump together
and work with each other toward the same objectives. We climbed all
over each other trying to get our speeds up and beat the one-year
clock on our drop-dead tickets.

Boy there was the incentive licensing move from Hell! But it worked
and the only bitching I ever heard was from a few of the OFs who
turned their noses up at the mere thought of allowing newbies to get
on the HF bands with a lousy 5wpm code test. Turned out to be a
non-sequeter for them 'cause the FCC tossed us into our isolated
playpens 'way up the 80 & 40M bands where they didn't have to put up
with us. We *had* to work each other. Clever arrangement in
retrospect.

And in many if not most cases getting a Novice station took a bunch of
self-taught knowledge and work just to get on the air. All of which
were more learning experiences. One did not use a rubber-duckie or any
otjer catalog antennas on 80 . . autotuners . . as if . . digital
nothing . .

No doubt a dumb-down proponent or two will scan this diatribe and get
some giggles out of the ramblings of another stuck-in-the-past grouchy
OF. But in the end who will be the **real** losers?

Yeah, there's a "cultural gap", fuggem all, I hope they get just
exactly they want.

> > I'm still a very strong supporter of learning Morse via the W1AW
> > code practice sessions.
>
> It's probaby the best training resource around if one owns a receiver, especially after
one has learned
> basic Morse.

Yup. Lotta newbies have used zero-cost borrowed rcvrs. I'd loan one of
my "spares" to anybody who was genuinely interested in copying W1AW.
I "loaned" my old HQ-120 to the kid accross the street, he then loaned
it some other kid . . . I have no idea wher it finally landed.

> > Today they transmit computer-generated code

Since were on a trip down memory lane. This is how I received my FIRST HAM
SIGNAL.

I had a 6 transistor jap radio. I started 'tweeking' the coils and heard
this booming CQ CQ CQ this is W*xx.....He was down the street on the next
block.

Its been downhill eversince

dear abby hitting it out of the park.....

Dear Abby:

My husband is a liar and a cheat. He has cheated on me from the beginning. When I confront him, he denies everything. What's worse is everyone knows he cheats on me. It is so humiliating! Also, since he lost his job two years ago, he hasn't even looked for a new one. All he does is sit around the living room in his underwear and watch TV while I work to pay the bills. And since our daughter went away to college he doesn't even pretend to like me. He keeps calling me a lesbian. What should I do?

Signed, Clueless

Dear Clueless:

Dump him. You're a New York senator now. You don't need him anymore.

And your rules don't apply in the UK... or any other non-US country.

This is rec.radio.cb - not usa.radio.cb
It is for discussion of CB radio - regardless of country.

No answer for the rest of the post, the real issues... huh.
Just a Troll.

Brainbuster.

They are supposed to make those provisions. If they did not, they were in the wrong. However, I would not favor them using hand sent code with an oscillator for two reasons. 1) Oscillators are often not adjustable in pitch. 2) Some people who copy quite well have absolutely lousy fists and do not send good clean code. It takes a pretty good op to copy some of the people out there.

It's certainly possible, but in this day and age, I could see prospective amateur one complaining that the custom test was too easy or too hard, or complaining that he or she wanted to take the test from a CD instead of a real person, or some other such.

Almost all of us can handle the standard test methods.

The rest can be accomodated for.

Over the course of my testing, I took tests at 4 different places: Williamsport PA, Butler PA, State College PA, and Lock Haven PA. ALL the VE teams were extremely helpful and accomodating. Those who knew of my hearing problem when I took Element 1 (twice, cuz I flunked the first time) were just great. The first time I took the test, they were more bothered by my failing it than I was, and the second time, I spoke to one of the VE's beforehand, and he outlined the different methods I might use, and explained the lengths they were capable of going to to accomodate my needs.

I just want to point this out, because the tone of you letter sounds like you think that VE's are some sort of ossified "my way or the highway" people. They aren't.

I appreciate the URL. I know this thread is getting old, but for what it is worth, there was a heck of a write-up in an IEEE meeting in 1994 or 1995 concerning Poynting theorem and the fact that antennas can be built that are very small and have gain. We then had the cross-field antenna and now the E-H antenna. In theory, this can be done; we are just waiting for a practical antenna. There are claims; I just wish I could test a couple of them in an anechoic chamber as well as mounted high against standard antennas. The cross-field and E-H antennas arguments are starting to become as heated as the code/no code arguments amongst amateurs (and others).

73 & thanks for the URL from Rochester, NY

Not sure if a "code key/Oscillator" applies here, but if a person needs to
have special testing done, the rules I"ve seen written state that the
examinee is the one who must furnaish the equipment to the VEs in which to
use to accomidate that persons handicap. Perhaps the VEs didn't have one.
Not every one does.

I can say this.. I HAVE seen some VEs who were real bastards. Not wanting to help anyone. But I've seen those too, who helped all as much as they could. However, my former comment still stands, according to the rules I've read, if an applicant is handicapped and requires special equipment to use in testing, it is THEIR responsibility to provide it for the VEs to use. It is NOT the VEs place to provide it. There is a comment though I'd like to make about the My way or the Highway when it comes to testing. It is "supposed" to be required of the VEs to afford the candidates the best possible conditions in which to examine. IF someone in the waiting or even an applicant his/herself starts making it miserable for the others OR even before hand if the applicant fails to provide all required documentation, the VEs have a right to evict them from the area. what is the psswd??? the password is 'dolt' and that about describes
you two dirt clods........listen if you wienies want to do something
constructive and for your cause, whatever that is..........then do
something about this......in september the keyclowns hold a keydown
not far from where your daddy , riley works.......and all of the
biggest us keyclowns will be there.....i tell you what. you two
pinheads somehow conjole ole riley to go over there and tell all those
black guys they have to give up their equipment and quit keying up big
radios............then..........and only then,.......will i , gw
beckwith,......believe that you and the fcc are serious about 11 meter
enforcement.......

oh you think i would feel different if texas had a football
team....sir we have many football teams.....long ago twist, i
realized what football, basketball and all of that bullshit were
really about.....that is to enrich the pockets of a select few,
while tom , dick and harry pay for the expenses of the
venture.....tom , dick and harry in this scenerio if you haven't
guessed it yet are members of the john q public section and pay most
of the damn taxes.....i also realized twist that the best way to
follow sports is from afar.....think about it.....when a team is
in another city, it is not you having to pay to build them a new
billion dollar playpin every once in while because the greedy owners
pay the greedy players so much , they do not want to have to pay for
it themselves.....so....they threaten your fair town with such
nonsense as, if you don't build it we will leave.....who

cares......i ask you twist.......how is your life bettered by having the world champion tampa bay bucks in your area???? how??? i suspect not by much...so you brag.........well ok.........when was the last time some son of a bitch over at the tampa bay bucs organization sent you a check for caring about their organization????.....you know a guy said on the radio the other day, that he thought that people who run around talking about sports teams, etc, etc......should grow up and get a life.........think about it twist...it is your ass that is the target of these rich guys who prey on the cities about this sports stuff.....not theirs.......it takes money to make money and rich people don't like taking chances with their money......why not threaten a few gullable taxpayers into helping the 'city' buy, maintain or build a sportscenter for their overpaid and underplayed thugs.......by taxing them......a steady source of revenue.....and instead of the owner's money, it is your money that is used.....novel concept, wouldn't you agree..... and all the while you think that you somehow are apart of it and those tampa bay bucs are your team, but in reality you are not part of it and that team is owned by its owner and that is all.....come on in, twist......the water is hot.....damn that steel is getting hot......i am off the key.....

Well if they were wearing a "jock-strap" and
talking to "saucer-men" on their cereal-box
Star-Trek communicator I could suggest somebody
that most on the group would know. 8-))

I turned out great. A couple of extra teeth is all. I even passed my
entrance physical, and served honorably for 20+ years.

Anyway, that's what I like about you; you get all of your exercise
dodging the draft and jumping to conclusions.

i am grown up and i think most canadians are stupid.....and have
a stupid country full of illegal aliens......down here, we are still
free enough to speak our minds and can carry and own guns, which is
more than i can say for your pitiful little country.....you
pricks have always, and i do mean, always, been a stain on our
collective levi's good buddy....so there little dickie, ...put that
in your crack pipe and smoke it.....

well dougie is a product of his environment.....the hamsters
thought it would be a good idea to relax the entry requirements into
ham radio and then this type of twit is what they get.....case
closed.....the hamsters now need to get used the fact that they
will soon further increase the reality tv watcher population in their
ranks, when they eliminate the code requirements....and as that event
happens, little jerry and the rest of the do-gooders will have their
hands full policing these morons .....instead of whining an a cb
newsgroup about qrp good buddies talking on 10.....

How do i add talkback to the Galaxy DX55V?
I have tried the usual things like adding
a resistor from external speaker ground to
the PA ground like you do in the Cobras and
I have also tried a 68 ohm resistor from
ground to the speaker lead (I tried them one
at a time) but neither of these worked.
Thanks in advance for any help

When i press the transmit button on my cb rig the burner rapidly clicks on ans off and doesnt transmit. The only problem i can think of is that it might be something to do with the power supply which i have recently changed. My radio is an amstrad 901 and the burner is a zetagi 50watts. I am also experiencing loss of signal power from incoming signals when the burner is plugged in to my rig. CAN ANYONE HELP WITH THIS FRUSTRATING PROBLEM.

_
http://www.Bushnews.com

_
Also, I find it odd Bush decides to come down on the soldiers for expressing their personal views. Didn't Hitler use the same oppressive tactics? Does such animosity stemming from the Bush camp have anything with Bush losing the military vote? And why has he lost the military vote? Wasn't it he that taunted the terrorists to "Bring it on" while placing our boys in the wide open desert? Wasn't it he that proposed reducing the combat hazard pay from a paltry 225 per month to an even more insulting 150 per month? And wasn't it he that opposed the doubling of the death benefits (from the current 6 grand to 12 grand) paid to families of soldiers killed in HIS war? He sure can set an example when it comes to supportin troops. Oh well, at least Poindexter is being forced to resign for conflicts of interests. Meanwhile, the economy is in the tank, Bush takes a month long vacation, and American soldiers are dying each and every day since Bush claimed "liberation" of Iraq. Bush then offers us fuzzy math in order to claim the economy is in recovery. When one takes the unemployment factor, drives it up 5%, then lowers it by 1%, that is NOT a recovery, that is fuzzy math, and is the formula the current administration uses to fake and fudge their facts and figures so they can claim improvement.
The intangible war on terror must be going well. With no real manner in which to gauge success, we can be told every weekend the feds uncovered a "plot" by terrorists to attack us, and when it doesn't occur, Bush can cry "Lookie, I prevented it." What I do find amusing, is CNN and MCCallister polls over the weekend BOTH showed Hillary Clinton approval rating 2% above Bush. No wonder the Bush administration is filled with angry, freedom-hating fascists.

BTW, what happened to those NCI and ARRL tags you used to sign with in the past, Lelnad? Someone finally demand you stop soiling their reputations or did you finally realize on your own that using those as a sig when you're acting like a horses ass is a detriment to amateur operators everywhere, especially those involved with the ARRL. NCI is a joke,,,only an organization such as they can claim they seek to "preserve" amateur radio through abolishment of what ham radio was founded upon.

> > the arrl????? the american citizen????

Again, radio spectrum is controlled at the discretion of Congress and
regulated by FCC. As far as ham radio is concerned, for the most
part, the
licensed operators themselves have the obligation to police that which
as been
assigned by law to them. Most of us don't care what you do on the CB
frequen-
cies, but when certain ones decide that they can just invite
themselves along for the ride, that becomes a different matter! To
allow this to continue only
would open up radio to becoming useless on any band. If a group (in
this case,
truckers) decide to just start talking anywhere on any frequency, then
inter-
ference will prevail--even to the extent of loss of life.

and i ask you.....in
> > all seriousness.....how much harm is done when a hard working
> > trucker, talks on 10 meters.....

What's the harm in anyone talking to air traffic controllers? What's
the harm
in everyone just having a radio so they can call the police department
directly? It lies in training, discipline and the purpose of the
particular
service. The general public has not the ability to intermesh with a
particular
procedure and routine designed into a given radio service. Controlled

radio
services are there to accomplish particular tasks, whether it be to
respond to
a car crash, a bank robbery or just order a pizza for a crew. To see
what would happen, I only point you to the CB band where chaos
prevails. The Amateur frequencies, while often are used by the
rightful operators just for
QSOs, are also recognized as a valuable resource, used for
experimentation for
the furtherance of radio in general, and has proven to save lives. It
is also
wrong for people to usurp frequencies simple because they want to.
The reason
for this is the fact remains that control and regulations are are
necessary for radio's survival.

GW, What makes you believe we can't speak our minds? I can freely discuss topics like marijuana with employers without worrying about being fired. I can say I'm opposed to gay marriage without being locked up. There ARE restrictions on inciting hatred (as an example) which happens quite often anyways, but everyone has their day in court and you are free to think what you want.
As well, we can still own guns- you just have to get an F.A.C. (Firearms Acquisition Certificate) or whatever the government is pushing towards now. When I left the military I thought about getting an FAC just for the hell of it, but what would I use it for? Perhaps hunting, or if I lived in the rural areas (I'm from Alberta) protecting your livestock from coyotes, wolves, etc. In the city, that's not an issue.To protect ourselves on the street from criminals, we just don't need them. I hope that the reason Americans own guns is merely to assert their constitutional rights and not out of fear of walking down their own streets.
Yes, we have a lot of illegal aliens here and so do you, huh hombre? I know that you are trying to make a 9-11 connection here but you are beating a dead horse-and you know it. It's not up to Canada to determine who enters the United States, and it sure wasn't Canada that gave them flight lessons. Hopefully in the near future, you should be able to leave "the land of the free" on a vacation and smoke a nice LEGAL joint without fear of persecution. Perhaps you will eventually get similar freedoms in the States but until then our door is open, no hard feelings eh?

Look through the ebay auction archives within the last two weeks, there is
a guy in Petaluma, CA. (George) who does a great restoration job on
Siltronix radios, his name is george. Going rate for a really sweet
restored radio is between $225 and $275

On another note... I've just added the Siltronix 1011B manual to the
http://sonic.ucdavis.edu amateur radio page, free download section.

The page might look slightly different as I've been moving things around
into a more logical list.

Hey there,

Another shameless plug for the Swan - Siltronix 1011 web page which can be found at http://sonic.ucdavis.edu/siltronix

If you visit the main Amateur Radio Page, there are various Siltronix Manual downloads which are free. Some of the pdf type manuals require you download the free viewer from Adobe. Enjoy...

Six meters is booming over here. Everyone wants to get on six. I've already cut down an old 1/4 wave SS whip. Another tailgate fest this weekend, maybe I'll find a 5054 for a good price. There are nets on the local 6 meter repeaters. I can hear them on a scanner. >:

I still leave my CB on, but there is no one on it. They are all on 2, except for 3 or 4 that can't make the cut. One guy always uses his box and can't hear me because I only use the preamp. Oh well, I'd have to clarify his cheesy Galaxy anyway...

Taking a break from making an online newsletter, listing club meetings, hamfests, nets and other relevant info for the local ham community. I hear many on the air nets giving information. I'm trying to gather it all in one place for easy browsing.

Anyone that I know may email me for it's location.

On channel 2 AM you have to clarify his cheesy Galaxy? Come on down to my playgrounds,,,,,I never need clarified. Matter of fact, I haven't changed my settings in years and I get audio compliments almost everytime I key on AM. Sure glad I got one of them super loud Galaxies instead of one of the cheesy ones to be found in your neck of the woods.

> each other, sort of like encrypted type comms?

A tone (PL, CTCSS, tone squelch, et al) is a subaudible tone applied
to the signal to identify a transmission to the receiver. When you
transmit with a PL tone, the selected tone is added to the signal.
The receiver listens for the programmed tone, and unmutes when the
incoming signal breaks carrier squelch and the tone matches. You
will not hear any other signal that has a different tone, or no
tone at all. You may listen to all signals, whether toned or not,
by disabling your PL tones, my preferred method on a shared channel.

(FCC Warns Trucking Firms about Alleged Unlicensed 10-Meter Operation
NEWINGTON, CT, Jul 28, 2003--The FCC Enforcement Bureau has sent Warning
Notice letters to three highway transportation firms asserting that
drivers of some of their vehicles may have transmitted without a license
on 10 meters. All three notices allege the unlicensed operations took
place July 8 on Interstate highways in South Carolina.
Letters went out July 14 from FCC Special Counsel Riley Hollingsworth to
Jolly Roger Capital Ltd of Columbia, South Carolina, Tidewater Transit
Company of Kinston, North Carolina, and Shuford Lumber of Marion, North
Carolina. He warned all three firms that operation of radio transmitting
equipment without a license could lead to fines of up to $10,000,
equipment seizure and even imprisonment.
Hollingsworth cited "information before the Commission" that spelled out
each vehicle's highway location, license plate and--in two
instances--operating frequency (28.085 MHz). One of the Warning Notice
letters also identified the make and year of the vehicle. The alleged
offenses were said to have occurred when the vehicles were under way on
Interstate 77 or Interstate 20 in South Carolina.
Hollingsworth asked all three firms to get in touch with him to discuss

the allegations.)

>discretion of Congress and regulated by FCC.

>As far as ham radio is concerned, for the most
>part, the

>licensed operators themselves have the

>obligation to police that which as been

>assigned by law to them.

Again, this is absolute bullshit. I have no problem at all with hammies defending their turf, but do not for one second attempt to claim by virtue of a license a hammie is somehow required or "obligated" to police a damn thing. A hammie is no more "obligated" to police another by virue of a license anymore than a licensed driver is obligated to self-poice the roads. You make some good points at times, Jer, but what you claim above is a personal want, not a rule, law, obligation, or requirement.

>Most of us don't care what you do on the CB

>frequen-

>cies, but when certain ones decide that they

>can just invite themselves along for the ride,

>that becomes a different matter! To allow this

>to continue only

>would open up radio to becoming useless on

>any band.

But you "allow" hammies BEHAVIOR to run opposite of what you profess with nary a word from yourself concerning such. Certain hammie-lites do more to trash the hammie reputation here than any cber can possibly match, but you for some coincidental reason, remain silent against such hypocrisy.
Being relegated to google posting illustrates my position, perfectly, do you not think?

>If a group (in this case,

>truckers) decide to just start talking anywhere

>on any frequency, then inter-

>ference will prevail--even to the extent of loss

>of life.

Truckers? Aww gee, Jer! It's not limited to truckers..there are plenty of hammies breaking laws daily with their operation,,why the hell you think so many are hell bent on lying to the FCC and providing addresses other than where they reside? Ask Lelnad for his take on the situation and why they feel they are above the law,,he still hasn't informed the FCC of his current domicile.

_
GW@webhideout.com wrote: and i ask you..........in all seriousness........how much harm is done when a hard working trucker, talks on 10 meters.......

>What's the harm in anyone talking to air traffic

>tasks, whether it be to respond to

>a car crash, a bank robbery or just order a

>pizza for a crew. To see what would happen, I

>only point you to the CB band where chaos

>prevails.

That "chaos" is music to HF dxers ears.
Many feel there is more "chaos" due to infighting and the inability to organize among hammies than cbers. After all, concerning radio hobby, you almost never find a cber bitching and moaning,,it's always one of you beligerent hammies that feel cbers give a rat's ass about your ailments and gripes, many of which are self-created.

>The Amateur frequencies, while often are

>used by the rightful operators just for

>QSOs, are also recognized as a valuable

>resource, used for experimentation for

>the furtherance of radio in general, and has

>proven to save lives.

Yea, yea,,let's talk about saving lives. CB does it DAILY all across America on channel 19 on a regular basis. Guys like you sit around salivating waiting for a disaster so when a hammie responds, you can tout the benefits of the service and say "Look what this hammie did,,he WASN'T a cber". No one is slamming your precious hobby, Jerry. I wonder why you feel the need to create a defense against an imagined opponent.

>It is also

>wrong for people to usurp frequencies simple

>because they want to.

You said most of you don't give a damn what folks do on other bands, then you turn around and claim it's wrong for those to do so and that licensed amateurs are somehow responsible for policing those that do so.

>The reason

>for this is the fact remains that control and

>regulations are are necessary for radio's

>survival.

>J

Radio will survive,,what you need figure out is a plan for hammie radio to survive,,,,,the writing is on the wall and you are a dying breed. With attitudes expressed by several of the hammie-lites in here, some of you deserve what you get.

AM? I stay on sideband at all times. If I was on AM, I'd probably have to turn my ANL off to clear him up.

2080. FS: 2 Cb's for sale Sears Roadtalker and Uniden PC 76XL (older)

Newsgroup: rec.radio.cb
Date: 2003-08-04 22:33:48 UTC
From: john doe <panzertank@wwnet.net>
Message-ID: <1060035592.4838@axilla.wwnet.net>
Source record: 163612

I have for sale 2 CB radios.

1st is a Sears roadtalker Like new in the box Model 613811 (AM only!). Only thing done to the radio was the mod being clipped. Has everything minus mounting screws to chasis from the mounting plate. Looks like brand new from the past $40.00

2nd is a Uniden PC76XL. This is an older philippine model from the early 90's.Very loud radio! Has had the larger 1969 final installed with variable dead key installed in the deltatune knob. Radio has been alignent and calibrated using IFR service monitor. Cosmetically, i'd give it a solid 8. Some minor wear to the top and bottom cabinent from use. Asking $90.00 In the process of moving so I am not out on the boards very much. If interested, please reply email @ buyerdude666@yahoo.com if interested! I will be checking email periodically for the next 4-5 days. Thanks in advance!

i am not reaching for nuttin on the 911 thing.....i realize you
cannucks had nothing to do with that.....and i did not say it either
but you seem to be so willing to accept the world's
refugees.....sooooooooo.....all i am saying is why not accept
ours too and then you guys can do what you want up
there.....since you have absolutely about zero for a defense
budget, you can continue play acting as socialist
do-gooders.....and incidentally who says those idiots flew those
planes into those skyscrapers.....they made intricate turns before
crashing them.....their supposed flight instructors have
emphatically stated for anyone that is listening, that none of those
pinheads could poor piss out of a boot much less fly a plane of that
size and weight into a target such as those buildings.....you
say, well those buildings are so big....well they are but when you are
flying a plane like that, it is like hitting a needle on the
dime.....tell me,.....how does anyone after taking a few flying
lessons, hope to somehow fly boering 727's much less , crash them into

something....no, on that subject, i will have to say that something smells.....besides the buildings were built to withstand being crashed into by 707's.....and they crumble anyways.....hmmmm.....doesn't add up..... if you have seen the pics of those planes crashing into those buildings you will notice that most of the fire ball , which includes the fuel .....goes through the buildings and out the other side.....and in any case would have been burned up shortly, long before getting the metal in those buildings got hot enough to melt.....no, this situation does not add up in my book.....from where i sit, i think that it was done by radio control.....the arabs were patsies.....and used to blame this on.....so.....well so those that want such a thing, will continue to wrestle control of whatever freedom we have left to do what they want, which is.....one world government.....i read one time .....that there is not such organization as al quaeda.....it was just made up for the masses.....and let us not forget that bin laden's relatives.....are very close business associates with the bushes.....food for thought.....so have another labatt and put on your hockey helment and think this thing through.....mr gw beckwith is off the key.....

> rating 2% above Bush. No wonder the Bush administration is filled with
> angry, freedom-hating fascists.

i just wish bush would be himself.......he listens to the wrong
people.......if it was me,.......i would have gone in there and killed
anything that moved......that way you would not have these
problems.......what's the use of patrols anyways....that is when you
get bagged.........same thing in nam......and they are using those ten
cent rifle grenades of all things.......no wonder sadaam had
warehouses full of those damn things.......cheap, and
effective.........the

trouble is.......the army is supposed to kill people and that is all
they should have to do......now once that mission is accomplished then
you get out........but now they say we will be there for 5

years......man if i was in the army, and i
joined,..........technically i think you can resign these days.......i
would resign.......screw it.......it ain't worth gettin killed over a
bunch of ragheads that don't care about us or understand what is going
on anyways........we could have done all of this without sending in
one man........or heck what is wrong with just taking the oilfields
and living him to rule bagdad.........who cares.........it was all
about oil anyways.............it makes me sick.......and a army with
'feelings' makes me sick too.........and that kind of crap will get
you killed..............it was this feelings thing that got us to this
point.......if those punks knew that it would be hell to pay for one
american death.....they would not do this crap........but they know
that we will go through the legalities and all of that crap and we
want them to like us.......hell , i don't give a crap about
that.........liking is not the issue..........respect is the
issue......and if you had killed all of these thugs from the getgo you
wouldn't be having this problem. i think the bastards that ran that
stupid war, just got lucky the iraq's didn't put up a major fuss or
use wmd's.........if they had we would have major problems over there
much more so than now......and we still might......we are over there
right now, building permanent, i said permanent bases........in
iraq....of all places.........why?????? we don't get oil from that
area........so why????? and here we told those good buddies we would
be in and out...........no wonder there is discontent in the armed
forces......this is not what they wanted to do.........a just
war......hmmmm..........i think you have to say, that the term
........'just war' ....after what has happend and info coming
out..........you have to put that term on the table for
discussion.......sorry about that.............all i can say is i am
sick to death of electing lessor of two evils types.........i am sick
of it...........i would have to say that george w nixon is not my
first choice...........

Alan Lansburger wrote in message ...
>can anyone else hear you when you reply to someone else that has a ctcss
>tone, or just the people who have the tone installed in the radio can hear
>each other, sort of like encrypted type comms?

Those with it fitted and switched on will only hear people with the same CTCSS.
Those without CTCSS, or with it switched off will hear everyone - including those using CTCSS. Sets with it fitted may still transmit the tone when it is switched off, but they will receive all signals with or without CTCSS.

It doesn't hide you from those without CTCSS... it hides them from you.

The idea is that several groups may be using the same frequency, without hearing each other - so you only reply to the people you should. It could get confusing if you hear a message meant for the other group and, thinking it was directed at you, give a reply.

This sharing of a frequency works in situations where the transmissions are fairly short, with long breaks between. If used on CB, where people may chatter constantly for hours, two groups trying to use the same frequency will key over each other.

Regards,

Peter.

>zetagi 50watts.

Hi Graeme.

This happens when the coax connections are crossed over.
Check that the radio is connected to the TX socket and the antenna is
connected to the "ANT" socket (the amp output.

Another possibility is the power supply, specially if it has a current
limit. What power supply are you using, what is the rated current?

>I am also experiencing loss of signal power from
>incoming signals when the burner is plugged in to my rig.

If the amp is connected correctly, and the loss of signal is still quite
high, then either the amp or the patch lead being used may be faulty.
Is the amp new, or "pre-owned" (I like that term, used by some stores).

You should be aware that the use of a "burner" is illegal, and improving the
antenna is a better way of getting real gain. What antenna are you using,
can that be improved?

Regards,

Peter.

FCC Warns Trucking Firms about Alleged Unlicensed 10-Meter Operation

NEWINGTON, CT, Jul 28, 2003--The FCC Enforcement Bureau has sent Warning Notice letters to three highway transportation firms asserting that drivers of some of their vehicles may have transmitted without a license on 10 meters. All three notices allege the unlicensed operations took place July 8 on Interstate highways in South Carolina.

Letters went out July 14 from FCC Special Counsel Riley Hollingsworth to Jolly Roger Capital Ltd of Columbia, South Carolina, Tidewater Transit Company of Kinston, North Carolina, and Shuford Lumber of Marion, North Carolina. He warned all three firms that operation of radio transmitting equipment without a license could lead to fines of up to $10,000, equipment seizure and even imprisonment.

Hollingsworth cited "information before the Commission" that spelled out each vehicle's highway location, license plate and--in two instances--operating frequency (28.085 MHz). One of the Warning Notice letters also identified the make and year of the vehicle. The alleged offenses were said to have occurred when the vehicles were under way on Interstate 77 or Interstate 20 in South Carolina.

Hollingsworth asked all three firms to get in touch with him to discuss the allegations.

yeh and what is wrong with keying up on 440mhz. at 3:00 am and telling
the donut eaters to come out of their hiding places and go do some
damn work, the work that we pay them to do, instead of eating donuts
and sleeping......no , i don't see anything wrong with it......i think
it is funny.....ha, ha, ha.........just like i think it is funny that
truckers talk on your puny 10 meter band and dougie agitates on your
little two meter band.....i think it is funny , to key up a big mobile

right in front of the fcc offices, screwing with their receiving systems and tapes and shit and aim that baby right at their fucking antennas , doncha know......yeh, i think that's funny.,...ha, ha, ha.....i think its funny that you hamsters are having problems with contolling your power levels, and your bad language users...yeh i think it is funny.....dude you came on here with your crap, now you are going to get full frontal beckwith.....just lay there and enjoy the heat from this steel.....

"most canadians are true, but some are a little stupid"......

I do not want to get into an argument over a Pussy goverment that does
not allow their countryman to have handguns. I am DAM GLAD that
I live in a country where I am given the means to Defend myself..
Because you have the same type of idiot in canada AND all you can
do is yell cop. Would not you feel more comfortable with a handgun??

"when guns are outlawed, only outlaws will have guns"

Just My Opinion..

>bagged.........same thing in nam......

Yes, it was, and many share your view concerning this occupation that allegedly "liberated" Iraq.
Those that are shelling us by night are the same "friendlies" our troops see by day and who wave to them. Why else was the march to Baghdad so much easier than expected? It's all guerrilla warfare.

>and they are using those ten cent rifle

Mr. Mcferrin,

You sir are a prime example of why the world is going to "pot". You
simply refuse to believe that a new Christian would want to make
amends for all of the wrongs that he has done in the past. I am not
going to be number one on the
Darwin awards simply to piss you off.

Dave

Jesus was not an alien. I have it on good authority that he had two
arms and two legs just like you guys. But I think he had bigger balls.
He didn't hide behind a gun, he used his flame thrower that he kept
hidden under his cape. You know the "hell fire" that the Bible talks
about. I mean come on, how can you possibly think that he had big
bugger eyes, had grey skin, and flew
around in a saucer. Good grief. Thats quite a fairy tale.

Amateur Radio Newsline™ Report 1355 – August 1 2003

A NOTE TO THOSE WHO ONLY “READ” AMATEUR RADIO NEWSLINE(tm)

For those of you who only know of the Amateur Radio Newsline (tm) as a text newsletter we would like to invite you to listen to the audio version. This Amateur Radio Newsline (tm) script is actually written for the “spoken word.” It is recorded each by professional broadcasters and is available for private listening or rebroadcast over your repeater. Two methods of delivery are available: FTP MP3 or dial-in telephone. Please visit our website at http://www.arnewsline.org for a list of telephone numbers (you have to pay your own long distance charges) and links to our voice newscast. On site free FTP Downloads are available at our site by clicking on the newscast number at the top of the page.

Amateur Radio Newsline report number 1355 with a release date of Friday, August 1 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T. Amateur Radio helps solve a murder by tracking down one of its own. Get to know about the ham radio heroes involved in the hunt for a cop killer on Amateur Radio Newsline report number 1355 coming your way right now.

(Billboard Cart Here)

**

ENFORCEMENT OF A DIFFERENT KIND: AMATEUR RADIO HELPS HUNT HAM WHO KILLED MICHIGAN COP

Hams in Michigan were called on to help track down a cop killer after what should have been a routine arrest became a grusome homicide scene. It happened on July 6th. Amateur Radio Newsline’s David Black, KB4KCH, is here with the rest of the story:

--

Never in Michigan's ham radio history has there been a case like Scott Woodring's. It began July 6th. That's when Woodring, KC8JNG, a member of the

Christian Identity movement and described as a survivalist, shot and killed a Michigan state police officer. It happened while Woodring was being arrested for solicitation of a minor.

A stand-off ensues and lasts nearly a day. During a law enforcement shift change, Woodring manages to escape, triggering an extensive manhunt throughout western lower Michigan. That's when ham radio operators became involved, since it was suspected that Woodring had been using amateur radio equipment to communicate with other members of his group.

James Wades, WB8SIW, is Michigan's RACES Officer and Section Emergency Coordinator:

--

Wades: “I directed the EC for Newago Co. to establish an intercept peratio in the area and monitor seldom used frequencies in and about he VHF 2 meter band. And, additionally, we sent out a broadcast nouncemnt to selected areas to selected area RACES members thrughout Michigan, essentially asking them to listen for conversations between Mr. Wodring and whomever else he might speak with.”

--

That paid off. A ham in Holton, Michigan reported monitoring Woodring and another operator talking on the air. The intercept was reported to state police they then asked government agencies including the FCC to provide direction finding assistance to find Woodring. But it was a Friday night and police couldn't get any response from the federal agencies. So Wades says investigators turned to radio amateurs for help:

--

Wades: “We deployed amateur radio teams from several counties in the area, and had pretty much a continuous radio direction finding occurring throughout the weekend, with teams from from Kent, Ottawa and Musquogen Counties. We also had teams on standby in Kalamazoo County as well as the Civil Air Patrol team – which weren’t utilized, but it was reassuring to know that they were there”

--

Hams and the police knew the general area where Woodring was believed to be hiding. Wades says it was an eyewitness who ultimately led to Woodring being found:

--

Wades: “Mr. Woodring was discovered through a tip from a citizen who saw him essentially taking shelter in a non working vehicle. When Michigan state police officers approached, he leveled an assault rifle at them and he was subsequently shot to death when he refused t comply with orders or lower the rifle.”

--

Wades says police were hesitant at first to work with radio amateurs. But he says the hams' efforts made a powerful and positive impact with law enforcement agencies.

--

Wades: “When all was said and done the feedback has been incredabally positive. Tremendously good comments about the professionalism and the skills of the radio amateurs involved. And basically I think that they were somewhat – almost shocked at the capabilities and the skill level of our ARES and RACES members in Michigan, which, of course was highly complimentary”

--

Around 40 radio amateurs took part in the effort to help find Woodring. Wades says the hams involved coordinated their work with police carefully, even establishing a dress code for hams reporting on scene with investigators. The professionalism Michigan hams showed has given law officers a new appreciation for the kind of help radio amateurs can provide when it's needed.

From Birmingham Alabama, I’m avid Black, KB4KCH, reporting for the Amateur Radio Newsline.

--

In all, RACES members provided 494 staff-hours to the man hunt. Most of this was contributed during the 36-hour period when radio direction finding activites to locate Woodring were being conducted. (ARNewsline(tm) from lead provided at www.qrz.com)

**

THE FIGHT FOR OUR SPECTRUM: HAM RADO VS. BPL

If you think that the term Broadband Over Powerlines and its acronym BPL will never afect you, guess again. BPL could effectively spell and end to ham radio as we know it. This, if it is ever approved by the FCC and popularized across our nation.

Just how real is the chalange to the survival of the Amateur Radio Service? ARRL Southwestern Division Director Art Goddard, W6XD, gave some graphic details at last weeks Fort Tuthill Hamfest in Arizona based on test data collected by Ed Hare, W1RFI, of the ARRL Lab:

--

Goddard: “If you are an engineer, anywhere from 33 to 63 decibels increase in the noise level thatr you will see at your reciever due to BPL run in the power lines in your neighborhod. If you are into S-Meter readings, thats somewhere between an S-6 and 10 over S-9.”

--

For those unaware, Broadband over Powerlines is a scheme to give consumers and businesses high speed Internet connections using the existing power distribution grid. This would put the power providers in the position of also being broadband internet providers as well. The problem is that powerlines are not shielded. They will act as much like giant antennas as they will a closed carrier of the broadband connection. In other words, whatever is on the power lines will be radiated and heard by your ham band reciever. And Art Goddard says that the Broadband Over Powerline signals will occupy the spectrum from 2 through 80 MHz, meaning every band from 75 meters through 6 meters will be affected.

According to Goddard, BPL has the backing of the White House which views the increased use of unlicensed devices as being good for the U-S economy. He also notes that the FCC – which is supposed to be neutral and regulating in the public interest, is – in this case -- actng like cheerleaders for the proposed service.

Goddard says that this is an issue that the ARRL is keeping a very close eye on. He also indicates that the League may soon be asking ham radio operators to lend their voice in opposition to BPL. (ARNewsline(tm))

**

RESTRUCTURING: NCVEC FILES TO END CW TESTING IN THE USA

The National Conference of Volunteer Examination Coordinators has filed a Petition for Rule Making before the FCC to end Morse testing in the United States. In its July 29th request, the NCVEC asks the FCC for an immediate end of CW testing of applicants.

The NCVEC request is based primarily on the action taken in Geneva at last months World Radiocommunications Conference. At that time, Morse testing as a world standard was abolished, leaving it to individual nations to decide whether or not to continue to administer CW exams.

The NCVEC petition concurs with the WRC findings. It notes an appearance that most of today’s radio amateurs want to communicate using voice. Because of this, the NCVEC says that it makes no sense from a regulatory standpoint to require hams to be Morse proficient when the greater majority of radio amateurs show no desire to use the mode. The petition also notes that the future of the hobby now encompasses many new modes that were undreamed of only a few short years ago. It adds that while manual telegraphy is a noble part of Amateur Radio’s past, it is no longer the services prime emission mode.

The NCVEC approach will still requires all applicants for an Amateur Service license or upgrade to pass the current written exams. Only Morse testing would be eliminated.

As we go to air no Rule Making designation has been assigned to this request by the FCC. The full text of the petition can be found on our website at www.arnewsline.org (ARNewsline(tm) from NCVEC release)

**

HAM RADIO TESTING: QPC RECALLS QUESTION

Also from the National Conference of Volunteer Examiners Coordinators word that its Question Pool Committee of has withdrawn question T5B04 from the Element 2 Question Pool. This, effective July 27th. This question is withdrawn due to the changes in Part 97 of the Amateur Service rules dealing with the new 60 Meter amateur allocation. (NCVEC)

(5 sec pause here)

**

HAM SPECTRUM: ARRL & CQ PRESENTS A PRIMER ON 5 MHZ

And speaking about 60 meters, want to know just about everything there is to know about how to operate legally in this new 5 MHz spot frequencies? Walk, run or drive to your news stand and buy a copy of the August issues of both QST and CQ Magazines. Then go home, settle down and read the articles titled 60 Meters Frequently Asked Questions by Rick Lindquist N1RL and Ed Hare W1RFI in QST and Getting Ready For 60 by Gordon West, WB6NOA. Both are a wealth of information on how to approach this rather specialized allocation and handily compliment one another. We asked Gordo to explain what readers will find in his:

--

West: “One of the things that my CQ Magazine article talked about was the Amateur frequencies And tuning in. There was allot of confusion about what exact frequency one uses for upper sideband on the 60 meter band. As long as everybody remembers that 60 meters – 5 MHz – point 5 -- all of the upper sideband frequencies end with point 5.”

--

And why did her write the article?

--

West: “When I first heard about the band it immediately came to mind as channelized operation that many new hams are not used to. Well, growing up on 10 meter FM as well as 6 meter FM, I knew what channelized operation was all about. And the key word is “sharing.” There’s no QSY'ing – at least not easily on the 60 meter band beyond the 5 channels, so its going to be up to all hams to sort of take turns in using this exciting 60 meter – 5 MHz band.”

--

Where Gordon takes the story telling approach, Lindquist and Hare present their material in pure Question and Answer form. A style of writing that computer

enthusiasts call a FAQ. That's an acronym for the words "Frequently Asked Questions" and the answers that they provide is fact filled, precise and right to the point.

Taken together, "60 Meters Frequently Asked Questions" and "Getting Ready for 60" are the most complete operating guide for the 5 MHz band penned to date. Hams contemplating operation on the five channels that make up the 60 meter allocation would be well advised to read both before hitting the transmit switch.

For more information about subscribing to CQ, visit www.cq-amateur-radio on the world wide web. You can join the ARRL, support its work and begin receiving QST by signing up at www.arrl.org. (ARNewsline(tm))

**

THE WAR ON TERROR: TWO HAMS KILLED IN IRAQ

Two recent casualties of the war in Iraq were amateur radio operators, one American and one from Sri Lanka. The ARRL Letter reports that Specialist Jon Fettig, KCZ0HSQ, of Dickinson, North Dakota, was killed in an ambush on July 22nd.

The following day, Nadisha Yassari Ranmuthu, 4S7NR, an International Red Cross aid worker, was killed and his Iraqi driver was wounded after their vehicle, marked with the Red Cross emblem, came under fire south of Baghdad. Ranmuthu was 37 and well-known in the Sri Lankin ham radio community. (ARRL)

**

ENFORCEMENT: HAM TOLD HE MUST RESPOND TO FCC QUERRY

A California ham has been told that he had better respond to an earlier FCC letter to him regarding a pair of uncoordinated repeaters that he allegedly operates. Otherwise it could cost him his ham ticket. The agency's Daryl Duckworth, NN0W, explains:

--

Duckworth: "The Enforcement Bureau has sent a warning letter to WA6SEK, Thomas De Lasaux, of Stockton California, concerning uncoordinated repeaters on 224.660 Mhz and 441.275 Mhz. There has been no response to a letter of May 5th where he had 20 days to reply. He is being afforded an additional 20 days to respond."

--

According to Duckwoth, if there was no resolution by July 25th, the agency planned to initiate enforcement action against WA6SEK's Amateur Service license. Its now past that date and we are awaiting word from the FCC as to wheter or not De Lasaux has filed the required reply. (FCC, RAIN)

**

ENFORCEMENT: TRUCKING COMPANY WARNED ABOUT UNLICENSED 10 METER OPERATION

Also receiving a letter from the FCC is the Tidewater Transit Company, Inc. of Kinston, North Carolina. This one warns the company to stop using the 10 meter ham band for its communications or face some rather severe consequences.

In his letter to Tidewather, the FCC's Riley Hollingsworth notes that information before the Commission indicates that a 2002 Volvo truck belonging to Tidewater and bearing North Carolina license plate LK 4130, was the source of radio transmissions on the Ten Meter Amateur Radio band on July 8th. This while it was driving on Interstate 20 near the city of Lexington, South Carolina.

The Letter warned Tidewater that continued unlicensed operation could bring with it a fine of up to $10,000. The owners of Tidewater Transit were also instructed to contact Hollingsworth to discuss the matter with him. (FCC)

**

RESCUE RADIO: HAMS TO THE RESCUE AS CELL PHONES FAIL

Interlinked emergency repeaters played a key role in providing communications during the recent Arizona wildfires.

As learned at last weekends Ft. Tuthill Hamfest, radio amateurs in Navajo County set up repeater links to allow contact between the Red Cross communications center and a number of evacuation sites. This, after it was found that cellular telephone coverage across the area was inadaquite.

The hams stepped in when the walkie-talkie feature of the cellular telephones failed to operate as advertised. The reason appears to have been the small number of relay sites available in the isolated areas where the fires were burning.

The hastilly assembled Amateur Radio relay system along with existing high level Amateur service repeaters are reported to have performed flawlessly. This made possible an ongoing exchange of vital evacuation information. (ARNewsline (tm) from information gathered at Ft. Tuthill Hamfest)

**

RESCUE RADIO: E-911 KIND OF ON HOLD

A lack of funding from cash-strapped state and local governments appears to be slowing the rollout of enhanced 911 services. And in some areas it has put the new wireless emergency phone location service on what appears to be an indefinite hold.

--
Under FCC regulations, wireless companies were required to respond to 911 center requests within six months by providing technology that can locate any individual on a given wireless phone networks who is using a phone equipped to gather information from the global positioning satellite system. This technology lets emergency operators locate cell phone users in need of assistance, but only one in ten emergency call centers has access to it.

But John Melcher, who is the president of the National Emergency Number Association says that moneys earmarked for Enhanced 911 are being spent on other needs. In a recent press statement Melcher charged that some states have diverted millions of dollars
in Enhanced 911 funds collected from consumers and have used the money to subsidize budget shortfalls. This says Melcher puts the public in danger, adding that moneys earmarked on customer billing for Enhanced 911 services should be spent only on Enhanced 911 and nothing else.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

The FCC set specific deadlines for implementing this new service back in 1966. To date, many providers have yet to meet that implementation goal. (Published news reports)

**

RESCUE RADIO: THE INTERNATIONAL AREN NET

Still with rescue radio and emergency communications news, word that the Irish Amateur Radio Emergency Network takes to the air for its regularly scheduled drill session the first Tuesday of each month. The net is at 21:45 local Ireland time. Thats pretty close to UTC, with the net operating on 7 point 043 Mhz on SSB. (Q-News)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

EMERGING TECHNOLOGY: WI-FI SPEED INCREASED 4X

The most widely used wireless local area network protocol, IEEE Standard 802.11, also known as Wi-Fi, was extended last month to make it four times faster. The CGC Communicator reports that the new standard, IEEE 802.11g transmits data at up to 54 Megabits per second. Thats up from 11 megabytes per second as was called for in Wi-Fi standard 802.11b. (CGC Communicator)

(DO NOT READ: CGC)

**

INTERNATIONAL - ASIA: NON HAMS INVADING THE 7, 10 AND 14 MHz HANDS

The increasing use of more frequencies on various ham radio bands by the Indonesians and other South East Asian non amateurs for their personal or business traffic, is becoming a very serious problem. Q-News reports that the

Indonesians are using the lower 40 kHz of 40 meters, and frequencies around 14 point 100 MHz in the 20 Meter band most of the time.

Nor have they spared the 10 MHz allocation. There unlicensed oprators are regularly heard in the 10.0 to 10.1 MHz segment which primarily carries international air traffic control communications.

Q-News notes that this is a very serious situation. One which could endanger the lives and safety of air travelers in ITU Region 3 and a situation that needs to be to be dealt with quickly at the highest levels of international diplomacy. (Q-News)

**

INTERNATIONAL - UK: BBC HELPS THE BLIND

The British Broadcasting Company is playing a crucial role in developing new radio equipment that could help increase number of visually-impaired people working at the organization. Across the UK, BBC local radio stations are converrting from analog to digital equipment. The digital equipment is designed to make life easy for full-sighted broadcast journalists, using a visual touch-screen system, which is why it needs to be adapted for visually-impaired people.

Now comes word that Claire Jennings, who is the the BBC’s Disability Advisor for Technology, has been working alongside technology company Calrec. This, to design a digital radio broadcast mixing console that is user-friendly for visually-impaired radio producers

The BBC has spent the past few months working with Calrec to adapt the broadcast desk and with BBC Technology to extend the touch-screen control system so that it can convert text into speech and be controlled using a standard keyboard. As well as controlling sources to faders on the Calrec, the BBC system can control most other hardware in a similar manner.

The entire story may be found in cyberspace www.bbctechnology.com/newsarchive4.htm. (Media Network)

**

SPACE: NASA TEAMS WITH LOCAL LIBRARIES TO DELIVER -- SPACE

NASA and the American Library Association have partnered to create a one-of-a-kind interactive space research exhibit. This, as part of a new program called NASA @ your library.

The unique exhibit will tour 120 public libraries in five regions across the nation for the next two years. It will feature special presentations specifically created to expose people of all ages to NASA research in the areas of health, home and transportation, agriculture and environment, and commerce.

The program was recently launched at the Enoch Pratt Free Library in Baltimore. NASA @ your library was created to inspire more participation at public libraries, raise awareness and encourage interest in science. (NASA)

**

CONTEST CALENDAR: FISTS C2C IN SEPTEMBER

Mark September 13th and 14th on your calendar for the third outing of the annual Fists Coast to Coast contest. This year the contest will run a full 24 hours beginning at 5 P.M. Pacific Daylight Time on September 13th and concluding at 5 P.M. on the 14th. That corresponds 0000 to 2400 UTC on September 14.

This year the rules are easier to understand and the sponsors say that there is the potential for higher scores due to the use of multipliers. The URL for rules and awards is complex and appears in the print edition of this report. If you have questions, please e-mail them to Paul Beringer NG7Z at fistsc2c@yahoo.com. On-line information is at www.tomochka.com/k7fff/fnw_c2c03.html. (FISTS)

**

DX

In D-X, word that two separate groups will be operating from Swaziland through the 3rd of August. K4SV and VA7DX will be active as 3DA0SV and 3DA0WC. Four South African operators will be on as 3DA0DX between the same dates. QSL each group as directed on the air. (GB2RS)

**

THAT FINAL ITEM: ARNEWSLINE TAKES YOU TO A HAM RADIO BALLON LAUNCH

And finally this week, take a listen to this:

--
“15,790 feet. Course 44 degrees moving at 10 miles an hour.”
--

That’s the report of one of the controllers tracking a high altitude ham radio balloon launch that took place Saturday, July 26th at the Fort Tuthill Hamfest just outside of Flagstaff Arizona.

The launch was sponsored by hams belonging to Arizona Near Space Research. Brian Bingham is a Physics teacher from Deer Valley High School in Glendale, Arizona, who came out to take part in the launch. He says that many of those assisting are also educators who want to bring space a bit closer to their classrooms:

--
Bingham: “Most of the people you see out here helping are that group and a group of Arizona high school teachers that are going to be taking on some of the balloon launches. They will have teams from their schools do balloon launches through the NASA Arizona Space Grant.”

--

Bingham, who was a radio amateur many years ago described the system being readied to be sent aloft:

--

Bingham: “You can see a small package down here. It was built by one of the teams from a workshop and contains temperature sensors, humidity sensors, a small still camera, solar cells all in something just a little over a pound in weight. It has telemetry equipment with GPS position via satellite and transmits it back so that we an track it on the ground and recover the equipment.”

--

And how high will it all go?

--

Bingham: The balloon will go up to somewhere in the neighborhood of 100,000 feet. The balloon will also swell to somewhere about forty feet in diameter before it finally bursts. And then the parachute will bring it back down to Earth.

--

Brian Bingham says that his students will soon be choosing a project of their own to launch to the edge of space on a future balloon flight. It will be another educational experience made possible through the cooperative efforts of NASA, the educational community and ham radio. (ARNewsline(tm))

In reality, the actual drift from cold start to full warmup was not bad.

There were a number of us adding special reverse temp caps which kept the
drift within 1khz, not too bad.

It is/was an Amateur Radio with CB band receive capacity.

The range on a 27 MHz CB walkie talkie is so poor, to be useless.

FRS radios will go as far or farther and be lighter and clearer.
Some even have weather band (162.4 to 162.55 MHz) built in.

> Cuz they suck used cock. Try MURS or FRS.

That's one hell of a graphic!!!

What in the hell is bush doing, giving 15 BILLON
for aids to Africa , when they are breeding like rats, when we need help
here in our own country. Unemployment is high, health care is hard to get,
jobs is going to Indiana, and we here cannot afford health care. That's
right, lets take care of the world, and hurt our own people.
He is just wanting the black vote at all cost.
Powell has a point, where is all that WMD

> damn work, the work that we pay them to do, instead of eating donuts
> and sleeping......no , i don't see anything wrong with it......i think
> it is funny.....ha, ha, ha.........

Just shows your ignorance on radio in general. As to the cops, their
discipline is up to sergeants and supervisors just as it is in any
other business. Stand around the proverbial water cooler long enough
and see what happens.

just like i think it is funny that
> truckers talk on your puny 10 meter band and dougie agitates on your
> little two meter band.....i think it is funny

You read what "dougie" did and he got popped for it. And the truckers
are getting hit now for doing it, and the end result will be not
funny, either.

.....like changes in the current law to allow local DOT
officials to
reap fines and seizures at weigh stations and truck stops. The FCC
lawyers
are looking very closely at ways to tighten up the law concerning
"export" radios--choke off the supply, as it were. The volunteer
monitors are only
one part of the overall efforts to deal with it. Sadly, many people
who "think
it is funny" don't see how it can adversely affect them in the future.
But be-
cause a few have decided to make themselves the 'kings' of 'reddio'
all will
suffer in the end.

, to key up a big mobile
> right in front of the fcc offices, screwing with their receiving
> systems and tapes and shit and aim that baby right at their fucking
> antennas , doncha know......yeh, i think that's funny.,...ha, ha,
> ha.........

This is the very thing I was talking about in my original reply. In
order to
make up for lack of cranial and phallic capacity, the only thing the
less inia-

ted can think of is how to become "big" in some other way. To them,
"that thar
BIG reddio thar, mercy me thar" is the whole key to the effectiveness
of radio
itself. Why? Because it is all they have the ability to know. It
still comes
to training and discipline and study. Alas, some will never grasp the
entire
scope of radio--it'll always be 'reddio thar".

i think its funny that you hamsters are having problems
> with contolling your power levels, and your bad language users...

You'll have to explain that first sentence. As to power, I rarely have
any trouble communicating where I need to with 100 watts or less.
Again, it demon-
strates little you understand about E F F E C T I V E communications.

It is STILL illegal to use foul language via radio. Words like
"damn", "hell",
are OK. Profanity is actionable for words that describe in the
vernacular (like the word you used below) that describe sexual or
excretory functions and
can bring fines, revocation, or seizure if warranted. Thinking that
they had the "right" of free speech, some hams have found that their
speech can bring
consequences. And rightly so, AFAIAC.

J

> Now you're giving away way too much information...

oh really ....well i talk to the pile occasionally.......last
time i did , i was kicking it pretty good....matter of fact i had bear
country on hold...........and along comes jambo and tries to jump on
my back.......well needless to say i told that duck to standby and get
out of my air space and proceeded to stomp a electronic mudhole in his
goat smellin behind and walk it dry.........

ps ....lots of security occifers are hams didn't you know
that??? they do it because they like to talk on the radio.....besides
it gets boring out on those guard post.....heck al quaeda might try
and sneak up on them while they are talking......that would not be
good.....we used to call them barney fifes..........

The American Comedian George Carlin put it all very well.

Here is what he said:

"When it comes to bullshit, big-time, major league bullshit, you have to stand in awe of the all-time champion of false promises and exaggerated claims, religion. No contest. No contest. Religion. Religion easily has the greatest bullshit story ever told. Think about it. Religion has actually convinced people that there's an invisible man living in the sky who watches everything you do, every minute of every day. And the invisible man has a special list of ten things he does not want you to do. And if you do any of these ten things, he has a special place, full of fire and smoke and burning and torture and anguish, where he will send you to live and suffer and burn and choke and scream and cry forever and ever 'til the end of time!"

"Environmentalists estimate that, at the present rate of consumption, the world will have depleted its present supply of bullshit by the year 2005. Increasingly, synthetic bullshit is seen as the only answer. Therefore, the leading religions, in cooperation with big business and the major political parties, are working hard to beat the deadline."

"Who can I convert?" "Let's go to this country and make them christians." "Wear this." "Do that." "No, don't worship that way. Worship this way or I'll kill you - for the good of your soul, of course." Meanwhile, followers of Eastern religions are sitting in the middle of their minds, experiencing a bliss and a level of consciousness that Western man can't begin to approach. Christianity is all external, all material. Gold. War. Murder. The big churches operate, morally and economically, just like the big corporations. Yet they don't pay taxes. Let them pay their fair share, those fucking religions."

"And the belief that there's a man in the sky watching us, watching everything we do, is so ingrained: First thing they do is tell you there's an invisible man in the sky who's going to march you down to a burning place if he doesn't like you. If they can get you to believe that, it's all over. Before you're six years old, they've got you thinking that, they've got you forever on anything else they want. There's no real education. It's an indoctrination training little producers of goods who will also be consumers of goods. Some will be on the producer side, and more will be on the consumer side. But you're all being trained to be a part of this big circle of goods being pumped out and everyone buying them and everyone going to work to help make more of them for other people to buy."

greetings Dave:

since you have the extra gear you are giving away, why not send me a radio to replace my 756 you got,.. my address is still good on qrz. so, send me , heck, just about any radio, as long as its decent, and working and we will call it even, and a lesson learned.

N5XXM, Ken.

If you were completely paranoid like gw, probably yes. There is little need for "protection" if the crime rate is low. Besides, what makes you think gun ownership is illegal in Canada? You don't think that mental case knows what he's talking about, do you?

>he's talking about, do you?

NO! BUT I can remember going over to canada many times and if I were
lucky I would get a customs agent who new how to fill out the paper
work to take custody of my handguns until I came back to the USA.

They were not very knowledgeable about the custody form. They would on
occassion try to sneak through the form that says you are surrendering
them to the Crown.. Screw the crown.

If you guys are lucky they may let you keep black powder muzzel
loading Long guns.

Like Sheep to the slaughter.

Back in the 1930s or 40s a federal law was enacted that made Automatic
Weapons a federal offense to possess without a 3rd class firearms
dealers license. MANDATORY 20 year sentence for possession without
the license. Any Felon can go to Miami or Toronto and within 24 hours
find somebody who will sell him an AK47, FULL AUTO.
FELONS do not care about Anti Gun Laws.. and the canadian goverment
won't even let you have a handgun for self protection.

Your goverment must be composed of gutless frogs like the cowards from
their homeland who wussed out when we went after the Iraqi's..
After the war they want to run things. Screw them..

Just My Opinion

Bob

Just thought you might like to contact the trucking company and see if they could get that driver to help you find the 10 meter band.

Yea,, I've been doing some long distance listening and eavesdropping on
six, myself.

>There have been openings on 6 lately.

>I still leave my CB on, but there is no one on it.

Must be on the wrong channels. My DX is rockin' almost daily,,...you can
listen to the freeband without breaking your vow of hammie celibacy
while seeking to abstain from breaking rules. <g>

>When the Mexican heterodyne is there, I'm

>not.

>Galaxy anyway...

On channel 2 AM you have to clarify his cheesy Galaxy? Come on down to
my playgrounds,,,,,I never need clarified. Matter of fact, I haven't
changed my settings in years and I get audio compliments almost

everytime I key on AM. Sure glad I got one of them super loud Galaxies instead of one of the cheesy ones to be found in your neck of the woods.

>AM? I stay on sideband at all times. If I was on

Cool beans. I contributed to a hammie site for a solid year. It's up and running strong, now.

>It's all good...

>Anyone that I know may email me for it's

>location.

BTW, Hunter absolutely rocked!

>Send a CD, I don't do tapes. Zip it up in

>MP3's. Fit the whole show on one disc.

Awww,,,man, you're light years ahead of me. I still listen to Fillmore audience tapes but on the proper equipment,,,lately Denon and Akai (I'm not much of a Sony fan)...I guarantee your ear can't tell the difference....maybe Healy, Raccine or Cummings can, but the average (if such a thing exists) audiophile from the crowd from which we speak usually can't. Some friends still use the Sony D3 for recording,,how's THAT for a dinosaur? Something about crowd comments interspersed with the muzak the way it was......raw.......live,.... unedited,,,,unadulterated.

I've got one I've downloaded called Bobby's Backyard. It's definitely an audience tape. I was drumming to some of it, and he lost his timing more then a few a times. I had to pick it back up when he started to play again. There are crowds, dogs and airplanes! I like when he said, "Shut up, mutt."

The sets are longer then an 80 minute CD, so I have to listen in MP3.

What's that got to do with anything? No country in the world will let you
bring in weapons as a visitor, much like visitors to the US are not allowed
to carry weapons.

As I pointed out before, gun ownership is perfectly legal in Canada. Don't
make up stuff as you go. As far as felons buying AK47's in Miami, when was
the last time you or anyone you know was assaulted with it? An overwhelming
majority of assault and property crimes are committed with simple or no

weapons. The AK47 parable is an NRA bedtime story for little DC congressmen.

> Your goverment must be composed of gutless frogs like the cowards from
> their homeland who wussed out when we went after the Iraqi's..

"You" went after the Iraqi's (sic) only because that was the order that came from Tel Aviv. Wolfovitz and Rumsfeld arranged it and Cheney and other assholes got rich(er) on the deal. Ordinary Americans got fucked in the process and young boys are still dying there as a result of the bullshit propaganda about a Nigerian nuclear connection, non-existing WMD's, alleged and laughable imminent threat to the US and a made up Al Qaeda connection.

> After the war they want to run things. Screw them..

You think there's going to be anything similar in North Korea which actually *is* a threat to US security, unlike the stupid-ass Ude and Kuse? No fucking way - they're not a threat to Israel.

wrote:

>You weirdo's on alt.drugs.pot knock it off!!!
>
>Dave

Dave, get a clue! YOU posted HERE at ADP, not the other way
around. The "wierd messages" you refer to were, therefore, earned and
deserved. As both a fellow ham radio enthusiast *and* cannabis smoker,
I do know what your "free gear hamfest" comes across as. One word.
SPAM! You've probably been plonked by other amateur radio operators in
the ham newsgroups as well as here at ADP.
In short, you broke a few cardinal rules of Usenet; don't post
personal information and don't post off-topic! Yes, I am well aware
that a quick trip to www.qrz.com will yield the name and address of
anyone who posts their ham callsign (notice I don't post mine, for
obvious reasons!), but that fact is known to few others outside of the
hobby of ham radio and shortwave listening.
So, my advice to you is skip posting ham radio articles to
alt.drugs.pot. You don't see me posting articles on the ham groups,
like "I irradiated my Sensimillia crop with 1294 MHz at 1 KW and
produced the most potent strain of pot known to mankind!", so just let
it go, Dave. Post in on-topic groups. And don't forget, Dave, I walk
among you. I've been licensed in both amateur radio, and commercial
radiotelephone (broadcast, radar, and FAA endorsements) for more years
than I care to recall. I've also been a cannabis activist for a long
time, as well as a frequent smoker for both recreational and medical
reasons.
To my fellow amateurs who have read this post, my apologies if
my off-topicness has upset anyone. This post is to show Dave the error
of his ways in the most friendly and direct way possible. I'm sure he
has learned a valuable lesson today and will go forth and sin no more.
To my fellow smokers here at ADP......well.......smoke 'em if
you got 'em!

Agreed. They are giving away the family farm and everything else. It's no wonder we are in the hole and now our national debt is almost 7 trillion dollars which I don't see how it will continue indefinitely. It's just like the national deficit for this year being a record 455 billion. The politicos are running us in the ground a little bit every day just like Nero fiddling while Rome burned. We shouldn't be babysitting the rest of the world and not to mention the cronies and the oil supply. How come gas prices went up 20 cents in my area just this week and others I have talked to say theirs is up at least 10 cents. Makes one wonder what the hell is going on considering that this war would help to lower prices by increasing supply. 40 something million people don't have basic healthcare and more could lose the whole farm if they lose their job or benefits. Its a travesty of justice when you have people who have such a high disregard for the common person of the nation.

It is hard for dickieboy to tell where the laughter is aimed,
after all he can't even find the 10 meter band. That trucker
could learn him a thing or two.

I doubt that the driver knew he was in the ten meter band, only that he was on a quiet and otherwise unused frequency. Maybe if the whining hams would USE ten meters the truckers wouldn't? Ya think?

Good old JJ, the reliable (but stupid) one-trick pony; you seem quite proud of your comprehension disability. Haven't you yet figured out that everyone is laughing AT you, not with you? I've never had a problem finding the 10 meter band; it's just above the 11 meter band. Duh! (BTW: Stupid repetition does not make facts, whether it's you, Aanal Aaron, or Georgie-girl blathering.)

Open mouth, JJ; it's time to change feet again.

well monte i don't know why you persist in typing what you perceive a
cber to talk like but do what you have to do.......my advice to you is
to go back to the misc.truckers newsgroup and file your complaints
there........and sir i am real impressed you build your own
antennas......i build my own amps.....so there mr smarty
pants..........and guess what.........you hamsters elmered me
too.......ain't that a kick in the pants........and i don't have any

letters by my name and i do the same thing you guys do and i don't have to kiss uncle's ass.....oh by the way.....i have a icom too and it is a good radio....talks anywhere from 500 to 30 .....and i even talk on 28.085 too...he, he ,he.....

> > >
> > >
> > >
> > >
> >
> >
well let us just face facts shall we.....bush won the election on
name only.....no one really knew who he was, except maybe texans and
even here he was a paradox.....you never really knew where he
would come down on a issue.....he got votes because his name
recognition was very high since his father was president
also.....and people were sick and tired of clinton and his
crap.....at least some of them.....and i think bush jr was set up
for this from the beginning.....going to yale and

harvard......coming back ....hanging around, playing like you are in business.....waiting until the time is right.........then all of a sudden runs for governor and wins....name recognition in this state was already high since as limbaugh will say about others, his dad never worked for anyone except the government.........sooooooooo,......now he plays governor for a while...waiting..........waiting..........until the time is right..........and they figured it was , after clinton kept shooting himself in the foot....so he runs and since his brother is governor of florida and he also won that position off of name recognition...........you see, they knew in order for bush to win the presidency they had to have florida.........well what better way to insure this, than to have your own kin, running the show down there..........so he has 2 out of the big three.........texas, and florida.......forget cali..........soooooooooo now he is set up to run for pres and does......and he wins by the skin of his teeth.........so now ....the big plan starts coming together.........this guy.......i tell you.......sometimes i see the real him..........but to me, he listens to the wrong people, puts his candidacy ahead of the people of this country.....and does what is good for him and not for us.............he has a good personal life, and that is good......but he is weak......i want someone that does what is right for the people of this country and is not ashamed about it.............and says what he means and means what he says...........and you have to go back a long way to see presidents like that............also that brings to mind why we need term limits for congress..............

ps....it is not government's job to provide health insurance........to anyone.........

>trillion dollars which I don't see how it will

>continue indefinitely. It's just like the national

>deficit for this year being a record 455 billion.

>The politicos are running us in the ground a

>little bit every day just like Nero fiddling while

>Rome burned.

That truly is a great analogy.

>We shouldn't be babysitting the rest of the

>world and not to mention the cronies and the

>oil supply. How come gas prices went up 20

>cents in my area just this week and others I

>have talked to say theirs is up at least 10

>cents.

Hmm,,you noticed, too, huh? Perhaps the entire country is beginning to
notice...even some of hard-core conservatives are distancing themselves
from Bush if not downright denouncing him.

> Makes one wonder what the hell is going on

>considering that this war would help to lower

>prices by increasing supply. 40 something

>million people don't have basic healthcare and
>more could lose the whole farm if they lose

>their job or benefits.

Yea,,,dont forget,,first it was a "liberation" of the Iraqi people. We
didn't buy that bullshit they were selling so they changed the fare and
called it "WMDs". We bought it. When the menu came, it wasn't what we
ordered. Now, per the Bush regime, they no longer refer to it as the

hunt for "Saddam's WMDs",,,nope,,,they semantically admit defeat with the now-popular "Search for Saddam's PROGRAM".....see,,a program is much easier to find than actual WMDs. We also "liberated" the Iraqi people to implement what they wanted all along,,,an Islamic state free of western influence..gee,,and it only cost the trashing of the economy and how many dead Americans? Speaking of Americans without healthcare,,,,,,,,many conservatives have traditionally held that government managed/provided health-care is a form of welfare.......yet, as you well know,,we provide health care to the Iraqi people just for the asking,,do we not? Occupation of a foreign land with irresponsible no-account spending is NOT a conservative trait.

>Its a travesty of justice when you have people

>who have such a high disregard for the

>common person of the nation.

Yes it is. He showed his true colors with his fascist "Either with us or against us" disgusting mentality. His oppression against those who would dare express one of the most cherished American birthrights we have: the right to dissent and freely speak out.....is the most UN-American and UNpatriotic a leader of the free world can do,,,those comments do not merely undermine our freedom, they mock it...this is the guy with the plan for "Peace through chaos"...but I have a feeling we haven't seen anything yet. Think I'm bluffing? Ring those words through google....we are living in scary times.

It's not the governments job to do a damn thing but serve and protect. Since they fail miserably at both, I want to see something good from my tax dollars for once. A national healthcare plan, at LEAST for the uninsured children of this country, should be a damn priority and would be a good start. You make those parasites in Congress live under the average person's, or better yet, the UNINSURED person's health care options and you're gonna see immediate change. They are out of touch.

No Dickhead we are laughing at you I guarantee that trucker knew exactly where he was when he was keying up. If he didn't buy an illegal import radio now we wouldn't be having this discussion. You don't use your head either, I hear it is pretty quiet just above the 2 meter band does that mean we can key up on the cop freqs? Don't bother answering it is a rhetorical question, and your still a troll

Consider that it means cell phones and just your plain old
telephone in the kitchen too.

I know of one instance where a fellow admitted to having
committed a murder while talking on a cell phone. The local
newspaper had a scanner tuned to it, with a tape recorder
running. It did in fact get printed on the front page, in a
word for word transcript, and he is now in jail.

Gun, handgun, what's the difference? You can have either or both - they're all legal. What's your fucking problem, anyway? As if a measure of personal freedoms in a country is measured by the amount of thermonuclear weaponry a person can legally own.

What about drugs in the US? Can you legally own ten ounces of Marijuana? No? What about heroin? No? LSD? No? Of course, these are all "bad" and "evil" just like alcohol was in the Al Capone days. Or so your politicians want you to believe. Well, guess what... if you're not free to inject a substance of your own choosing into your own goddamn vein, you don't have much of a freedom, do you? Forfuckssake, even a consensual sex between two adult fags was a crime until a few weeks ago. Prostitution is illegal. Patriot Acts I and II are taking away your personal liberties as we speak. And you keep harping on handguns. Ts, ts, ts...

Awww,,,man, you're light years ahead of me. I still listen to
Fillmore audience tapes but on the proper equipment,,,lately Denon and
Akai (I'm not much of a Sony fan)...I guarantee your ear can't tell the
difference....maybe Healy, Raccine or Cummings can, but the average (if
such a thing exists) audiophile from the crowd from which we speak
usually can't. Some friends still use the Sony D3 for recording,,how's
THAT for a dinosaur? Something about crowd comments interspersed with
the muzak the way it was.....raw.....live,....
unedited,,,,unadulterated.
_
>I've got one I've downloaded called Bobby's

Ahhh,, At first I thought you may have stumbled upon some rare
gem.....never heard it called that before until I did some research...I
don't have the MP3 and haven't heard it (the MP3),,but I found it (
tape, of course). It was a benefit for Jerry Brown in Chachauga, Ca in
'82. The infamous KC Moan. Good stuff.

>The sets are longer then an 80 minute CD, so

>I have to listen in MP3.

Where, oh where have my XLIIS 90's gone,,,,oh where oh where can they be? DAT's are still forbidden by some promoters and live bootleg cds? Forget about it!

Is this the setlist?
Bob Weir's Backyard

Date ?

Walkin' Blues

Twilight Time

Blackbird

Take Me To The River

K.C. Moan

When I Paint My Masterpiece

Travels The Fastest->

Easy To Slip

Victim Or The Crime->

Throwing Stones

The Weight//

Searched high and low for information about this show to no avail!

ANYBODY with good info, please get in touch...

encoded by:

stonebear@stonebear.com
*****If this is the right set, email this guy and let him know!*****

source (questionable?):

AUD->DAT->2CAS->WAV [cooledit]->256mp3 [bladencoder]

The 84.4 MB file is 46:07. You'd lose 1:06 on a 45 minute side.
The encoding rate is double the standard MP3 rate, that's why
it's half as long as I thought it was. I have other sets I've
downloaded that are over 80 minutes long.

I have DAT to CD copies of some soundboard shows.
(I'm in the loop). I have one of the signed show
posters from a P+P show at the Warfield.

Most tapers from this crowd today prefer the DAT,,many the micro-mini versions. I lack no source for them,,,I just never made the switch..it appears to be such a monumental task....redoing thousands and thousands and more thousands of hours,,,,I look at the walls of tape spanning almost 45 years and wonder if I will ever get to it...my PRINTED trade list was 17 pages (double-spaced) and that's just from the family tapes,,,I didn't bother to list other relations, even though I have probably another thousand or so of those.....yea yea,,I know,,everyone went through it,,,,,,I'm just taking my time...content with my 1st gen audiences, many soundboards, a few Betty Boards, and a few select masters. Even before DAT, I didn't like anything below a 1st generation tape. Things look pretty good for a fall trip.

2188. above channel 30 ssb only..?

I'd be curious to know the implied band plan for CB in your area. Here's how it stacks up on the West Coast.

Channel(s) Mode Notes
1-5 AM Conventional CB operation
6 AM (almost useless) "The Bowl" *
7-8 AM conventional AM operation
9 AM Nation wide emergency channel **
10-14 AM conventional AM operation
15-16 SSB Used for SSB in 23 channel days ***
17 AM West Coast Truckers Channel ****
18 AM conventional AM operation
19 AM Implied nationwide Truckers Channel
20-30 AM conventional AM operation
31 AM/SSB The AM/SSB mode "property line"
32-40 SSB SSB operation for the most part *****

* Some undefined language is used on "The Bowl"
** Anyone actually listening to channel 9?
*** 16 lsb was a popular "call frequency" in 23 channel days
**** 17 is the most popular truckers channel on the west coast
***** The SSB mode "channel masters" chase AM people off 32-40

cheers

Like I said before ,We need to save the Africans, to the tune of 15 BILLON
to help in their Aids.
To hell with us, the workers, with no health care,]
We work, they receive.
This is Bull Shit, California is going broke from helping the Illegal
immigrants , and it the law to take care of them. They vote to turn it down,
it passed, it was turned over ruled by a court. NOW they pay. 16 Hospitals
are closing from going broke because they cannot collect from the Illegal
immigrants. This is in LA county alone.
NY is next, Texas schools going broke from having to teach them.

2192. Export and Domestic Radio Repair AM/FM/SSB

Newsgroup: rec.radio.cb
Date: 2003-08-08 18:00:46 UTC
From: West Coast Radio <westcoastradio@no-spambudweiser.com>
Message-ID: <3rq5jvon4muqsru8fa67q3o7g0oipk086q@4ax.com>
Source record: 163725

I have been doing CB Radio Repair for over 20 years now for a group of local operators and decided to go bigger than the group. So here I am.

I will repair your Export or Domestic AM/FM, AM/FM/SSB or AM/SSB Base or Mobile for a flat $45 or less + shipping. I also take trade-ins as well. Send me 2 radios like a Galaxy DX-88 and a Cobra 148 GTL and I will fix the Galaxy DX-88 for FREE. 3 Radios gets you free return shipping. Radios must be complete. If you trade in a non complete radio, I will give you a discount of 10% or more depending on the condition and how complete it is.

I will also fix the more popular 40 Channel AM only rigs like Cobra 29LTD, Uniden PC66 etc...

Fore more info or questions E-Mail me at:
westcoastradio@no-spambudweiser.com

Remove the "no-spam" from the e-mail address.

Or Call:

West Coast Radio
P.O. Box 253\111 E. Buell st.
Montague, CA. 96064
(530) 459-3779

TIP #29: Do not waste your time calling about radios you can buy new for 25.99 at WalMart. They are not worth fixing when you can buy a new one for the same price and have an extra mic and bracket from the old one.

It's not the governments job to do a damn thing but serve and protect.
Since they fail miserably at both, I want to see something good from my
tax dollars for once. A national healthcare plan, at LEAST for the
uninsured children of this country, should be a damn priority and would
be a good start. You make those parasites in Congress live under the
average person's, or better yet, the UNINSURED person's health care
options and you're gonna see immediate change. They are out of touch.

_
>Wow! Twistedhed said something that makes

>sense!

Wow! The hammie in Texas City must have stopped binging,, his ability
to comprehend is surprising himself.

Nah, it's not that at all Twist. I've always understood most on here
perfectly. It's just that you take a most unorthodox and eccentric path to
say the simplest things, coupled with the fact that at times your rhetoric
begins to wander widely from the original topic.

I went looking for a rest room and found two doors with pictures of dogs on them. I was completely baffled, so I searched out the manager and admitted that I couldn't tell the difference between the male dog and the female dog.
"That's not the idea," the manager smiled and said. "One dog is a pointer, and the other is a setter."

It's not the governments job to do a damn thing but serve and protect.
Since they fail miserably at both, I want to see something good from my
tax dollars for once. A national healthcare plan, at LEAST for the
uninsured children of this country, should be a damn priority and would
be a good start. You make those parasites in Congress live under the
average person's, or better yet, the UNINSURED person's health care
options and you're gonna see immediate change. They are out of touch.

_
>Wow! Twistedhed said something that makes

>sense!

Wow! The hammie in Texas City must have stopped binging,, his ability
to comprehend is surprising himself.

_
>Nah, it's not that at all Twist.

Ok,,so you haven't stopped binging. (shrug)

>I've always understood most on here perfectly.

Not always,,under this nic,,maybe.

>It's just that you take a most unorthodox and

>eccentric path to say the simplest things,

What did you consider unorthodox or eccentric regarding my bitch about
the guv'mint spending our tax dollars irresponsibly? Mr. Beckwith Camel
made an ostensible remark concerning my beliefs about national
healthcare,,perhaps you have trouble following the relevancy.

>coupled with the fact that at times your

>rhetoric

My WHAT? My "rhetoric"? Rhetoric is an exaggerated display....LOL..sort of like your jumping from nic to nic..

>begins to wander widely from the original

>topic.

You're merely feeling froggy, for reasons compelling only to yourself. Sag on your own shirt.

>oh so now you think the government is failing

>at what it is supposed to do

Nah,,I've ALWAYS felt the government fails at what it's supposed to do: protect and serve.

>and so somehow

>you think they will do better at things they are

>not supposed to do.....

Your words. I didn't say that. How you infer I somehow feel it would be "better", only you may say. I said it would be a start. It cant' be "better" until we have something to gauge it by,,,and children being covered by a national health plan is much more palatable that having my tax dollars squandered in Iraq. So yes,,since you now ask,,I do think that it would be "better" to spend tax dollars on American health plans compared to what they are doing now. Very simple,,this sums it all up,,,,ask any conservative how much government he favors and how he plans to pay for it.

>.hmmmm.....how's

>that wacky tobaccy crop this year twist????

  You would have to ask one who indulges. I long ago arrived at the factual conclusion that the body is a temple and will give back to you what you put in. I'm not 185 pounds of twisted steel and magnificent sex appeal for nothing. I do not desecrate it with foreign poisons, toxins, or hedonistic pleasures such as smoking or drinking to become intoxicated. I take proper care of my self. Although what you offer is natural and can be organic, it's chemistry is morphed into many cancerous causing agents when burned. You would be better off to follow the path of Alice B. Toklas. In parting, I leave you with these words of wisdom....when one can achieve the desired effect and state of mind without substances, then and only then,,,have you arrived. Wharf Rats live longer. Piss me off again and I'll key all weekend long with such huge magnitudes of stray RF that the rainclouds will leave Fl for Texas and remain there for the rest of the year.

Little Johnny was always trying to outdo little Suzie. Little Suzie bought a bicycle, LIttle Johnny bought a bigger one. Little Suzy had her daddy buy her a scooter, little Johnny had his dad buy him a battery powered scooter. Not to be outdone, little Suzie had her daddy buy her a motorized scooter. Little Johnny's dad wasn't about to spend anymore money. "Enough is enough", he told Little Johnny. "Go down there and drop your drawers" the father says, adding " and tell her she'll never be able to grow one of those."
Little Johnny immediately runs back to Little Suzie and shows her his glory, with a huge grin, and says "My dad says you can never grow one of these." Little Suzie flips. She runs home crying and screaming all the way. Her daddy asks her what's the matter. She tells him the whole story. He thinks for a minute, whispers something in his daughter's ear, and her tears dry up immediately. She was beaming ear-to-ear. She skipped merrily back to Little Johnny, whereas Little Johnny sees her arrive empty-handed and says, "I see you got nothing." Little Suzie, without missing a beat, hikes up her skirt and says, "My daddy told me to tell you that with one of these, I can get all of those that I want."

Maybe that was David Beckham's problem.
He went into the Female lavatories where he is at the moment (I think Hong Kong).

With his frocks, hairband, and makeup, they probably wouldn't nave even noticed... if only he wasn't flanked by his bodyguards.

Regards,

Peter.

eBay appreciates the fact that you chose to list your listing:

3040243250 Galaxy Saturn-Turbo Base Station

with us. Unfortunately, your listing was in violation of scanners and electronic equipment policy. Devices that transmit radio signals on the AM or FM
bands are regulated by the Federal Communications Commission, and there are regulations that restrict the range of such devices. On FM frequencies, these low power devices are limited to an effective service range of approximately 35 to 100 feet (11 to 30 meters). On the AM broadcast band, these devices are limited to an effective service range of approximately 200 to 250 feet (61 to 76) meters). Your item exceeded that range limit.
Therefore, we have ended this listing and all fees have been credited to your account.

For a better understanding of our listing
guidelines and how they affect the way you list your items, please visit the following URL:

http://pages.ebay.com/help/policies/listing-ov.html

For information on eBay's policies regarding electronics equipment, please view:

http://pages.ebay.com/help/policies/electronics.html

IMPORTANT NOTICE: Please be aware repeated incidents of this nature can lead to the suspension of your account. We value you as a member of our community and wish to continue this relationship, so we must ask you to refrain from any violations of the Listing Policies or User Agreement in the future.

We thank you in advance for your cooperation.

the children as you say should be taken care of by the parents...the
parents should be taken care of by the kids.....the government
is not a daddy or a parent or a retirement system.....unless we
want it that way.....and if you think we are in bad shape
now.....just wait.....for an example.....look at canada....the
canuuks are all a mess.....and where did we get these
ultruistic welfare and sociolist, ideas he said facetiously????? the
great society is a bust after a few trillion....lbj you dead
sonabitch.....thanks a lot .....

At those frequencies, a linear would be wasted, UHF/VHF are line of sight,
best investment is in good quality low loss coaxial cable, and effective
antennas.

> >
> Hello Lee..?

I'm here, just working a lot of over time the past
week or two and doing some out of town traveling
as well. You would be better off giving me a call
first. Just ask Twisted for my number. He gave it
away to a bunch of people, who called me, in his
E-mail reply's a while back so I know he has it.
>8-() I can't say if I'll be in town or not.
That's the normal speech I give everybody. With
the kind of work I'm currently doing I have no
idea from day to day if I'll be in town or not. I
could easily show up Monday morning for work and
by that afternoon be sitting at Detroit Metro
Airport waiting for my flight to leave. It all
depends on how many calls come in and who is
around to send out.

Since you will be in town for a day or so try
stopping by the National Coney Island on 12 Mile
Road a couple of miles East of Woodward, North

side of the city of Royal Oak on your map. They're open 24 hours and they also serve beer if you want a cold one with your food. it's a popular place with the young crowd particularly in the summer on the week ends. It's a nice place and fits in with the spirit of the dream cruise. The waitresses get dressed up in 50's fashion, at least last year they did. You get to see some really nice chicks there.

If you can show up even sooner, or stay a bit later, I think one night from either Tuesday to Thursday is Bike-Night in downtown Royal Oak. It's been a while since I've been through there so I don't remember the exact night. Anyway when I say "Bikes" I mean Motorcycles, hundreds parked up and down Main street in front of the coffee shops etc. So If you get in to that sort of thing it would be worth your while to check it out. Oh, one more thing, the Royal Oak PD can be some real A..holes if they catch you screwing around even a bit. A word to the wise.

Thats why I post export and amps on Yahoo! Auctions.

Try there...

You could, but it might sit on a shelf for a while until I get tired
of looking at it. They make good frisbee's too.... Oh! And dont forget
4th of July. The owner of the shop I used to work for in Hayward, CA.
used to purposely hook them up backwards until there was no current
draw left. :P

Yea, I behave when I'm driving the Plymouth on the street,
and if I get beer'd up my wife can drive the slapstick
automatic. She doesn't particularly enjoy it though, she
calls it the 'death machine' lol.

I will only be staying a few extra days if my cousin
makes it with his ride. If he doesn't make it, I'll
probably leave Sunday night.

You mean except for in quebec, where they use channel 24 and bleed all over the spectrum. It's interesting to roll down the road, hear massive bleedover, then notice that you're coming up on a Transport Robert or one of the other Quebecois companies, and know that they're up on channel 24... A less polite person would drop a 1500 watt carrier on them and teach 'em a lesson, because lord knows they just won't listen to anyone who speaks English..

Hope you enjoy the cruise Mopar. The weather forecast looks good for the weekend. Hope to see you if I can. If you can give me a shout on 146.52 MHz, that's the 2m call frequency I'll be monitoring that. If not I can monitor all 14 FRS channels too so if you have one you can let me know when you're in the area. Otherwise if it's strictly 11m I'll have to switch from my HT to using my FT-817 multiband - multimode back-pack rig to hear you.

> for quality CB handheld.

That is an oxymoron. Keep the Washington or go for FRS radios,
they work better handheld.

Why get me involved in your desperate attempts to keep the FCC authorities from finding out you don't live at the address you provided them? All you had to do was tell Mopar "no".

>He gave it away to a bunch of people, who

>called me, in his E-mail reply's a while back so

>I know he has it.

Interesting choice of word selection, Lelnad...you claim I gave out your number in my "replies." A "reply" is a response to an initiated action. What "replies", would that be, Lelnad? The only possible "replies" you can be referring to are as follows.....LOL.....the "replies", as you astutely noted and correctly identified (even though you didn't intend to), were all in response to the inquiries from internet strangers I received when you were forging me. It's why you lost your Bignet access at the time, slick. I believe in returning things to their rightful owners,,,but of course,,you know that, now..,,,you learned the hard way.,,lost ISP's for violating their TOS and AUPs......getting taped on the freeband trying to jam down by the lake..,,,,,redundantly using the ARRL sig in your lid-posts to harass cbers (which is now peculiarly absently).....yep,,,you sure learn the hard way.....the same manner in which you will learn that it is a crime to intentionally provide the FCC with a false address other than where you reside. Smile,,,you're on cb candid camera.....your good buddy and pal N8WWM was busted for the same things on the air you're probably gonna get popped for.,,breaking laws you feel don't apply to yourself.

2247. Re: above channel 30 ssb only..?

Newsgroup: rec.radio.cb
Date: 2003-08-11 14:50:32 UTC
From: Steve Phillips <stevemp@storm.ca>
Message-ID: <bh8agthbc1@news.storm.ca>
Source record: 163779

I am in Ottawa, Ontario, Canada.

Around here when they went to 40 channels the deal was supposed to be 35-40 SSB only. And I think they still kept 16 for SSB at that time but I never hear anyone on SSB there these days.

Many people do not respect that. Truckers often just show up on AM on those channels and start talking without checking if anyone is there. With their squelched maxed out it is difficult to let hem know there is a QSO going on.

19 is where truckers generally are.

The dump trucks can be on different frequencies depending on the company/project they are working for. They use at least channels 2, 3 and 24. I am not sure what else.

I am pretty well a sideband only guy.

If the sidebanders around here can't find a clear channel in the 35-40 range they go above. Most sidebanders run radios capable of that.

2248. Re: More Bush Lies (OT)

Newsgroup: rec.radio.cb
Date: 2003-08-11 15:04:16 UTC
From: twistedhed@webtv.net
Message-ID: <10343-3F37B070-153@storefull-2317.public.lawson.webtv.net>
Source record: 163782

GW@cometothehoneycombhideout.com wrote with gusto when he related:
>the children as you say should be taken care

>of by the parents..

In a utopian society this would be true,,and I agree with your altruistic view. However, real world scenarios are quite different. So many parents are screw-ups themselves, today. Look how many children are living in fatherless homes. Look how many children are suffering with weekend and summer-only dads. Allow us to take a scenario where the burden is out of the hands of the parents. There are millions of children in nucular,,er,,nuclear family homes that are without health coverage through no fault of their own or their parents. With the regular corporate raiding that goes on and is permitted of company coffers, is it any wonder millions and millions of folks are being laid off? They receive reduced benefits for awhile, but what happens when it runs out, like is taking place all over America? The worker, who gave countless loyal years to the company firm, is now not only without a decent income, but his family is now without health coverage, through NO fault of the parent. Now I ask of you and pose the question...,,HOW does one "take care" of their chilfdren's health, then?

>the parents should be taken care of by the

>kids.....

Yea? Check out my state......the yankees DUMP their parents here daily on a regular basis. We probably have more nursing homes per square mile than any other state and they are loaded with folks whose families don't give a damn, don't visit, call, write..and who live up north. The University of Florida did a blurb on the 2000 election and the Florida chad fiasco and found that up to an incredible whopping 93% of voters that had "chad" issues were transplants from out of state.......in other words,,"yankees, not Floridians, not southerners"....."nuff said.

>..the government is not a daddy or a parent or

>a retirement system.....unless we want it

>that way..

I beg to differ. The government has long been in the business of attempting to legislate morality and protect us from the "evil" we "may" do ourselves,,especially the republicans. If the government is not a "retirement system" then they need to stop telling us what to do with the social security taxes we pay and stop passing legislation to protect us from ourselves and stop providing comfort and aid to foreigners. Bush

giving aid to other countries instead of taking care of those in desperate need at home illustrates he clearly holds his own personal agendas more dear to him than the welfare of his own constituents and citizens.

>.....and if you think we are in bad shape

>now.......just wait....

Yes, I think the economy is a train-wreck where the caboose and cars haven't collided with the wrecked engine car yet. Oh, I know what's coming, pal. I subscribe to the theory that holds that many of these boomers that refinanced during the refi-boom are in over their heads. Instead of downsizing and paying off what they owed, they bought bigger and better homes, received cash back and spent, spent, spent. The predicted insolvency rate on foreclosures in the future by some leading economic speculators claims this can, and probably wil make the S & L debacle look like a walk in the park, and of course, the banks will need subsidized and bailed out and us, our children, and our children's children will be left to foot the bill, exactly what Reagan had done for us. This is what happens when the feds allow the banks to take advantage of unfair lending practices such as marketing large lines of credit to those with high-risk factors such as bankruptcies and low or marginal beacon credit scores.

>...for an example.........look

>at canada....the canuuks are all a

>mess.................and where did we get these

>ultruistic welfare and sociolist, ideas he said

>facetiously????? the great society is a bust

>after a few trillion....lbj you dead

>sonabitch.........thanks a lot ....

Point noted. But,,,you can't mention the word welfare without pointing out the current administration refers to helping our own citizens as a form of "welfare" and are always against such freebies,,,BUT,,this "conservative" Bush regime is now occupying a foreign country and making medical care available to the Iraqi people merely for the asking. You can begin to hear the screams of those deserving and in need,,,,and what makes Bush such a callous corporate slut, is the cries are coming from our own country, yet he pretends not to notice and ignores us,,,just like his daddy did with the economy. His daddy ignored the economy (It's the economy, stupid!) but junior Bush-lite goes one better,,,he actually DENIES a problem!

proficient
> in the mode(s) they are testing on?

At this point, it's not important or needed for morse
testing has LONG AGO deleted the "sending" part
of it and relied ONLY on the applicant decoding
pre-recorded tapes.

> Seems to me that if someone is going to
> qualify as a VE, they should be at an extreme proficiency level......

I've helped correct tests for teachers for subjects I
knew nothing about...nothing extradordinary there with
multiple choice...or checking a submitted set of
decoded morse text.

> If a VE or VE team cannot effectively send a method of communication like
> morse code as a required testing mode, it makes me wonder of the value of
> the mode in the first place. If they are relagated to only using CD's or

> tapes, I guess that would show the "dumbing down" of amateur radio,
bringing
> it "one step further to extinction."

The reliance on tapes and CDs is because it is NOT all that
easy to be right on with sending code at any set speed (5, 13, 20
or whatever) by hand.

It is far easier to "machine generate" code text at specific speeds
and record them for a permanent use in testing.

> Seems to me it should not be a problem for the whole VE groups to have a
set
> "pre-scripted" QSO's. There could be as many as needed, 10, 20, 30 or
more
> pre-made QSO's to send.

Far better to have the 20-30 or 40 prescripted QSOs recorded
and simply play back one. I initially learned morse for the
5 wpm test using 78 rpm record set from (I think) AMECO.

But, for all this speculation, the code test is soon to be just a historic
footnote, so what's all the fuss?

Cheers,
Bill K2UNK

Can you fix the attached radio... and e-mail it back to me?
Thanks.

>TIP #29: Do not waste your time calling about radios you can buy new
>for 25.99 at WalMart. They are not worth fixing when you can buy a new
>one for the same price and have an extra mic and bracket from the old
>one.

I have known people to turn up with equipment for repair and say, "If it
costs more than a fiver, don't bother".
I just tell them to take it back with them, the parts will most likely cost
more than that.
Even with videos, some say things like, "If it costs more than a a tenner,
don't bother... I can get my Uncle John to do it for less". So I tell them
to just take it to their Uncle John... if he can get the service kit (belts,
idler, etc) for that, then he is welcome to the job.

I'll bet that none of them would work for nothing.

Regards,

Peter.

Well, Tox still has "citizensband.com" going unused, it could be a great URL for an international CB site... which is why I put the UK site on "citizensband.co.uk".
I have a site host with unlimited, CGI and PHP enabled space. I have now created my own custom counter, e-mail form and guestbook... so they can be done totally free and without pop-ups or banners.

>WHAT WE WANT FROM YOU is YOUR views and opinions, rig reviews anything you
>think is of interest. Yes a UK site is setting this up but we do want this
>webzine to be a global affair.

Quite right.
It is better to use global CB news and issues, than to mix CB with Amateur, scanning, TV, etc just to get enough content... as happened to the UKs only CB magazine.

>I apologies is any one feels this post is out of place here.

Don't apologise.
CB is certainly the topic of these groups.

Geogre,,,I've seen you offer to make wagers in the past......betcha a
coca cola Lelnad ends up
on the rain report by Christmas.....whattya
say?

_
>Yes, I am a betting man, if it is the result of his
>own doing Ill take the bet,

I must ask,,,how else can end up on the rainreport? From someone elses
actions?

>" he must have an

>on the air violation"

So, you'll only take the bet with certain stipulations that you
employ,,,,LOL,,always looking for that control that eludes you, eh?
Other violations (that render him a criminal, according to you and your
clubb) that are in direct contradiction with FCC law, the ARRL and the
like are not to be counted, according to you? LOL! Nope,,doesn't work
the way you imagine....,,if the fed's consider it a violation, and he
ends up on the rain report,,he's a guilty 'nother sucker.....that you
feel in a self-elevated position that you somehow have the status to
determine which of the violations are
deemed an offense and illegal and undermine those you feel not
pertinent, illustrates your long standing thirst for power and control
that you have never been able to manage..it's part of what ails you and
is partly responsible for your ever-present and misdirected anger.
That you somehow take it upon yourself to decide which rules set forth
by the FCC are to be obeyed and which ones are pertinent to a lawbreaker
appearing on the rainreport, is beside the point. I'm not certain the
criteria for appearing on the rain report, but my hunch is Lelnad will
appear next.

>I don't wanna hear about post office box

>addresses infractions.

LOL.....Don't tell me,,tell Riley you don't wanna hear about these type
violators for reasons known only to yourself (perhaps it's because this
is the violation you share with Lelnad).

>He must screw up on the air to be a legit bet.

Nah,,,,I offered a wager and you either take it or not. You didn't. You have no control over it, no matter how bad you writhe.

>by Christmas, hell make it a case of coke.

Heck,,,,that old boy is gonna be real careful now. Between the good-time gang in Royal Oak, the new pals he made in rec.radio.cb, the folks on the freeband, and a few stragglers, Lelnad is becoming slightly infamous,,,well,,ok,,mostly because of those guys on the freeband....they took him worldwide the last few weekends. Lelnad received more hits in the last few weeks than most folks get in a lifetime.,,check out his "resume" page at qrz. Anyways,,,,,my offer stands,,,,not much of a gamblin' man,,,,single can of coca cola.....and watch his uncontrollable rage,,it's always been responsible for his actions that led to his reputation as an ignorant, troubled hammie that harasses cbers, lies everytime he opens his trench-mouth, makes cowardly threats and wants to be me so bad he takes to forging me and continually sharing his devotion to myself.....LOL. Now, if you'll excuse me, we all will enjoy his, and your, incompetence and devotion to myself until Lelnad C. Scott KC8LDO learns how to regain and demonstrate a tad of self-control..LOL. Chin up, Lelnad :)

Hell, if he'd apologize and ask real nice like, I've got a
Uniden PRO340XL I send him for $10, shipping included! The
radio works, no antenna had or included with radio. Has a
red/black pair wire sticking out for 12 volts DC. Has battery
cover. Just yet another radio sitting in my growing pile of
stuff that I'll never use.

In most cases, these little radios would work for less than a tenner.
The fianl or driver in such case, but the labor is what eats em up.
If your willing to work on stuff for free and spend your money on
others parts, then go for it. I used to fix rigs for free except for
parts, but it got to hectic with all them running in. But when you say
$25.00 to add channels and Peak, they run the other way. I guess they
could do without or pay another shop $45 or more for a sloppier job.
I always found it funny when someone wants a radio fixed so bad that

they say I will pay whatever to repair it (thinking $10) and when they find out that parts alone will cost more than that, then the labor, They just say keep it. Must not have wanted it very much. The next thing to do is put it up on eBay and sell it to the same person for more than what it would have cost to fix. Hehee! Some people.

I've got a 25GTL here for that reason. I don't use it.
I'm also thinking about parting out these 3 Panasonic 4420's.

> Free Handout Ham Licenses?
>

There has been a free ham license ever since the codeless tech was introduced a few years back. The 5 wpm code requirement has further moved things in that direction. Idiots on the ham bands.

11 meters has come to the ham bands. I listen to the bands and it's certainly not the way things were in the 1980's when I got licenced. I might as well just listen to CB channel 19, it all sounds the same now.

ARRL plan back fired on them. They worked to dumb things done in order to produce more licensee's who might join the organization and fill the corporate bank accounts, but instead, they got a bunch of idiots who don't care bacause getting a license is easy now and when you don't have to work to get the benefits, the benefits you get don't mean a whole lot.

All real hams out there who remember how the bands used to be, send the ARRL a nasty-gram and cancel your League memberships. They screwed us over big time by not protecting the integrity of the Amateur radio Service.

No Code.... No Ham!

Sounds like you old pro-coders are getting upset! I worked and had to pay to get my no-code ticket. Now that Im a coded tech, I still say, rid the code test. You may say it dumbs it down, to me it makes for more conversation and more to converse with. Who wants to talk on a piece of equipment that cost $1000 + but no-one to hear you? Why not let these CB'rs get there license so they can learn the principals of ham radio instead of bootlegging. I realise that you guys are all stuck in 1950, but WAKE UP!!!!!! This is 2003!!!!! This reminds me, Wasnt it quite a few years ago that a bunch of HAMS like yourselves were complaining about solid-state over tube? Oh my god! There dumbing down radio with RF transistors!!!! What is next!!!!! Quit whining and get involved in making the radio better for all. All you pro-coders are just wasting your breath. They still make tubes, but you have a choice if you want to use tube or transistor equipment. Isnt that nice, To have a choice? I chose to advance in my hobby by going to Extra soon, and I dont need a code holding me back. Do you actually think that the bad CB'rs are going to go get a license so they can JAM and CUSS at you? NO!!! The good ones will! So where is the FREE at?

Cya, wouldnt want to be ya.

Hello. I have two Johnson 223 tube type CBs, and they both have the same problem. They'll run fine for a while, then the radio pops and the receive drops out. It may be out for minutes, hours or days, and then pop, it comes back in. It is the same on all channels. I have been frustrated trying to figure this one out for several years now. BTW; it is not an audio problem and transmit is unaffected. I have swapped out all the tubes to no avail.

Does anyone have a clue as to what is going on with these radios?

Thank you.

Russ

What part of "I have swapped out all the tubes to no
avail", did you not understand?

It might be a relay. Sparky is the guy to ask.

No, Mopar, the VEs charge. It used to be free at the FCC, but, for me at least, that meant a 60 mile trip (120 miles round trip) to the FCC in Buffalo, NY, and one minute of perfect copy at 20 words per minute. When I had dropped my tickets and decided to retest in 1993, I believe it was under $6.00 for the session. That was 20 words per minute, but multiple guess. Now it is 5 words per minute, but the testing charge is considerably higher (don't ask me, I don't know. I simply showed up for the tests in '93. You don't have to score 100%). So, while someone may pay for the exam, that 120 mile round trip savings is worth something. Don't worry too much though. I hear the FCC is going to try to package the licenses in boxes of Cracker Jax. :)

73 from Rochester, NY

They don't have me worried yet, Jim. Note to self: buy some
Cracker Jax stock.

Or they will come with the radio, you take the te$t and mail
it back with a check.

Thanks for the heads-up.

The problem could be any one of several different issues. The first thing to check is the mic and/or relay contacts which may just be dirty. But I doubt that's the problem. Another possibility is the audio transformer: like most radios built at that time, the audio transformer doubled as both the speaker output and modulation transformer. But the 223 was unique in that it had seperate windings for each purpose. So the speaker output winding could go out and you still have modulation, or vice-versa. But again, I doubt that's the problem.....

The big issue with the 223 was their frequency synth board. The PC board itself was cheap phenolic crap, the type of early stuff where the traces and pads fall off if you hold down the soldering iron two seconds too long. Johnson probably didn't realize that the heat from the tubes would degrade the boards over time. Anyway, most problems with the 223 are in that board, and I'm betting that's where the problem is with those radios. There are no replacement boards that I know of, and repair is tricky (because they are so sensitive to heat). Even if you can fix it, the chances of it going bad again very soon are very high.

If someone is ambitious, one could strip a good board, scan it, then make and market some new blanks using a good glass/epoxy material.

2304. Re: above channel 30 ssb only..?

Newsgroup: rec.radio.cb
Date: 2003-08-13 05:07:06 UTC
From: r8500@aol.com
Message-ID: <20030813010706.00972.00001318@mb-m22.aol.com>
Source record: 163888

Here's the band plan/usage in my area (Northern Utah):

Channel 1: Flying J Scale Channel
Channel 2: Dumptrucks
Channel 3: Unidentified trucking company
Channel 4: Dick Simon Trucking
Channel 5: Unidentified trucking company
Channel 6: The Bowl (when conditions permit, otherwise not used)
Channel 7: Spanish channel
Channel 8: Unidentified trucking company
Channel 9: Mostly used by idiots for chit chat because they are not aware it's the national emergency channel
Channel 10: Neighborhood Watch Channel
Channel 11: Mini-Bowl
Channel 12: Unidentified trucking company
Channel 13: Used to be the local call channel, now dead except when used by truckers
Channel 14: Unidentified trucking company
Channel 15: Schneider Trucking
Channel 16: Spanish channel
Channels 17-18: Mostly dead due to splatter from 19
Channel 19: Abuse channel
Channel 20: Test channel
Channel 21: ABF Freight
Channel 22: Smith's Food King drivers
Channel 23: R/C channel
Channels 24-35: Mostly dead
Channels 36-40: SSB when the DX is in,
otherwise local truckers are heard on 38 & 39. 40 has mostly fallen to the AM'ers, DX or not.

73,
David

Yes. Hams get 11 meters back. They have been jealous of the band
as well as the CB newsgroup. This has always been evident by their
presence in both areas.

you know this guy talking about little green men, chasing 20 year old
skirt at college........man i don't know........i this guy is
dillusional........but ......he makes a damn good addition to the
hamster ranks.........all because they thought it would be a good idea
to get rid of code...........ain't that a kick in the pants.????

No I didn't Jim, I usually scan right past mtv. What is it a
music video from a band called audioslave?

That is possible; I had a Messenger II (which is very similar to the 223)
that toasted an IF can. I check check the 223's for continuity a few years
ago, but being an intermittent problem, the bad one may have checked out OK.
It's not the relay. The audio output trans is good because the light hum
does not diminish when the receive pops out.

Frank mentioned the solid state synth board which I have suspected since it
is definitely out of place in that hot tube environment. It may well br
the culprit.
Thanks for the comeback.

Could you tell me which channel is used for callings between truckers on road (in europe)?

We are planing to organize CB radio help (with emmiting information in case of closed road and acidents) for truckers and campers in region of Sibenik in Croatia.

Thanx and sorry for my bad english

73 de 328SU035

Krizna radio mreza grada Sibenika

Yeah, right. If "freebanders" had any respect for the spectrum they would follow
the same rules that everyone else follows. They don't. If they did, they
wouldn't be "freebanders"; i.e, illegal.

Pendulum swings both way, you hypocrite. Since you hold no respect or
tolerance for usenet posters who correct you in your many errors along
the sad path in life in which you slither and those who voice an opinion
that differs from yours, following your logic, one could correctly
surmise that since you have no respect for usenet or it's posters, you
more than likely act the same way on the air as you do in here.

Grouper, grouper, and more grouper,,but for some reason this years seem
a tad smaller than last....but still, a wonderful time of the year.
Jacks are wild (sporadic) but are also hitting close to shore. Reds are
coming out of the canals and heading for deeper water but the snook seem
to be hanging around the bridges, piers, wrecks, and reefs. Barracuda
are also being caught in deeper water. Silver Kings are being caught
with the Tarpon, but you better be quick,,,,plenty being lost to sharks
before they can be reeled in. Live shrimp population in Tampa Bay is
better than I have seen in years.

Definition of the SuperBowl
If 10,000 CB'er's are on the SuperBowl
then only 1000 can be heard some of the times
& only 100 can be heard most of the times
& only 10 can be heard all the time
This is a great example why the bowl is not for the weak!

Definition of the SuperBowl
If 10,000 CB'er's are on the SuperBowl
then only 1000 can be heard some of the times
& only 100 can be heard most of the times
& only 10 can be heard all the time
This is a great example why the bowl is not for the weak!

Twist,

I wish you could have seen my face when I discovered the problem. My power didn't go out, but when I changed from the satellite to local tv for the news, everything was dead. I thought the dogs had pressed some buttons. Pulled the entertainment center out and was checking all kinds of cable - then I checked two other televisions hooked into the system. All seemed dead on local stations. When I suddenly discovered a weak UHF station, I grew suspicious. I called a friend and his cable was on, but no television. I found out what was going on with the HT. Meanwhile, back at the ranch, I had a few dozen jumper coax cables lying around .... BWaaaaaaaa!

You take too much credit however. The latest theory is that it was our friend N8*** hooking up a doorbell :)

Twist,

You'd better watch out. I'm not worried about that little 2 watt radio you've got; I have it on record that your fishing line is reflecting sunlight and causing solar flares. I've got to find the link to the John Birch Society as well - you are so dangerous :)

BTW, you should borrow that battery pack on the rig I've been using the past few weeks. That Hyster model has a 40 volt DC pack rated at 1,200 AMP hours! Initial charge from a half-discharged pack runs around 180 amps!

Twist,

Just a quick question - do you remember J. Burns Pizza and Pipes? I visited that place. Almost had a chance to sit down at the instrument. That would have been ... uh .. interesting. Interesting in the same way it would be if I could meet some of the "gotta have Morse Code or you're no good" guys on the air. Very interesting indeed. Want Jesse Crawford? Open harmony? Counter harmony? Sigh. Of course, no one on this newsgroup knows what they're talking about anyways. LOL. I remember Hector Olivera coming to Rochester. He was clowning around on the keyboard of a 4-22 Wurlitzer pipe organ. One woman in front of me stated "he can't even play 'popeye the sailor man'. Good grief. Let me tell you, before the end of the evening, that kid (well, he was young back in the 70s) tore the heck out of 'flight of the bumblebee'. He coupled the piano down to the pedals and was playing the dang thing (in ballet slippers) with his *feet*. Every bit as well (or better) than the Eastman grads could do with their hands. The guy was playing *chords* with only two feet by bridging his heels and toes over notes on the pedal board. I just love the 'information' some folks feed us. Heck, maybe you could give lessons in communications to some of the folks that love to flame around here. :)

73 from Rochester, NY
Jim AA2QA
ps - I *will* give you a holler when I get down there next time. When I'm ready, I'll e-mail my phone number and gimme a call collect and we'll set something up. I should bring that Hyster battery pack - 40 volts at 1,200 AMP hours. Problem is, it weighs nearly two tons.

From: aa2qa@frontiernet.net (Jim Hampton)
Twist,
Just a quick question - do you remember J. Burns Pizza and Pipes? I visited that place. Almost had a chance to sit down at the instrument. That would have been ... uh .. interesting.

>That old place burned down a few years ago.

>They were already OOB by then.

Interesting in the same way it would be if I could meet some of the "gotta have Morse Code or you're no good" guys on the air.

>Well, nocodes that feel they reside in some

>type "hiearchy" compared to cbers, and who

>bash cbers for no

>reason except that they ARE cbers,

>sometimes need gentle reminders that they

> are nothing on the hiearchy scale IF such a

>scale were to exist. Those cbers they are

>bashing may be hammies,,,,and not nocodes.

Very interesting indeed. Want Jesse Crawford? Open harmony? Counter harmony? Sigh. Of course, no one on this newsgroup knows what they're talking about anyways. LOL. I remember Hector Olivera coming to Rochester. He was clowning around on the keyboard of a 4-22 Wurlitzer pipe organ. One woman in front of me stated "he can't even play 'popeye the sailor man'. Good grief.

>I can relate big time. I remember a Dylan

>show back in the eighties. When he played

>"Knockin' on Heaven's Door", some young

>girl in front of us said "I can't believe he's

>playing a Guns and Roses tune.

Let me tell you, before the end of the evening, that kid (well, he was young back in the 70s) tore the heck out of 'flight of the bumblebee'.

>Ain't nothing like the real thing now, is there?

He coupled the piano down to the pedals and was playing the dang thing (in ballet slippers) with his *feet*. Every bit as well (or better) than the Eastman grads could do with their hands. The guy was playing *chords* with only two feet by bridging his heels and toes over notes on the pedal board. I just love the 'information' some folks feed us.

>I like it all (almost),..as long as it's live.

Heck, maybe you could give lessons in

communications to some of the folks that love

to flame around here. :)

–

>Oh, you gonna be marked now!!

>Heck, Jim, I'm a simple kind of man, I like

>fishing, I like the swamps, and I like playing

>radio, and I like LP DX. Nothing sinister about
>that, but for some reason,

>some insane folks think I'm the anti-christ

>incarnate for talking skip. At least I know

>they hear me.......hell, Geogre has a "plan"

>'cause me talking barefoot skip restricts his

>ability to

>talk and affects his cognitive

>functions.

73 from Rochester, NY
Jim AA2QA
ps - I *will* give you a holler when I get down there next time. When I'm ready, I'll e-mail my phone number and gimme a call collect and we'll set something up. I should bring that Hyster battery pack - 40 volts at 1,200 AMP hours. Problem is, it weighs nearly two tons.

>Ouch! When the weather cools (like in 4 to 5

>months) I'll pitch a tent

>on a spoil island and monkey around a bit.

>Gonna see if I can't find a light-weight 30 foot

>telescoping mast somewhere.

Twist,
You'd better watch out. I'm not worried about that little 2 watt radio you've got; I have it on record that your fishing line is reflecting sunlight and causing solar flares. I've got to find the link to the John Birch Society as well - you are so dangerous :)
BTW, you should borrow that battery pack on the rig I've been using the past few weeks. That Hyster model has a 40 volt DC pack rated at 1,200 AMP hours! Initial charge from a half-discharged pack runs around 180 amps!
73 from Rochester, NY
Jim

_
I have it on record that a certain fish is beside himself over being taped on a frequency where he shouldn't have been.
As far as the line, I'm messing around with a new type of fire line.
Now if only that pack could be waterproofed...

hmmmm.....

Northern N.Y. ham cited...the conclusion
Published on 08/15/03 at 16:51:57 EST by KC2FTN

By now, I'm sure that many of you are familiar with the case from other ham sites about the Northern NY man who was ticketed by the police for having a 'radio that is capable of receiving police frequencies.' Well, after TWO months of legal wranglings and representation via the ARRL, Mr.Rick Lalone KC5GAX had all of the charges against him dropped. Apparently, Rick was initially stopped by police for 'erratic driving', and upon inspection of his vehicle the police cited him for having a radio (Icom IC-706MKIIG) that was capable of RECEIVING police frequencies. Don't all radios pretty much do that? Rick's case caught the attention of the ARRL who helped him locate an attorney in Alabama, Susan A. Terry, who represented him for free. Ms.Terry practiced law in New York for 15 years before moving to Alabama. Citing case law, LeRay Town Justice John W. Hallett said the law is meant to prevent criminals from listening to public broadcasts in their cars either before or after the commission of a crime and to prevent the jamming of airwaves during police broadcasts. Judge Hallet also cited the EXEMPTION for licensed amateur radio operators in his decision. At the same time, he called the law "...probably the most poorly drafted section of the vehicle and traffic law." Additionally, Jefferson (NY) County Assistant District Attorney Dylan T. Tester suggested that licensed operators seek the state Legislature for a rewrite of the law. In part the law prohibits vehicle radios that can tune in to police frequencies without a permit. It generally EXEMPTS "any person who holds a valid amateur radio operator's license issued by the FCC" as long as they operate on frequencies exclusively assigned to radio amateurs. Mr. Lalone holds such a license. Anyway, I for one APPLAUD Rick for not just 'laying down' and paying the fine. He stood up for the MANY amateur operators of New York state, and he just may be the catalyst into getting this 'vague' law re- defined. My hat's off to you Rick, and I'm SURE that MANY of us New Yorkers consider you a pioneer. GREAT job neighbor!

2404. Complete set of Sams Photo Fact CB Radio Series for sale!

Newsgroup: rec.radio.cb
Date: 2003-08-16 21:23:31 UTC
From: Nighthawk <miner1@flash.net>
Message-ID: <nhx%a.2402$9k7.101@newssvr16.news.prodigy.com>
Source record: 163938

Complete set of Sams Photo Fact CB Radio Series, yes that is right volume 1 to 293. After a lot of self argument I have decided to sell my complete set. If you have a CB radio/radios, and ever wanted to work on them, these are a must. I will post the set here for a few weeks, then break it up and sell them on e-bay. I will make more money selling them split up in small groups on e-bay. I would rather see them go as a set.

The complete price, with you coming to Moore, Oklahoma, and picking them up is $1500. I know this sounds like a lot of money for many of you, but if you try to make a set by buying them each from e-bay and other sources it adds up to a lot more. It cost me much more to build this set. If I have to pack them up and ship them it will be more.

If interested e-mail me at nighthawk111@juno.com

It's funny when people blame others for a problem that lies within.
It is the United States Fault for this. Should have been prepared like
California should have been. Oh, Who is laughing now East Coast? :P

Anyways, All the money the government has and they cant even take care
of there own country. It all has to go to other countries that wont
learn to survive or dont want to learn and mooch off others.

Canada needs to supply there own like US should do. Borrowing will
only get you in trouble when it is payback time.

You can blame it on bush if you like. He seems to be a good target on
this debate as well as several others. Where are those WMD's that our
soldiers are getting killed over? Do I hear "Impeach Bush"?

Clinton may have been getting his cock sucked under the desk,
But at least I wasnt paying outrageous prices, My power was on, I was
working for a great company that paid me great for my work until Bush
took them out of business. I will be glad when the drug and alcohol
swilling president Bush is history. See you republicans on the other
side...

It just goes to show, that if the US falls, which it won't in my lifetime, that everyone else will fall, but who would really want Canada?

The 'great lakes loop'.. I didn't go to Detroit for the car show
because of it. I didn't want to get stuck in a traffic jam, while
trailering the Plymouth. So we went to Wooster instead.

Not as much fun as Woodward.

I did that on 11 meters, sort of. I was running my eagle on am,(it's best
place). I dial past channel 9 and I hear distant traffic, it was after
sunset and the band was quiet. Here it's these jackass's out on lake erie,
and they're out of gas.

It was really calm so they were in no danger, but they only had a cb
on-board and when I heard them, they couldn't hear me until I turned
the beam north. Then I called the marine towing service for them on
the land-line, advised them about the cb only situation. Then I listened
to both of those assholes trying to call each other back and forth
on ch 9.

I finally keyed the eagle 515 amp and they both thought i was the boat
they were looking for. They finally hooked up, but that dude was lucky
I stumbled by that channel.

It was my good amp deed, indeed.

To catch Twistedhed on the freeband and get him "FCC busted", we will need
to have solid evidence. One way is to photograph him on his boat with a telephoto
lens. At the same time a recording must be made of him illegally transmitting.
It may be difficult but it CAN be done.

If you have a boat and are in the Tampa Bay area, we need your help.

To Direction Find (DF) Twistedhed's illegal CB transmissions,
set your receiver for 27.555 and your GPS for these coordinates around Tampa Bay:

The Ice Box is a large area that starts about 8 Nautical miles west of Casey Key
and 10.11 miles at a 209ï¿½ mc from New Pass. He is sometimes in this location.

Cuda Hole GPS: 2714.398 - 8245.326:
This ledge is called Table Rock and is one of many in the Cuda Hole area that he goes to
often.

Gully Loran C: 2715.002 - 8246.890:
Another large area with ledges he fishes at. A 259ï¿½ mc for 10.29 miles out of New
Pass will put you in the area that Twistedhed frequents.

Swiss Cheese Loran C: 2712.031 - 8254.902:
This is a hard bottom area.
A 250ï¿½ mc for 18 miles out of New Pass will get you started on locating him.

Old Barge GPS 2709.694 - 8253.053:
The Old barge is very old and in 80' feet of water. A 249.6ï¿½ mc for 17.69 miles
from the New Pass sea marker is the Rang & Bearing. This is a Twistedhed favorite.

Point of Rocks GPS 2714.224 - 8231.829:
Warning, this place has large rock just under the waters surface for some ways out
from the beach. Be careful, Twisty may try and run you aground if you get too close.

Notice the title of the Auction? Free shipping then in small print $10 shipping. How 'bout trouble with loading pictures in eBay. His next auction has pictures though. Just thought any bidders might want to look at the 'hole thing before bidding. The '43 may be unworthy of pictures...heh!

You don't hav to put my auction down.,"THE GOLDEN RULE IS" If you don't have nothing nice to said "Don't Say Nothing."The shipping is free,I was using a friend camera at the time.So Instead of changing anything I left it the same.Thank you, for
noticing it.But if you have a problem with it ,you should have email me one on one
Instead of posting your comment on a Web site that everybody see.I could have fix
the problem, you are trying to make it "WORST" with your Negative comment.

Johnny.
By the way,the bird meter is in good condition "AS I STATED!

That's your golden rule.........
The most effective is HE WHO HAS THE GOLD.............

I'm glad I noticed it. I'm glad I made others aware of a potentially
bad deal. I could use another Bird and started to bid on that one 'til I
"seen"
the red flags. Contradictary terms are RED flags. No picture is a RED flag.
Check out the forums on eBay. See how simple deals turn into big surprises.
I think the '43 is a mess and I'll not be the one to receive the delivery
SURPRISE!

Site?
Isn't that a Yahoo group?
You simply sign up, receive the messages in your e-mail and reply if and
when you wish.
You don't need to be at a certain "site".

Own up, you only have two "personnel"... you and your sock puppet.

Hello Carl:

Good call there.

I bought a Turner +3 Mic a few years ago, with no picture, never again.

It smelled like cigarettes and melted down tires. The Mic head was loose
and the Batter retaining clip was missing. The PTT switch had to be
re-bent and adjusted, and a mic connector added. So after a several
hours of cleaning and fixin it up, its now working just fine.

Jay in the Great Mojave Desert, ... just down the road ah ways from the
fillin station.

you know i have a great idea.....why don't some of you akc pinheads
get in your john boat along with a couple of fcc twits from the tampa
enforcement office and you asswhipes paddle out there and catch ole

twistie bumpin his gums on the freeband.....good
buddy.....either put up or shut up.....

news:<1a4c42d1.0308171135.4d8cc2af@posting.google.com>...
> See GPS coordinates and instructions in FILES menu at:
>
> http://groups.yahoo.com/group/Twistymustleave/

If you have a boat and are in the Tampa Bay area, we need your help.

To catch Twistedhed on the freeband and get him "FCC busted",
we will need to have solid evidence. One way is to photograph
him on his boat with a telephoto lens. Get the boat's name and
reg. number also in the photo. At the same time a recording
must be made of the operator illegally transmitting. It may be
difficult but it CAN be done. This method has been proven
successful by hams in North Carolina for catching illegal
truckers on 10 meters.

Be advised this is NOT stalking or harassment, simply a legal
effort to gain evidence and merely OBSERVE a crime being
committed. These are PUBLIC waterways and ALL boaters are
permitted to be there. We urge you NOT to confront Twistedhed.
Leave that to the FCC and the courts. You are just there to gather
evidence.

To attempt to Direction Find (DF) Twistedhed's illegal CB
transmissions, set your receiver for 27.555 and your GPS
for these coordinates around Tampa Bay:

The Ice Box is a large area that starts about 8 Nautical miles west
of Casey Key and 10.11 miles at a 209? mc from New Pass.
He is sometimes in this location.

Cuda Hole GPS: 2714.398 - 8245.326:
This ledge is called Table Rock and is one of many in the Cuda
Hole area that he goes to often.

Gully Loran C: 2715.002 - 8246.890:
Another large area with ledges he fishes at. A 259? mc for
10.29 miles out of New Pass will put you in the area that Twistedhed frequents.

Swiss Cheese Loran C: 2712.031 - 8254.902:
This is a hard bottom area. A 250? mc for 18 miles out of
New Pass will get you started on locating him.

Old Barge GPS 2709.694 - 8253.053:
The Old barge is very old and in 80' feet of water. A 249.6? mc

for 17.69 miles from the New Pass sea marker is the Range
& Bearing. This is a Twistedhed favorite.

Point of Rocks GPS 2714.224 - 8231.829:
Warning, this place has large rock just under the waters surface
for some ways out from the beach. Please be careful. We make
fun of Twisty but the truth is that he IS a pirate operator, which
means he does not recognize the laws of the USA, so he may
try and run you aground if you get too close and he sees that you
are attempting to surveil him in the act of freebanding. Please
use CAUTION at all times.

2461. SGC ADSP2 Board w/Uniden Grant XL

Newsgroup: rec.radio.cb
Date: 2003-08-18 17:59:04 UTC
From: Bert Craig <wa2si@arrl.netNOSPAM>
Message-ID: <lt80b.114534$_R5.41380001@news4.srv.hcvlny.cv.net>
Source record: 163993

Hi everyone,

I hope you are all well. A while back, I'd mentioned that I'd QSO'd with a gent who was using a DSP board. Well, I had to try it out for myself and had SGC install their ADSP2 board into my Uniden Grant XL.

Some may say that it's like installing dual Weber side-draft 2 bbl. carbs on a Ford Pinto 4 cyl. engine. (Actually that's been done.) Why do it? Because I can, that's why. ;-)

Actually, the base receiver of the Grant XL is a very good platform to begin with. It's the same chassis/board as the venerable Cobra 2000 GTL with the same great receiver. I'd already added CBCI's Channel Guard IF filter with good results, increased ACR. (Adjacent Channel Rejection) The ADSP2 installs further down in the receiver chain so one doesn't interfere with the other. (No pun intended) :-)

Well, upon powering up the radio and cycling the two microswitchs through their positions, one thing became immediately clear...I was going to be one VERY happy camper. There are three filter settings; voice, CW1, and CW2 as well as two levels of DSP, hence the two microswitches. Of course, each can be turned off completely. I find that the first DSP level is quite sufficient and the voice filter is rarely even needed. However, when the signal-to-noise ratio becomes unbearable, (As it has recently in this locale on both 10m and 11m.) it's nice to be able to "kick" the filtering level up a notch (Again, no pun intended.) or two.

Is it kinda pricey? Yeah, but it's no more than what many seem willing to shell out for an amplifier and its 100% legal. Here's the website. Hope this heps some of you, take care. :-)

Please tell us Bert that you are gonna put the thing in a better radio?

$180 invested into a Grant CB. Seems way overkill. The radio is worth about $80 mint. Whatever its yo' money.

Hey did you notice the ADSP unit is $180? The speaker is only $130. Ohhh I see now. The speaker is called a ADSP speaker but doesn't have ADSP in it. That can't be right..... Tell me there IS a ADSP unit in the speaker for $130. That is $50 cheaper.

The2x4

No need, it's desktop companions are a Yaesu FT-840 through a Timewave DSP-599zx and an Elecraft K2. (Top dog receiver.) I'm kinda considering a Ten-Tec Orion if the tax man is particularly good to me next year. :-) There's just no emoticon for a $hit-eatin' grin.

> $180 invested into a Grant CB. Seems way overkill. The radio is worth about
> $80 mint.

I bought the rig brand spankin' new for $124.95 on a close-out special. (Not eBay!)

> Whatever its yo' money.

Yup, some things you just can't put a price on.

> Hey did you notice the ADSP unit is $180? The speaker is only $130. Ohhh
> I see now. The speaker is called a ADSP speaker but doesn't have ADSP in it.
> That can't be right..... Tell me there IS a ADSP unit in the speaker for
> $130. That is $50 cheaper.

Not really sure, however, I wanted the board installed directly in the receiver chain...not after. I've also used the ClearSpeech DSP external speaker. The ADSP2 installation sounds much better and is more versatile wrt the various levels of filtering.

Chuck,
Hey bud, these impotent twists can do nothing but what you see,,,,,the extent of their incompetence begins and ends here,,,well, except for WA3MOJ,,,,as Dick said,,Geogre is simply insane and is tolerated as the small joke he is. KC8LDO, N3CVJ, and N8WWM have been shown their true colors more than I ever could point out. I've been here for how many years and you know what these guys have accomplished? I'll tell ya'' what,,,,,ring KC8LDO, WA3MOJ, or N3CVJ through google.....LOL.....their legacy and accomplishments for all the world to see,,,,LOL! God, I just LOVE usenet,,,these yellow cowardly lids' actions and detriments to hammie radio are there for the to see and for my personal entertainment at my slightenst whim,,,,,like me, love me, loathe me,or hate me, there is no doubt the power these children have given me,,,rock on, Chuck!

>buddy.....either put up or shut up.....

_
  It IS rather bizarre that one can become a frenzied wreck over little old me talking skip. What you are asking, my good brethren, is for the yellow stripers to become "Proactive" insteqad of "reactive". Think about what you ask,,,,you have a better chance of teaching Lelnad how to spell and obey rules, Geogre how to communicate and obey rules, Hall how to not be a hypocritical lying lid and obey rules, and N8, well,,,forget N8,,,can't teach rabid dogs.
Think about the life and state of mind one need lack, to do nothing all weekend, but to sit here and make a plethora of posts about me,,(chuckle),,imagine,,,sitting all weekend in front of your pc, doing nothing but thinking of someone else, (MEMEMEMEMEMEME) a complete stranger,.. a worldwide phenom YOU created, nevertheless, but a complete stranger. Imagine doing nothing but longing for the object of your mania and infatuation to return, daydreaming and ruminating over such a mild-mannered internet persona until it eats at you like a cancer causing you to react with behavior all-consuming, pathological, and obsessive.
Imagine Geogre and how poorly his mental health is,,,all weekend,,,night, day, evening, afternoon,,,,think about how destroyed his ego and self-esteem is, and think about how utterly low he feels. Think about making URLS and groups about someone you don't know but love,, ALL weekend, all day, evening, and night, imagine that is your goal, your reason for drawing breath, your reason for getting out of bed in the morning and not gooing to bed until you are certain your object of affection is not going to respons for days,,no matter what you say or how bad you need it,,,LOL.....,,imagine the compulsion suffered,, the persuasion that my very enunciation holds over such an artiste', hanging on my every word,.....imagine the severe trauma his fractured ego has already endured from so much rejection all his life from everyone he has ever come into contact with.. Imagine the anguish and failure one must feel when , after being rejected all your life, you are now rejected in the one place where most everyone is welcome,,,the internet..,,as all

are aware one must be one serious F***-up to be viewed as a canker sore by ALL the folks on the internet, as Geogre and Lelnad and company have managed.
Imagine your only attempt at redemption is absorbing my presence vicariously. Why, I do believe I just illustrated a school yard crush to the "T".....like the one on his forehead..LOL!

LOL...Right. Can't have one disagreeing with your views,,,LOL,,,THAT would undermine the purpose of your failed attempts at fascism in rec.rado.cb., which, judging by your consistent howling, has you bleeding profusely from all orifices in your body. If you were permitted to perpetuate such fascism here in rec.radio.cb, you wouldn't feel like you were run off and have to form your own group (HAHAHAHHAHAHAHAHHA....what a familiar theme). Your lack of intellect and defici in communication already has you referring to a yahoo group as your website,,,LOL. I can't purchase this type caliber entertainment. Can I rent you? LOL,,,hey,,but seriously,,CAN I RENT YOU? LMAO That growing deficit in communications and mild retardation you demonstrate with no modesty is certainly,,uh,,,,amusing..... LOL.

2474. best emergency handheld CB

Newsgroup: rec.radio.cb

Hi,

I am looking to be a handheld CB radio for use in emergency situations in the United States (such as hurricane evacuations). I would need something rugged, rain-proof (or better, really water-resistant or water-proof), with the main set of channels (including the channels monitored by the police). While I absolutely need a handheld battery operated model, it would be best if I could also plug it in my car lighter and snap an antenna on the roof if I am in a car.

Since I have a separate weather-radio I do not need the CB to include this option.

Can you point me to a good model?

Thanks!

Andrei

LOL>>>>>>I'm back for ten minutes and you;re laying in wait to sag on my shirt....nah,,,,you;re guilty, and everyone knows it. Calling someone a troll and cursing in all your posts illustrates yo're a lid, Geogre-boy. Deal with it, get the hell over yourself an move on. Thing is, you can't accept yourself as you are, and neither can Lelnad or N8,,,see,,,,you hate yourself,,it's the main reason you are always angry and miserable and full of hostilty,,,,which is stemmed from your low self-esteem which, of course goes hand in hand with your destroyed ego, which, I acknowledge some responsibility for,,,,but I won't apologize,,,when I see lids like yourself and KC8LDO doing things, saying things on a regular basis that screw up everything hammie radio operators have worked so hard for,,,,well, I'm gonna pull your card each and everytime, and all you and Lelnad's games in the world isn't going to change that,LOL..you're impotent.,,both of you. There is nothing you can do. You will continue to blacken the eye of amateur radio operators and I will continue to iliustrate it. You can make every single post in this group about me from here until next Easter for your annual bathing, it won;t change a thing. There-is-nothing-you-can-do. You're a loser (you know this, hence your anger) and so is Lelnad. I suggest finding another medium in which to advocate your censorship and doing away with all you don't like, since you meet with nothing but repeated failure upon failure in this medium, thus adding to your already battered and whupped ego...you're caught in a vicious downward spiral , only I won't allow you to go down the drain,,,like a bug in a toilet,,,,it's so much more satisfying watching a parasite drown himself..like N8 did by getting popped by the FCC and like Lelnad is going to find out..

It IS rather bizarre that one can become a frenzied wreck over
little old me talking skip. What you are asking, my good brethren, is
for the yellow stripers to become "Proactive" insteqad of "reactive".
Think about what you ask,,,,you have a better chance of teaching Lelnad
how to spell and obey rules, Geogre how to communicate and obey rules,
Hall how to not be a hypocritical lying lid and obey rules, and N8,
well,,,forget N8,,,can't teach rabid dogs.
Think about the life and state of mind one need lack, to do nothing all
weekend, but to sit here and make a plethora of posts about
me,,(chuckle),,imagine,,,sitting all weekend in front of your pc, doing
nothing but thinking of someone else, (MEMEMEMEMEMEME) a complete
stranger,.. a worldwide phenom YOU created, nevertheless, but a complete
stranger. Imagine doing nothing but longing for the object of your mania
and infatuation to return, daydreaming and ruminating over such a
mild-mannered internet persona until it eats at you like a cancer
causing you to react with behavior all-consuming, pathological, and
obsessive.
Imagine Geogre and how poorly his mental health is,,,all
weekend,,,night, day, evening, afternoon,,,,think about how destroyed
his ego and self-esteem is, and think about how utterly low he feels.
Think about making URLS and groups about someone you don't know but
love,, ALL weekend, all day, evening, and night, imagine that is your
goal, your reason for drawing breath, your reason for getting out of bed
in the morning and not gooing to bed until you are certain your object

of affection is not going to respons for days,,no matter what you say or how bad you need it,,,LOL.....,,imagine the compulsion suffered,, the persuasion that my very enunciation holds over such an artiste', hanging on my every word,.....imagine the severe trauma his fractured ego has already endured from so much rejection all his life from everyone he has ever come into contact with.. Imagine the anguish and failure one must feel when , after being rejected all your life, you are now rejected in the one place where most everyone is welcome,,,the internet..,,as all are aware one must be one serious F***-up to be viewed as a canker sore by ALL the folks on the internet, as Geogre and Lelnad and company have managed.
Imagine your only attempt at redemption is absorbing my presence vicariously. Why, I do believe I just illustrated a school yard crush to the "T".....like the one on his forehead..LOL!

>evidence. One way is to photograph him on

>his boat with a telephoto lens. At the same

>time a recording must be made of him illegally

>transmitting. It may be difficult but it CAN be

>done.

LOL,,,,neat approach,,,but incompetent, not unlike all you do and touch,,the impotence you demonstrate in attaining anything remotely associated wth my life been neatly illustrated for several years by your chubby illegal self.....LOL! But, hey,,I'll even pose for ya' with mic in hand since the jealousy you demonstrate concerning my life now controls your waking moments, free time, weekends, and all day weekdays into the night...LOL. I usually launch from the same site each Saturday and Sunday. It's not a private launch either, parishioner (Hyuk! I KILL me)...LOL Take your picture with me having a mic in my hand...I'll pose and you can admire and wish you were me and snap away all you wish and go home and when your wife sees the pictures she''l leave you and come searching for the "stranger" you turned not only her onto, but the world,,,,LOL! Oh, wait a sec,,she's already gone, isn't she? My bad!. I'm used to being filmed,,almost every trip I end up being on someone's video for posterity, you should be allowed to worship me via your own pics, as well. It doesn't: A) make your word true that your audio recording took place WHERE you claimed it did, B) prove that the audio belongs to the person in the picture you claim it does, and C) necessitiate the FCC pay any attention to the likes of yourself..ha!.Your posting history on usenet is your own worst enemy,,it's why you are reduced to cowardly pseudo-anonymous potshots,,,cause you're reputation as a hammie is fecal mattered content...LOL. Lids like you would never be accepted into the official observer's program via the ARRL.....it's why you yearn for a position of authority, no matter how little,,,sort of like penis envy..ask the hypocrite Hall to edumacate yourself on the term, he claims to be a disciple of such theories and studies. Such patrol activities by observers are reserved for encroachment upon hammie bands. That you would attempt to use such channels for personal resentments due your low self esteems and personal inadequacies illustrates the same harassing nature you demonstrated by including the ARRL moniker in your sig (that

you were since convinced it would be in your best interest to drop it,,,you're welcome).

>If you have a boat and are in the Tampa Bay

>area, we need your help.

LOL.....of course you do. In fact, you need all the help you can get,,you're impotent, Such recognition of the fact is a first step toward recovery,,,now,,,perhaps you can address the mild retardation and communication deficit you exhibit on a daily basis...or perhaps not,,,,perhaps you have not the stature nor the fortitude needed for proactive toward anything in life....in several short years, you have trashed your call sign and the rep that goes with it, you have sullied folks outlooks on you that priorly were your allies,,,,,no, you are incompetent when it comes to anything,,,,you can only be a REACTIVE mouthpiece for yourself, as the hammies can't stand you and the cbers make you look like an idiot,,,as you adeptly illustrate.
Lelnad mad.
Geogre insane.
Some things never change.

>To Direction Find (DF) Twistedhed's illegal CB
>transmissions, set your receiver for 27.555

>and your GPS for these coordinates around

>Tampa Bay:

>The Ice Box is a large area that starts about 8

>Nautical miles west of Casey Key and 10.11

>miles at a 209° mc from New Pass. He is

>sometimes in this location.

Casey Key? Man, you must have found some ancient mariner's site on the web,,but I don't mind, it illustrates your incompetence and impotence. Better make a few hundred more posts ranting about me. I don't think anyone frrom Tampa likes you well enough to help you with anything. You're bossy, rude, arrogant, and spineless. Wait a second, nobody ANYWHERE likes you enough to help you with anything,,LOL..,that's why you;re a lousy hammie living in some obscure corner of the internet...LOL.... behaving like you just had your clock cleaned,,wait,,you DID have your clock cleaned,,LOL,,,,revelation upon revelation..

>Cuda Hole GPS: 2714.398 - 8245.326:

>This ledge is called Table Rock and is one of

>many in the Cuda Hole area that he goes to

>often.

LOL....not even close at all, but, Hey, I'll tell ya'',,all ya' have to do is ask,,,,I'm an open book for those that suffer no communication deficits and mild retardations but who still manage to remain impotent, hostile, and obsessive. Think about it.

>Gully Loran C: 2715.002 - 8246.890:

>Another large area with ledges he fishes at.

LOL...."large" isn't the word,,,,,you aren't familiar with GPS readings at all pertaining to the nautical world.,,but i don't mind, it adds to your collection of incompetence.
Perhaps the Hypocrite HALL has some offerings on Loran readings,.HAHAHAHAHA!

>259° mc for 10.29 miles out of New Pass will

>put you in the area that Twistedhed frequents.

Wrong way.......

>Swiss Cheese Loran C: 2712.031 - 8254.902:

>This is a hard bottom area.

Peculiarly absent from your semi-inaccurate claims are depths,,I wonder why,,,,,LOL!
Second hint: Get some help from someone who knows what they are talking about.

>A 250° mc for 18 miles out of New Pass will

>get you started on locating him.

Locating me? LOL,,,hell, you can't even find the ten meter band,,,even if you could, you;re not allowed to talk there,,,,LOL!

>Old Barge GPS 2709.694 - 8253.053:

>The Old barge is very old

Love that intellect (lack of)...,,,(,ROAR!).

>and in 80' feet of

>water. A 249.6° mc for 17.69 miles from the

>New Pass sea marker is the Rang & Bearing.

>This is a Twistedhed favorite.

LOL.....let's recount. You first claimed on Friday that you wished to tape me. This was shortly after KC8LDO was made undoubtedly aware a tape exists on him down by the lake when he was breaking federal communication law. Hmmmmmmm.
Faced with hypocrisy, humility, and inner rage, KC8LDO felt the immediate need for some type retaliation from HIS breaking the law and

being discovered. Saturday, "you" returned with the same want so bad that you just had to claim success in light of all your shared failures to soothe your wrecked psyche and damaged ego.,,,sort of like Busch claiming one thing then doing another. Hmmmmmmm.
After years of KC8LDO's repeated failures over and over and over and over, after threats from Lelnad that I was a "dead fish" (that had him sacked from is ISP) his claims that I was TOSed, his countless cries and lies and sobs and blames about how his life is wrecked and how it's all mean 'ol Twisty's fault,,,,and suddenly, you, who has met with years of failure, and who must now attempt to HIDE his hammie identity because you are ASHAMED of your behavior, suddenly meets with success in less than 24 hours?
HAHAHHAHAHHAHHAHAHAHAHAHAHHAAHHAHAHAHAHAHAHAHHAHAHAHAHAHAHAHAHA! Send it to Riley, oh impotent one! LOL
You return not only with a "tape" of me, but with exact coordinates of where you profess I frequent? Hyuk,,KC8LDO MAD! GEOGRE insane! LOL! Nice pair! They oughtta get married,,haha!

>Point of Rocks GPS 2714.224 - 8231.829:

>Warning, this place has large rock just under

>the waters surface for some ways out from the
>beach. Be careful, Twisty may try and run you

>aground if you get too close.

If you want exact Loran readings, book a trip with me. Then, and only then, would you have an air of credibilty that has escaped you an entire lifetime....hahah!
You will need to provide a valid phone number and valid credit card with a limit that exceeds your current $250.00 secured deposit and I'll book you for a half-day and will supply everything you need. Incompetence, which I trust you can not shake, is up to you. Considering the years of illustrated experience of incompetence and impotence here on rec.radio.cb,, surely a few hundred bucks is worth attaining the information that has embarrassed and eluded you for years. You know,,,,the information responsible for you wetting yourself, menstruating in public, mumbling and drooling on yourself while curled in a fetal position...the stuff that runs your life and renders you incapable....personal information about your deity "Twist!".....LOL.
C'mon Geogre and Lelnad,,,,,,let's do the twist! Getting on down from the sandpile! (snicker). You're roo-ind! AHAHAHAHA!

WA3MOJ supplied the nervous laughter with:
>`haha!

>Hahahahahhahahahahahahahahahahahah

>ahahahahahahahaha That is way way too

>funny let me know how it goes ...lolololol

It went great. Talked skip all weekend long from the boat and tagged TWO ng regs,,,,,,,Sierra Tangos kept me company ALL morning Saturday,,,talked to the Bering Sea at 4:30 AM on a barefoot radio on SSB. Talked to the Isle of Wight shortly after. The local states came in and south Jersey was in then your neck of the woods came in for a good solid hour..wall to walll,,,,,got LOTS of flowers on my kick-ass audio,,,wished you could have heard me,,,,wait a second,,one of you claimed you DID hear me,,,,,,and only 14 hours or so after he said he would,,,,,,,LOL! And of course you,,,well,,you did nothing but post here all weekend.....I feel for ya' George, I really do,,,sitting here staring at the screen all weekend,,,,,hat's no life, my friend, it's why I can't stay mad at you,,,you really don;t know any better..your cursing tantrums and hostility and continual ad hominems toward anyone that dares diasagree with you, and your constant paranoia with cb rules and your atrocious spelling, all compiled, illustrate just how child-like you really are, and one can't stay mad at a child too long,,,,,they're too cute when they're mad.

Source record: 164017

Gee, Lelnad, this is your forge that had your Bignet account
pulled....that's why the post doesn't exist at all anywhere in any
archives,,,it exists only in the body of your posts... Or was it one of
the other four acounts at the time? I forget, as you had so many pulled
for forging...I could always go into my files and post them all, if you
really need to see them or feel the need to shift into that denial mode
that brings that familar feeling you are familiar with,,,,magnificent
failure.
Oh, concerning the sig,,,,,gee,,,you got me there, Lelnad....(smirk)!
Yea,,you were the only one that used the term.
The entire group is aware of your fetishes concerning an affinity for
mens testicular wear. Ring "Jock" throgh google in this group, and its
to be found only iin your posts several hundered times,,,,that's a lot
of anger and a whole lotta homosexuality, and I know you prefer to
worship and dote on myself, as I am your entire world, but not everyone
elevates me to the status you have, Lelnad. Not everyone likes to here
about your personal problems and how I am responsible for wrecking your
marriage, reputation as a hammie, ego, self-esteem, and psyche...LOL!
Only you and a few select vermin feel the need to share your mild
retardations with the world,,,of course,,I don't mind at all, as you
very well are aware,,,,,,I'm not the one representing myself as a member
of the ARRL while forging cbers on usenet. That's a whole lotta anger
and ire, Lelnad,,LOL!

If you want a license free handheld, you will be much better served with either a MURS unit or (in a city) perhaps an FRS unit. MURS offers much higher power (2 watts) than FRS and the antennas of either MURS or FRS are *far* more efficient than a handheld 27 MHz unit. Check out google group MURS_OPEN and ask them.

Twist, you made one slight error. You state that the continuous rants won't change a thing. I would point you to your more correct observation that this is continuing to blacken the eye of amateur radio. I have seen what a few dedicated folks can accomplish (actually, mostly the effort of a group owner). In just a couple of months, he has taken a beginner group of SWLs, CBers, and other interested folks and the group has grown to over 250 people. Every week sees several new licensed amateur radio operators. Upgrades. Generals, Extras ... it is really encouraging. What is killing us are the actions of a few. You and I both know there are both CBers and Amateurs who have a blend of different people. Some are squeaky clean, totally legal operators. Some push the envelope (2 KW amateurs, 25 watt CBers). Then there are some from each group with a definite love of profanity, overmodulation, and just about anything else one cares to have. Without enforcement, both groups will have more of the problem children; what we don't need are people painting everyone on the 'other' side with a wide brush. No one will stop every violation by himself; however, a lot of damage can be done by an individual trying to flame everyone in a newsgroup. I hope the some of these flamers can calm down before even more damage is done. BTW, I hope no one ever video tapes you operating on that fishing boat and finds out how little power you're actually running - it could ruin your reputation around here :)

President Lincoln, Sold by and radio work done by Bills 2 Way. Radio is a 8 on a scale of 1-10 due to some light wear around knobs that doesn't effect the ability to read the lettering at all. All lettering is 100% intact and radio works 100% Sold as is, has channel conversion done and comes with box, original mic, mounting bracket and user manual. Have made many long distance DX contacts on this radio and have recently upgraded to a Kenwood so its time to pass this radio on to someone else :) Actual shipping costs will be calculated at end of auction to your door. Please ask all questions before bidding and good luck :)

Hi Bert!

Glad to hear that this was a worthwhile experiment. That was always the
best part of CB for me, the experimentation factor. I wish more people
would play with their receivers, rather than the transmitters. It'd be a
whole lot cleaner out there.....

Have you done any parametric testing, or has all of your testing been
subjective, on-air stuff? I'd love to see some hard data, on the degree
of improvement over stock.

Is this practical? Well, you certainly could get a ham quality receiver, which would probably do it a bit better, for only an incidental increase in price. But you wouldn't have the satisfaction of saying "i done it".

The question of legality is also interesting. On the one hand, the FCC takes a dim view (I.E. it's usually illegal) of ANY mods to a type accepted radio. In practice though, it's usually the transmitter that they're most concerned with. You could always use one modded receiver for receive, and another unmodded radio to transmit, and that would be legal.

I know there are a few people out here that need radios fixed. Do you have a bunch of broken radios?
If they are complete, I will fix the radio of your choice for free if you send me the rest. $45 for a single radio repair including most parts + shipping.

Im interested in mostly export and AM/SSB radios, base or mobile. I know this sounds like a commercial, but I do this as a service to the radio community like others out here. So if you are interested, let me know.

Not your frequencies and you are part of the problem, not the solution. You are reactive and not proactive,, making you impotent and othing more than a troublemaking lid. I'm also on authorized frequencies. Your deficit in communication is responsible for your misinterpretation of Jim approving of freebanding. Or perhaps it is your mild retardation.

>.......what kind of ham are

>you that gives approval to a bootlegger?

Ahh,,,I see your contorted view manifiesting due the mild retardation you exhibit and suffer,,,,LOL.... Because you are unable to hold intelligent conversation with those that hold differing opinions (that deficit you suffer from), those that ARE able to do so are construed by yourself as being in cahoots with, or expressing explicit approval of the one they can converse with. You have a learning disability as well, Lelnad.

2509. WA3MOJ admits hassling rec.radio.cb with ARRL REP KC8LDO

Newsgroup: rec.radio.cb
Date: 2003-08-19 13:32:55 UTC

Keep telling yourself that..,,you always feel the need to share your
problems.

>threatens to use Leland,George and Dave

>Halls callsigns on the freeband....

Never happened.
N3CVJ Hall not only breaks the law, but admittedly
gives advice on how to circumvent the law. When it applies to anyone
else obeying the rules he sets himself above, his yellow stripe becomes
visible. N3CVJ freaked when I illustrated his blatant hypocrisy.
He also made a post not too long ago concerning the pleasure he receives
from ilegally monitoring cordless phones listening to teenaged girls
talk about sex .
THIS is Dave Hall's life......yet you hold my freeband barefoot,
courteous, radio activity as somehow worse than Hall's exibited penchant
for pedophilia and selective application of FCC rules across the
board,,,again,,I violate one single rule selectively,,the DX rule. It is
just like your ilk to defend such actions,,,,"Birds of feather" I
believe WA3MOJ said....

KC8LDO, we can't forget how he came into the fold...he lost a debate
with me that illustrated his anger way back when,,,,he harbored
resentment for being shown the liar he is. AS all can remember (or check
google) KC8LDO demanded and stomped his foot for days and days for me to
"follow" his lame ass into a hammie forum to speak to someone he claims
is an authority on FCC rule. When I refused,,he forged me there and was
busted and called on it by the late N0BK. He also forged Train in there
at the same time. KC8LDO lost 4 accounts in less than a month and I have
ALL the emails from the ISP's telling me appropriate action was taken at
the same time Lelnad lost his accesses.
Flash forward to the more recent. KC8LDO went wild on anyone who dared
discuss N8WWM getting busted on the RAINREPORT. He defended N8WWM for
days upon days, denying the mans involvment, let alone guilt, for
jamming the repeaters. KC8LDO attempted to get this group to believe HIS

word over the FCC's. More recently and keeping with his latest assault on hammies and the ARRL, he is posting forges and ad hominems while intentionally representing the ARRL,,,KC8LDO LELNAD C SCOTT,,,,,nocode of the moment!
This, is your life, Lelnad C. Scoot.

ANd WA3MOJ,,well,,,,,Geogre can not be taken serious about anything. AS Dick said,,"He's simply insane"

>you remain silent. When Twisty threatens to

>report people to the FCC for incorrect

>addresses....you remain silent.

Tut-tut..he remains silent when you cry and get reactive about cbers breaking the law , also. You have no point other than the one atop your greasy head.
I threatened to report no one that didn't come needlessly gunning for myself, Besides,,if you folowed your own hypocritical lid advice, it wouldnt matter, now, would it,,you claimed "If you have nothing to hide, you have nothing to fear",,see,,but Geogre and Lelnad don't live where at the addy they supplied the FCC. I understand it may take several months, but the database is being looked at.

>But as soon as ole Twisty starts taking some

>hits,

AlI feel is air from the strike-outs. "Hits?" None of those sucker punches have a target they even come close to,,,,you're the only one that feels otherwise...LOL..keep telling yourself that and keep repeating it..... Let's see,,I am on the same ISP,,,you are not. I have had the same real email addy for years.,,you haven't had one for a week. Even the hammies are against you, but then again, if they weren't, you would have no reason to be hiding and attempting to suckerpunch from the shadows.

> you start preaching about "the bickering

>blackening the eye of amateur

>radio".LOL!!!!

>Can you spell B-I-A-S-E-D? Course you

>can.....

O course he's biased...against lids like yourself that wreck hammie radio for everyone,,it's why you're in the mess you;re in , Lelnad.

Hi,

I have a Motorola FRS (I am very happy with it) but it would not be what I want in case of emergencies: I would need something which the police would monitor so I could call for rescue if needed, I would need something which would, for example, make it possible for me to ask for the road conditions ahead, or simply monitor the channels used by trucks and other to be aware of what is going on. The situation I am most concerned about would be a massive evacuation of the Florida coast in preparation for a hurricane.

Even the NOAA hurricane evacuation kit suggest the purchase of a handheld & battery operated radio!

what do you think about these two models: the Cherokee AH-27F and, in particular, the Midland 75-822 - both found here:
http://www.alfoutdoors.com/cbs/handheld_cbs.htm

Can you think of better models?

Thanks!

Good luck. There may, or may not be someone listening to channel 9.
Since it's usually quite busy with non-emergency traffic (at least around here) it's most likely that nobody's listening that would be useful to you.
For example, our county EOC has a CB set, it's been powered up in tests a few times in the last few years, but nobody listens to it routinely.

Our police don't monitor CB at all. Highway patrol <MAY> monitor, but I wouldn't bet on it.

You might come by road info on channel 19, but that info may or may not be reliable.
I've heard bad and deliberately misleading info passed from time to time.
I put one in the car on long trips just for that reason.

> Even the NOAA hurricane evacuation kit suggest the purchase of a
> handheld & battery operated radio!

They are talking about AM/FM receivers, for official information broadcasts.

I would think that a few weatherproof FRS radios, with a good block of spare batteries would serve well.

A long range radio, with just a few channels, is going to find very congested conditions.
A short range radio, with fewer channels, is likely to be very usable.

Thank, Dave. I was never into power increasing or freq. expansion mods,
however, I too am not without sin. More on that later. 0:-)

> Have you done any parametric testing, or has all of your testing been
> subjective, on-air stuff? I'd love to see some hard data, on the degree
> of improvement over stock.

No, I haven't...which is pretty much why I had SGC perform the installation
and testing. After speaking with the folks at SGC, I knew that they had the
equipment to not only get it done...but "get it done right!"

> Is this practical?

Nope, but that was part of the allure.

> Well, you certainly could get a ham quality receiver,
> which would probably do it a bit better, for only an incidental increase
> in price. But you wouldn't have the satisfaction of saying "i done it".

Exactamundo!

> takes a dim view (I.E. it's usually illegal) of ANY mods to a type
> accepted radio. In practice though, it's usually the transmitter that
> they're most concerned with.

I take a common sense approach. While I'm reasonably certain that the
receiver mods are 100% legal, I do have an on-board speech processor
installed. I use the SP-1a and I'm very pleased with the resulting audio. I
could've gone with Astatic's external model, but since even the addition of
an amplified mic can (and has) be arguably construed as a modification to
the type-accepted transmitter section, and thus technically illegal, I chose
to apply a little common sense here as well, Thus the rig is clean, clear,
and I'm quite comfy operating it at it's whopping 12 Watts P.E.P. (What's
AM?) HOWEVER, a stock Grant LT also sits right next to it. ;-)

> You could always use one modded receiver
> for receive, and another unmodded radio to transmit, and that would be
> legal.

Truth is, I'm one of those folks who listen 99.99% of the time and transmit
the other 0.01%. Except between 7.1 and 7.15 MHz on the Novice/Tech"+"
sub-band. Tryin' to get my "key" on. :-)

Take care and thanks for the comments.

The truth has always been my friend,,,,look at to what depths it has
reduced you to posting. Truth, is Hall makes posts concerning minors and
how he gets his jollies listenting to them talk about sex. Truth, is how
you defend such actions.
Truth, is Lelnad forging many of us and getting caught and having his
accesses yanked over and over. Truth is Leland telling the world how the
FCC was wrong and how he was right concerning N8WWM jamming repeaters.
Truth = Geogre is insane, Lelnad is madd, and Hall is a hypocrite.
Very simple.

Wrong. You bootleg on "freeband" frequencies. Too bad the truth wont go
away huh twisty.

_
>Plus he uses an illegal radio to talk thier so his
>attempt to lie is once again brought to light.

LOL,,yea,,,my ten-tec is really illegal,,not. I own many radios. Unlike
yourself, because I mention a single brand, doesn't mean it's all I have
or use, but attempted education of an insane person is useless. But
let's run with that, Geogre,,,,my Galaxy freeband activity is so much
worse than N3CVj's admitted fetish listening illegally to cordless phone
conversations of underage teeney-bopper girls talking about their sexual
experiences to each other...yes, Geogre,,,,,you indeed claimed birds of
a feather flock together,,,and your continued attempted persecution
(self-admitted with your choice of word concerning me getting "hits") of
another for freebanding on a galaxy radio while defending and condoning
acts that reek of pedophilia is what we are beginning to expect from
yourself, Geogre, Go on,,tell me how bad my acts are in comparison to
this lid,,or to KC8LDO's utilizing the ARRL in his sig while abusing the
ARRL's observer program to harass cbers that he has severe personal
problems with and who illustrate his deficit in communications.
Lastly,,your preference at holding freebanding barefoot skip as an act
worse than N3CVJ's shared sexual deviations, coupled with your own use
of seual connotations as frequent insult, illustrates you aren't all
that far off from him.

2523. Re: It has been deathly silent so twirthead

2526. Volunteers Needed To Locate Radio Pirate, Tampa Bay Area

Newsgroup: rec.radio.cb
Date: 2003-08-19 19:36:46 UTC
From: maketwistypay@yahoo.com
Message-ID: <12f0139b.0308191136.5319fa05@posting.google.com>
Source record: 164109
Cross-posted to: rec.radio.cb,alt.fishing,rec.boats

(rec.radio.cb,alt.fishing,rec.boats.crusing,rec.boats)

This Saturday, August 23, beginning at 7AM EST, at least one volunteer boat will be cruising the Tampa Bay area in order to gather evidence of an alleged pirate radio operator. His name is unknown, but he goes by the handle of "Twistedhed", he is an illegal radio operator who encourages others to do the same.

If you have a boat and are in the Tampa area, please join us in our effort. You will be helping to contribute to the public good. Such "radio pirates" often interfere with health and safety communications and emergency transmissions. The purpose of this Saturday's activity is to gain evidence to get "Twistedhed" busted for his freeband violations by the FCC office in Tampa.

There is reason to believe "Twistedhed" may hold an amateur license. If so, his penalties for operation on the "freeband" could be very severe. Last fall the FCC tracked transmissions on 27.535 MHz to a residence. The offender initially faced a $17,000 fine. This month alone, FCC special counsel Riley Hollingsworth sent enforcement letters to amateur licensees in Georgia and California regarding unlicensed operation in and around 11 meters.

If you have a boat and are in the Tampa Bay area, we need your help.

To catch Twistedhed on the freeband and get him "FCC busted", we will need to have solid evidence. One way is to photograph him on his boat with a telephoto lens. Get the boat's name and reg. number also in the photo. At the same time a recording must be made of the operator illegally transmitting. It may be difficult but it CAN be done. This method has been proven successful by hams in North Carolina for catching illegal truckers on 10 meters.

Be advised this is NOT stalking or harassment, simply a legal effort to gain evidence and merely OBSERVE a crime being committed. These are PUBLIC waterways and ALL boaters are permitted to be there. We urge you NOT to confront Twistedhed. Leave that to the FCC and the courts. You are just there to gather evidence.

You will need a CB or shortwave receiver capable of receiving 27.555 mhz.

You will also need a LORAN or GPS.

We have confirmed these coordinates around Tampa Bay as "likely" areas
that he frequents:

The Ice Box is a large area that starts about 8 Nautical miles west
of Casey Key and 10.11 miles at a 209? mc from New Pass.
He is sometimes in this location.

Cuda Hole GPS: 2714.398 - 8245.326:
This ledge is called Table Rock and is one of many in the Cuda
Hole area that he goes to often.

Gully Loran C: 2715.002 - 8246.890:
Another large area with ledges he fishes at. A 259? mc for
10.29 miles out of New Pass will put you in the area that Twistedhed
frequents.

Swiss Cheese Loran C: 2712.031 - 8254.902:
This is a hard bottom area. A 250? mc for 18 miles out of
New Pass will get you started on locating him.

Old Barge GPS 2709.694 - 8253.053:
The Old barge is very old and in 80' feet of water. A 249.6? mc
for 17.69 miles from the New Pass sea marker is the Range
& Bearing. This is a Twistedhed favorite.

Point of Rocks GPS 2714.224 - 8231.829:
Warning, this place has large rock just under the waters surface
for some ways out from the beach. Please be careful. We make
fun of Twisty but the truth is that he IS a pirate operator, which
means he does not recognize the laws of the USA, so he may
try and run you aground if you get too close and he sees that you
are attempting to surveil him in the act of freebanding. Please
use CAUTION at all times.

Please send all tapes and photos to maketwistypay@yahoo.com.

WOW Twist didnt take you long to reply huh under 10 minutes?

"Twistedhed" <twistedhed@webtv.net> wrote in message
news:22292-3F426F18-470@storefull-2316.public.lawson.webtv.net...

>It has on my end you dick with ears...

No,,it hasn't,,,you made obscenity-laden posts all weekend long.
****

Yes these 4 gems by me constitue obscentity laden posts all weekend long
...hahahahahahaha

1) Hey Jim, Go fuck yourself. You sorry excuse for a ham radio operator
2) Fag, Geek, Scott
3) what did this asshole say ?
4) your an assclown

>You made serval posts directed at myslef several times over the weekend.
****
I didnt make any posts over the weekend directed at you your either confused
or fucked up in the head. I say both.

When I returned on Mon,,you were on my replies within ten minutes,,,
****
Absofuckinglutly I replied i got online in the afternoon read your
accusation against me
and posted a reply, sorry it may have been after you posted them in fact I
am taking your word for it that they were 10 minutes behind.
I replied to defend myself from your false accusations, baseless claims and
after
you made the posts, now I am to be blamed for the timing of your posts and
when I reply. haha
Keep changing the subject by your obfuscation

LOL,,,look inside yourself,
****

Here look inside my asshole when you crawl out...

I called you no name, Geogre.
****
Your childish names and name calling has been noted try to keep up

LOL,,whattya mean not you?
****
What part dont you understand?

Your IP this weekend matches the same one you gave your call sign with.
****

Really which one is that? Post it..
If it isn't the same one I am posting with now, you just made your self
look like a jackass, well more so than usual.

You're lying Geogre,,,,many posts were made by
you this weekend,,,MANY,
****

Exactly I made posts over this weekend. Not one of them was about you
or directed towards you, does that make you feel less important.
If you have some proof snip all the other bullshit from these posts and
repost just 1 post I made about you with my ip address fully intact,
you know the comcast one I have used for the past 2-3 years.

>For some reason he also thinks I teamed up

>with Leland against him... hahahah Your not

>worth as much time as they spent on you

>dickface, and if your too stupid to recognize

>who it is

This group didn't need your admission of involvement, Geogre
****
>Nor did the group need your false accudsation
>and innuendo.

Not false,,
****

100% False I never made any posts about you this weekend, now you have 2
choices
POST PROOF or STFU, pretty simple.

Need to see the forges of cbers by the self-professed rep of
the ARRL, KC8LDO?
****
Listen you dumpster diver I want to see PROOF of me posting about you this
weekend, enough of your hersay and constantly trying to change the subject
to someone or something else. Lets stick to the one on hand. Where you have
Lied about me posting about you this weekend.

Need to see the post by N3CVJ where he admits delight
in breaking federal communication law to get his sexual jollies from
underaged teenaged girls?
****
Off Topic, unrelated and pure attempt at obfuscation on your part.

Need to see your own contradictory post where
you claimed you KNEW it wasnt' Lelnad,..?
****

YES<YES<YES YES<

Or you need to see the one
today where you attampted to clean up your messed Depends where you
claimed you don't know for sure? LOL,,the only thing we know for sure,
is you lie,,,continually...and curse.
****
Just because you say it doesnt make it so.

The collective group.
****
You speak for the group?

>about impotent. Now go wash off you stink like
>baccala

Your imitations and outright plagiarisms are downright indicative of the
power you insist I wield over you.
****
who did I imitate? someone else call you a baccala before? I should have
known.

When can you post with a real email address?
****

why you wanna email me something or just being nosey?

Oh, excuse me, lids can't
display such items..they have their hands full enough with the address
issue coming down,,,LOL.

Wrong. You bootleg on "freeband" frequencies. Too bad the truth wont go
away huh twisty.

_
>Plus he uses an illegal radio to talk thier so his
>attempt to lie is once again brought to light.

LOL,,yea,,,my ten-tec is really illegal,,not.
****

LOL. NOT wrong again on the freeband and CB Band your radio is illegal.. LOL
too easy

I own many radios. Unlike
yourself, because I mention a single brand, doesn't mean it's all I have
or use, but attempted education of an insane person is useless.
****

Real easy question name one radio that is legal on the freeband?
Go wash off again!

But let's run with that, Geogre,,,,my Galaxy freeband activity is so much
worse than N3CVj's
****

Yes you are right it most certainly is, that may become a new sig file

admitted fetish listening illegally to cordless phone
conversations of underage teeney-bopper girls talking about their sexual
experiences to each other...
****

Off topic

and your continued attempted persecution of
another for freebanding on a galaxy radio while defending and condoning
acts that reek of pedophilia is what we are beginning to expect from
yourself,
****
Who have I condoned and defended?

Geogre, Go on,,tell me how bad my acts are in comparison to
this lid,,
****
Yours are Illegal by FCC Rules

or to KC8LDO's utilizing the ARRL in his sig while abusing the
ARRL's observer program to harass cbers that he has severe personal
problems with and who illustrate his deficit in communications.
****
I have no knowedge of anything Leland has done all hersay on your part.
what is the observer part you speak of? leland is an OO?

Lastly,,your preference at holding freebanding barefoot skip as an act
worse than N3CVJ's shared sexual deviations, coupled with your own use
of seual connotations as frequent insult, illustrates you aren't all
that far off from him.
****

Your acts are self admitted and illegal. You also have used an amplifier,
and god only knows what else.

ANd WA3MOJ,,well,,,,,Geogre can not be taken serious about anything. AS
Dick said,,"He's simply insane"

>Fuck you and fuck Dick McCollum,

Not me,, friend. I'm heterosexual, and if you attempt it witt Dick,
you're homosexual and a necrophiliac. Ring "jock" through google in
rec.radio.cb and note that it comes up only in KC8LDO's posts,,.the
nocode fixated on mens testicular wear in a radio group and who
represents the ARRL,,,LOL,,,,,,he may accept your offer.

>I wish it was you instead of him pushing up

>daiseys

LOL...that's no surprise..you have been beside yourself and haven't had
a clue since I have been pointing out your self-contradictions and
unfounded attacks full of colorful obscenity.

_
,but Geogre and Lelnad don't live where at the addy they supplied the
FCC. I understand it may take several months, but the database is being
looked at.
****

>Really? And you know this how?

>Same way you claim firsthand knowledge of ARRL represenative KC8LDO
>screwing up the group,
****

I never once made any kinda remark even closely resemb ling that.
Another lie on your part and a purposful attempt to put words in my mouth.

>Please tell me where I live jitlip?

You make the incorrect assumption I somehow care.
****
You do otherwise the statement about the FCC database and addresses
wouldn't have been made

> Ohhh shucks we will have to wait several

>months?

(shrug) Depends what Riley decides to do.
****

No you said we will see lelands name on the rain report are you back
peddling?

He may brush it aside.
****

Why if it is any type of violation why would he?

He may just send you a letter,
****
I will bet you I don't get a leter from riley.

but I think he was advised, as a federal agency, to check with another
federal agency where your monthly
disability checks go,,,,,chances are the address they are mailed to is your
real address

****

LOL too funny first I thought you didnt care about my address? LOL see
above.
2) I am not on disability, you fool i work everday unlike you.

> LOL yeah ok

Who's laughing now? LOL...
****

I am laughing so hard you can't imagine... ROFLMAO please stop it is making
my sides hurt

Let's see,,I am on the same ISP,,,
****
>So am I dick face

You lost web2news same day Lelnad did. You going to deny it, Geogre?
****

Yes I have never ever had web2news, I told your stupid ass that before. Your
to dumb to realize

The lies were initiated by yourself, the moment you became nervous. You
alluded to how quiet it has been over the weekend,
****

Just because you can't understand dontt put words in my mouth, I didnt say
it was quiet in here over the weekend, I said it has been quiet in here
lately. You assumed what you wanted, I never alluded to that thats your
brain storm.

Message-ID: <WgGdnSsKZP1BAN-iXTWJiA@comcast.com>
Source record: 164118

Hey Cool Breeze seems like you have made the unfortunate acquaintance of the group's resident "punch-clown" A.K.A. Twistedhed. As you can see he does make a big deal out of news group headers, IP addresses etc. Fact is he doesn't know squat about any of it. Just keep pounding him with demands to provide "PROOF" of who was using a particular IP address or account. The only proof that shows anything would be a note from the ISP stating that "so-in-so" was using "such-in-such" address at time "T" on date "D". And that proof he isn't going to get, from anybody. Releasing that information to anything other than a law enforcement agency would be a violation of USA privacy laws. And for the law enforcement agency to get that info they would still need a court order.

Twirted doesn't understand the concept behind dynamically assigned IP address, anonymous re-mailers, and blind ended accounts. His usual method of operation is to post a header then claim it came from so-in-so because it has the same domain as so-in-so's post. Of course he doesn't understand that several hundred thousand to several million people likely use that same ISP so it not unusual to find more that one person using different names but originating from the same domain. Some services use dynamically assigned address so it is also possible for two or more people to end up with the same address at different times and dates. For the chucklehead Twirted he has assumed that these people are one in that same, for either or both of the above cases. For the anonymous re-mailers he can't understand the idea that the path shown in the header for the message origin is crap. That path doesn't mean a thing. If it did then the service wouldn't be "anonymous". In fact some of those services send their messages through other anonymous re-mailers to make it very hard for any one to trace the message origin even if one should be able to get a hold of the real log files for a given service.

So go ahead and hammer him to provide "PROOF" and
that it is verifiable, then sit back to watch his
show of change the subject, dodge the question, or
just plain get mad where he says it true just
because he says so. But don't worry. He'll never
be able to prove anything. In case you haven't
already noticed most long time posters on the
group don't even bother him for proof anymore
because they're tired of him not being able to
provide any. They just ignore his wild claims.

Jim he is on freqs not authorized to him.....what kind of ham are
you that gives approval to a bootlegger?

>would you mind showing proof where twistie

>did the things you say he did????

_
hey gw, I know your not real bright but twisty admitted in a post today
he freebands on un authorized freqs.
What else do you want a signed confession?

_
No. An answer to his question would be nice.
See,,,,you are so dangerously close to spinning this, you;re probably
constipated...I admitted freebanding on 27 MHZ. Barefoot. I do not talk
unauthorized on any hammie freqs like KC8LDO has attempted to claim on
several occasions. In fact, watching your communication technique, along
with all of Voobsies named faves, I am without a shadow of doubt
absolutely certain I am a more respectful operator than you or Lelnad,
and I most certainly violate less laws than N3CVJ has admitted breaking.
See, I talk skip,,,on 27 MHZ..which you already claimed is worse than
your pal's self-admitted pedophilia....end of story, and of what little
was left of your stained hammie reputation.

Ummmm - not to be picky here, but you don't need a license for
11 meters.

If you mean over power regs, well, then you'd have to capture
and fine every single CB sidebander from here to Afghanistan.

Later,

Tom

>Wrong. You bootleg on "freeband"

>frequencies. Too bad the truth wont go away

>huh twisty.

Truth is my friend,,,Truth is N3CVJ breaks federal law to get his kicks
listening to underaged teenstalk about sex.
Truth is Lelnad forging cbers in hammie rooms.
Truth is,,,you're insane.

>Plus he uses an illegal radio to talk thier so his
>attempt to lie is once again brought to light.

LOL,,yea,,,my ten-tec is really illegal,,not.
****
>LOL. NOT wrong again on the freeband and

>CB Band your radio is illegal..

But YOU claimed I use it there,,,not I,,,just like all your other
claims,,,,,all lies.

>LOL too easy

Sure is,,,especially when broken down and confronted with your own
contradictory statements and accusations.

_
I own many radios. Unlike
yourself, because I mention a single brand, doesn't mean it's all I have
or use, but attempted education of an insane person is useless.

****
>Real easy question name one radio that is

>legal on the freeband?

But I'm not the one crying about the freeband law,,you are.

>Another easy question

> Go wash off again!

LOL,,your imitation and outright plagiarism illustrate how much you have
come to need and depend on me.

_
But let's run with that, Geogre,,,,my Galaxy freeband activity is so
much
worse than N3CVj's
****
>Yes you are right it most certainly is, that may

>become a new sig file

Yupp,,it just may,,,,,"WA3MOJ claims
barefoot freebanding on 27 megs worse than pedophilia."

_
 admitted fetish listening illegally to cordless phone conversations
of underage teeney-bopper girls talking about their sexual experiences
to each other...
****
>Off topic

But I didn;t bring it up,,,N3CVJ brought it up,,HE mentioned it, HE
posted how much pleasure he finds in such perversions and acts and in
breaking federal communication law. That he is a licensed hammie makes
it all the worse,that you seriously are defending such actions is really
placing you in an ugly light,,then again, you admittted you are of the
belief such acts against children are somehow ok. You really are
insane...touched upstairs. Anyone that defends pedophilia such as you
have done has serious deep-rooted problems.

_
and your continued attempted persecution of another for freebanding on a
galaxy radio while defending and condoning acts that reek of pedophilia
is what we are beginning to expect from yourself,
****
>Who have I condoned and defended?

First,,,Lelnad,,you claimed you knew for certain it wasn't him and you
pulled a Bush-like move and attempted a flip-flop and said you now
"don't know" if it was him, illustrating not only your
self-contradiction, but absent-mindedly admitting, whether you realize
it or not, that you indeed agree Lelnad possibly is a guilty 'nutha
sucka concerning what you originally claimed you KNEW he didn't do..LOL
AND N8wwm,,,you came to his aid when he was popped, just like
Lelnad,,but you backed off faster than Lelnad,,,guess you aren't as
chummy with n8 as Lelnad is, or you just dont want anyone to know. And
just now, you candidly expressed you prefer pedophilia to freebanding
and hold it less harmful,,,,,,twisted, man , twisted. You need help, and
way, way more than the kind we thought,,,,this new revelation of yours
certainly sheds light on your continual and ever-present use of
homosexual remarks as insults.

 Geogre, Go on,,tell me how bad my acts are in comparison to this
lid,,
****
>Yours are Illegal by FCC Rules

So is N3CVj's.

_
or to KC8LDO's utilizing the ARRL in his sig while abusing the ARRL's observer program to harass cbers that he has severe personal problems with and who illustrate his deficit in communications.
****
>I have no knowedge of anything Leland has

>done all hersay on your part.

> what is the observer part you speak of?

>leland is an OO?

What is it? I dunno...ask him,,,,,he's the one playing radio-Kop and representing himself as the ARRL guy in rec.radio.cb to attack cbers that clean his clock on a regular and semi- enjoyable basis.

_
Lastly,,your preference at holding freebanding barefoot skip as an act worse than N3CVJ's shared sexual deviations, coupled with your own use of seual connotations as frequent insult, illustrates you aren't all that far off from him.
****
>Your acts are self admitted and illegal.

SO are N3CVJ's,,you aren't getting out of it, Geogre, ,,,,,,,that you selectively target me to cry about freebadning when there are sexual deviants among your rank and file that admit not only breaking federal law, but laws regarding minors,,,,,

>You also have used an amplifier,

Yes,,,OH MY!! LOL! So has N3CVJ in addition to his deviant behavior,,,,but you are ok with such whackos and their sexual sicknesses, so go ahead and let him around the children in your family.

>and god only

>knows what else.

Exactly,,,but mentioning God while harassing cbers for a true victimless crime (cite a single victim,,,,,,,just one,,and the source, from freebanding activity) is akin to blasphemy, but you don't have God in your life,,it's obvious. And claiming such freebanding activity is worse than your close pal's shared and posted pedophilia activity is a surprise Geogre, but as an email asked me "Are you really surprised?" In hindsight,,I guess not. Way to go, Geogre! We have KC8LDO with his many posted threats of violence and forges of cbers,,we have N3CVJ posting about his off-topic sexual deviant behavior toward children in CB radio room, we have N8 with his porn spamming to the group and his getting busted by the FCC for breaking federal law and jamming repeaters while

Lelnad and you defended him, we have you climbing the walls as you backed yourself into such a tight corner there is nowhere else for you to go, as you telegraph your beliefs concerning importance and severity of the crime...and we have the Voob" man himself that neatly illustrated all the lids in one single post of his,,,,naming the three of you by name and in order...LOL......I think you're right, Geogre,,,your recent revelations may make a great sig,,,,,,.....as always, after you, my insane man.

WA3MOJ seethed and hissed with:
You make the incorrect assumption I somehow care.
****
>You do otherwise the statement about the

>FCC database and addresses wouldn't have

>been made

Again,,,enforcement and the claim of calling the feds was initiated by your little group of lids,,I am merely mentioning the return of the practice.

>Ohhh shucks we will have to wait several

>months?

(shrug) Depends what Riley decides to do.
****
>No you said we will see lelands name on the

>rain report are you back peddling?

No,,I didn't say that at all,,,I asked you if you wanted to wager it,,,,,,,,placing words in my mouth won't make it so,

_
He may brush it aside.
****
>Why if it is any type of violation why would he?

Priorities, Oh, you appear to be under the impression I meant "ignore",,,,LOL,,,,,no, I promise you he will not ignore it. May take some time, but it will be addressed. And that's a twisted promise....how do you like me now? :)

_
He may just send you a letter,
****
>I will bet you I don't get a leter from riley.

If you are who you say you are, I will hedge you are contacted by the FCC for supplying an incorrect address.

_
but I think he was advised, as a federal agency, to check with another federal agency where your monthly
disability checks go,,,,,chances are the address they are mailed to is your

real address
****
>LOL too funny first I thought you didnt care

>about my address? LOL see above.

You too.

>2) I am not on disability, you fool i work

>everday unlike you.

If you are WA3MOJ, you receive disability.

>LOL yeah ok

Who's laughing now? LOL...
****
>I am laughing so hard you can't imagine...

>ROFLMAO please stop it is making

>my sides hurt

Nervous laughter.

_
Let's see,,I am on the same ISP,,,
****
>So am I dick face

You lost web2news same day Lelnad did. You going to deny it, Geogre?
****
>Yes I have never ever had web2news, I told

>your stupid ass that before. Your to dumb to

>realize

You also lied to the group and told them you didnt have AOL but several have shown you do,,you slipped up several times,,its your main reason you have such a hard-on for Sharky,,,,he was the first to prove you had an aol account,,his sharp eye caught your screw up and you never did it again, but your campaign of malice toward him had begun.

The lies were initiated by yourself, the moment you became nervous. You alluded to how quiet it has been over the weekend,
****
>Just because you can't understand dontt put

>words in my mouth, I didnt say it was quiet in

>here over the weekend, I said it has been

>quiet in here lately.

Yes,,and it wasn't quiet in HERE at all,,,you made tons of posts, most of them full of anger and cursing at several, and,Lelnad made a barrage of angry posts,,,,see,,it's your communication deficit acting up again,,has nothing to do with understanding you, and even if it did, you have such a hard time with proper communication technique and effective debate, it's your fault for not having the know-how to properly convey what it is you think you're trying to say.

>You assumed what you wanted, I never

>alluded to that thats your brain storm.

No,,,YOU assumed,,,I KNEW you referred to in HERE when you said it was quiet. It was an outright lie.

Are you for real? You must have too much free time on your hands... I doubt you will find anyone to help you out... How do you know he has a ham license or that he's interfering with emergency broadcasts? Bring a CB that is capable of receiving 27.555? Isn't that illegal in itself? I hope you confront this guy so he pulls out his shotgun and shoots you in the face! Now that would be worth discussing on this board... And what is this about anti Twistedhed yahoo group? What do you have like 2 members? Now that's truly gay... Get a life you asshole!

Rockin! I ripped a rod holder off the grab rail once, in order
to have an air mic when born on the Bayou starting playing
one time. The funny part is my friends never let me forget
it, and that was like 7 years ago.

Great times and friends on the water.

Yeah, well nonpayment of taxes is a
victimless crime and plenty of people
go to jail and get fined for it. I can
assure you it IS possible to be issued
a NAL for "freebanding" and in the case
of one freebander, A.K.A. Twistedhed,
the wheels of justice are already in
motion. If he is a ham, so much the
worse for him.

Oh, but one thing is for certain,
weekends are going to be
quite interesting in Tampa Bay
from now on, one never knowing
if the boat one sees on the horizon
is just another fisherman,
or perhaps someone with
a video camera and radio
scanner collecting "evidence"?
There will always be with one
that little twinge of doubt, that
chilly stab of paranoia.
A conscience which will not
go away is a terrible thing
indeed.

That you have, and thank you for that Mopar.
However Twirted is another matter. I don't post
anything for a few days or a week and he goes off
the deep end posting some of his typical filth in
a vain attemp to stir up a flame war to satisfy
his need for attention. Well he got it alright,
the attention - web pages - Yahoo groups, but none
of it was my doings. I don't mind kicking back and
having a good chuckle at his expense from the
above, but if he thinks coming after me will do
anything about it, well he would do better by
figuring out who is really sticking it to him. So
far he's as clueless as always.

BTW did you get up to the Dream Cruise last
weekend? I was looking for you. If you did I was
one of the people under the twin set of canopy
tents in front of the apartment complex just north
of 12 Mile Road. Believe it or not everything was
up and running by last Friday night early Saturday
morning, shuttle buses etc. Gas stations were all
open, and no lines too.
